MISLEADING-NAME AND PRIVACY WARNING · AUTHENTICATION UTILITIES

Authy names, different publishers. Who are you trusting?

Two more developer accounts flagged for suspected scams and misleading brand impersonation: Appios Bilisim and MAN LI / Shield Apps. Two reviewers say they installed Authly while searching for Twilio's Authy; the separate Shield Apps publisher puts Authy in its title and Duo in its English subtitle. Its 15-app catalog also contains Google-coloured icons and prominent Google/Dropbox marketing. These are separate publisher groups; the documented connections and branding assessments are distinguished from proven fraud or common ownership.

Apple developer accounts: **Appios Bilisim · 1796567865** · **MAN LI / Shield Apps · 1653727587**

VISUAL EVIDENCE

Authly, the real Authy, and a separate app named with Authy

Original Apple icons: Authly by Appios; official Twilio Authy by Authy Inc.; and the separate Shield Apps authenticator by 满 李. Their icons differ. The name and publisher mismatch is the core authentication-app warning; the wider Shield Apps catalog is compared below.

Current app · Appios

LOOK FOR YOURSELF

The screenshots tell the story.

The second publisher's live Mac page shows the exact Authy/Duo title combination. The supplied Authly review capture documents a different app's real name-confusion complaints; those complaints are not attributed to Shield Apps. The expandable gallery preserves original Apple promotional images and the supplied native Authly capture.

Actual loaded US Mac App Store page: Authy in the title, Duo Authy in the subtitle, and 满 李 as developer. Captured13November2026. E41.

Nice try guys
1/5 stars · 2025-03-24 · HazeFDC · US App Store
Looking for the authY two factor authentication app yielded your little scam by cleverly slipping that L into the title and like the fool that I was didn't notice that you are in fact, not the app I was looking for. First red flag is the constant demands to sign up for your service when I know that the property application is 100% free. Furthermore, when I did manage to get your app to work, none of my authentication accounts recognize the codes you were giving me. Only after some digging did I see you quite intentionally and tempted to sneak your app into the top searches so that people like myself who might not have noticed the L in your name would break down and give you money.

While your actions might not be against the TOS it is truly disgusting. Any company that tries to could wink people like cleverly misspelling their company. Well, you didn't get a cent from me.
Matched terms: scam

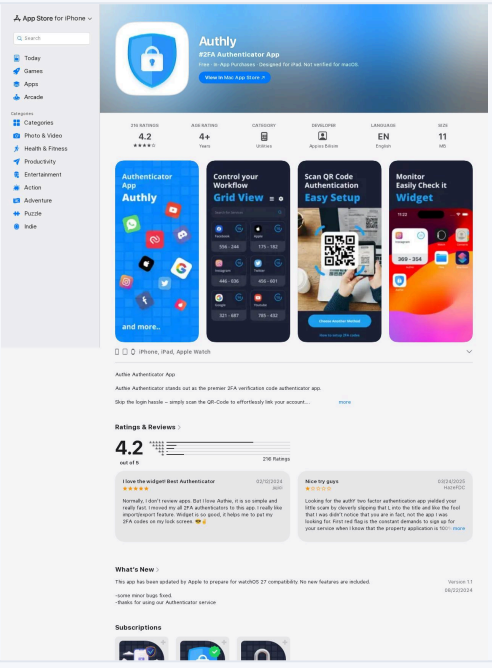

SUPER DECEPTIVE!!! Do NOT Download!!! (See review for details)
1/5 stars · 2024-11-05 · Mcfly_R · US App Store
The more widely used 2FA Authentication app is AuthY with a -Y and NOT AuthLY with an -LY. Naming your app this, charging a subscription fee for a 2FA authentication app, & then paying to have it suggested at the top of the apps list when searching is SO slimey. Garbage app, garbage business practice. 0 stars if i could, should be taken off the app store for such disgusting anti-consumer behavior
Matched terms: deceptive, subscription

Two US reviews reproduced in supplied dossier page7. Both name Authy/Authly confusion; their allegations are not independently reproduced transactions.

WHAT YOU NEED TO KNOW

A trusted name can lead to a different publisher.

01

A different publisher puts Authy and Duo in its identity.

Authenticator App - Authy, 2FA uses the English subtitle Duo Authy Authenticator App. Apple names 满 李 / MAN LI, and the working legal pages identify LI MAN. Neither official Authy Inc. nor Duo Security LLC is the listed seller. This prominent brand-keyword combination risks confusing people choosing software to protect login codes.

E40/E41/E46/E47; official references E6/E7 and E55.

E40 E41 E46 E55

02

People looking for Authy say they installed Authly instead.

Two US reviews dated 5 November 2024 and 24 March 2025 explicitly describe the Authy/Authly name confusion. The March reviewer says no money was paid; the report does not turn these complaints into payment receipts or verified fraud losses.

E1 / E2 / E6 / E7 · Dated source records linked below.

E1 E2 E6 E7

03

A security app sends its privacy button to a 404.

The current Apple privacy button points to a missing Appios page. Separate links inside the description still open Google Sites policies named Authie, with missing operator fields and a legacy SBA support contact.

E2 / E8 / E9 / E10 / E11 · Dated source records linked below.

E2 E8 E9 E10 E11

04

The publisher-history trail extends beyond one app.

Current Apple data lists 13 Appios apps. Secondary exact-ID catalogs associate Authly, Gun Identifier and Antique Identifier with the older SBA identity, while Authly's own linked policy retains the SBA domain. No Apple enforcement-evasion conclusion follows from these records alone.

E5 / E9 / E15 / E19 / E30 / E31 · Dated source records linked below.

E5 E9 E15 E19 E30 E31

05

The second authenticator has its own identity mismatch.

Auth Authenticator is on the same Appios account. A secondary catalog retains its former Authy Authenticator title, and its current linked policies name ERSIN LTD instead of the current Apple seller.

E5 / E12 / E13 / E14 / E20 · Dated source records linked below.

E5 E12 E13 E14 E20

06

The second account also markets Google- and Dropbox-related Mac apps.

Apple confirms 15 products on developer1653727587. Gmail, Docs and Photos icons combine red, yellow, green and blue; original Docs/Dropbox promotions use unqualified #1 badges. Google Drive and Dropbox currently use a generic cloud icon, not the official product icons. Review the exact comparisons rather than treating every utility as a proven scam.

E44/E56/E58/E59/E60.

E44 E58 E60

WHAT IT COSTS

Authly's weekly offer has an estimated yearly cost of $363.48.

Authly6476198484 only. The US, German and Irish listings show separate weekly, monthly and yearly purchase options. These are listed prices, not observed charges. A monthly subscription tile advertises a free trial, but no trial duration was verified in the checked iOS page. Purchase flow and equivalent benefits between plans were not tested.

Weekly versus yearly: about 9.1 times the listed US annual option

At an unchanged weekly rate and without cancellation, the estimated yearly equivalent is $363.48, compared with the separately listed $39.99 yearly plan. In Germany/Ireland it is €415.48 versus €44.99, about 9.2 times. These are renewal-cost estimates, not a claim that a customer paid those totals.

Prices: source dossier pages 1-3 and fresh Apple listings E2-E4. Billing intervals and calendar renewal dates can affect actual yearly charges.

Prices displayed in the saved listing

Purchase option	United States	Ireland
Premium Access, 1 Week	$6.99 weekly	€7.99 weekly
Premium Access, 1 Month	$12.99 monthly	€14.99 monthly
Premium Access, 1 Year	$39.99 yearly	€44.99 yearly

App Store ID

6476198484 / 6444312209

Version

Authly1.1; Shield authenticator iPhone3.7.5 / Mac3.7.8

First released

31 January 2024 · Apple app release field

Authy in the title. Duo in the subtitle. A different seller.

The added case is Authenticator App - Authy, 2FA, App ID6444312209, bundle com.maxapps.authenticator, on Apple developer1653727587. Its US/Irish English subtitle is Duo Authy Authenticator App. Apple identifies the seller as 满 李; the EU provider panel renders MAN LI, and the linked policies use LI MAN. The copyright and working product site use Shield Apps. These are a documented account/brand association, not the official Authy or Duo publisher.

Placing two established authentication-product names in the searchable title/subtitle makes this more than a buried compatibility reference. App Scam DB’s assessment is misleading brand-keyword presentation: a buyer searching for Authy or Duo can encounter a separately sold authenticator carrying both names. The observed blue shield is visibly different from official Authy’s red icon and Duo’s green icon; no copied-Authy-icon verdict is claimed.

Twilio ended its official Windows/macOS/Linux Authy desktop apps on19March2024. The Shield Apps Mac listing is a separate product, not a verified return of official Authy Desktop. Its current Mac page shows version3.7.8; the iPhone API shows3.7.5. The platform records are kept separate.

The visible US reviews include praise and setup-difficulty complaints. They do not provide an explicit Authy-confusion or proven-payment-loss account comparable to the Authly reviews. Those two earlier complaints remain attributed to Authly alone.

Third-party app

Shield Apps authenticator: blue shield, different seller. E40/E44.

Official Duo reference

Official Duo Mobile /422663827 by Duo Security LLC. Original Apple icon. E55.

Open this app’s Mac listing Official Authy desktop end-of-life notice

E40/E41/E46/E47/E67.

A Google-coloured mail icon, and a broken privacy-button domain.

Quick Access for Gmail + uses diagonal red, yellow, green and blue bands around a white envelope. Official Gmail uses a coloured M envelope mark on white. The palette and Gmail title create a recognisable Google association, while the geometry differs; these are not identical icons.

The description declares an independent app using the Gmail API and denies Google affiliation. The download is currently free and the inspected listing has no in-app-purchase section. It would be inaccurate to describe this specific app as a paid Gmail subscription scam.

Its App Store privacy button points to www.shieldapps.cc/quickaccessforgmail/privacy, which failed name resolution; Google DNS returned NXDOMAIN. The description points to a different, working .top policy. A working alternate page does not make the actual Apple privacy button accessible.

Third-party Gmail

Shield Apps /6757919783: original current Apple icon. E56.

Official reference

Official Gmail: original current Apple icon from Google. E49.

Open the Gmail-named listing

E56/E49. E63/E64; official brand guidance E65.

Google Docs in the promotion, Google colours in the icon.

Quick Access for Google Docs uses the same four-colour diagonal background with a white document/image symbol. Official Google Docs uses a blue document icon. The report shows both originals so readers can see the Google-colour association and the distinct shape.

The first original promotion leads with Google Docs for Mac, includes the official-looking Docs/Sheets/Slides product marks, and adds a #1 Google Docs laurel badge. No chart, territory, category, date or ranking source is supplied for that badge in the inspected listing. That is an unsubstantiated promotional ranking claim, not a ranking independently verified here.

The description also states that the app is independent, built with Google APIs and not affiliated with Google. Listed upgrades are $14.99 annually and $19.99 lifetime. The disclaimer is material, but it does not itself establish permission to adopt the overall brand presentation.

Third-party Google Docs

Shield Apps /6756507719: original current Apple icon. E58.

Official reference

Official Google Docs: original current Apple icon from Google. E51.

Open the Google Docs-named listing

E58/E51; official brand guidance E65.

Google Photos branding around an embedded web experience.

Quick Access for Google Photos uses four diagonal Google-coloured bands with a white stacked-photo symbol; official Google Photos has a multicolour pinwheel. The shared palette and product name can suggest the Google ecosystem, but the icons are visibly different.

The policy explicitly describes an embedded photos.google.com website for browsing and Google Photos API uploads for native shortcuts. The listing says it is an independent companion, and current wording distinguishes free web access from paid native tools. This report does not call it a fake API integration or claim those capabilities were tested.

The current listing offers $14.99 yearly or $19.99 lifetime for its Pro tools. The concern is the combined brand-led identity and which publisher users may think they are choosing, not the mere existence of a third-party client.

Third-party Google Photos

Shield Apps /6768488342: original current Apple icon. E59.

Official reference

Official Google Photos: original current Apple icon from Google. E52.

Open the Google Photos-named listing

E59/E52; official brand guidance E65.

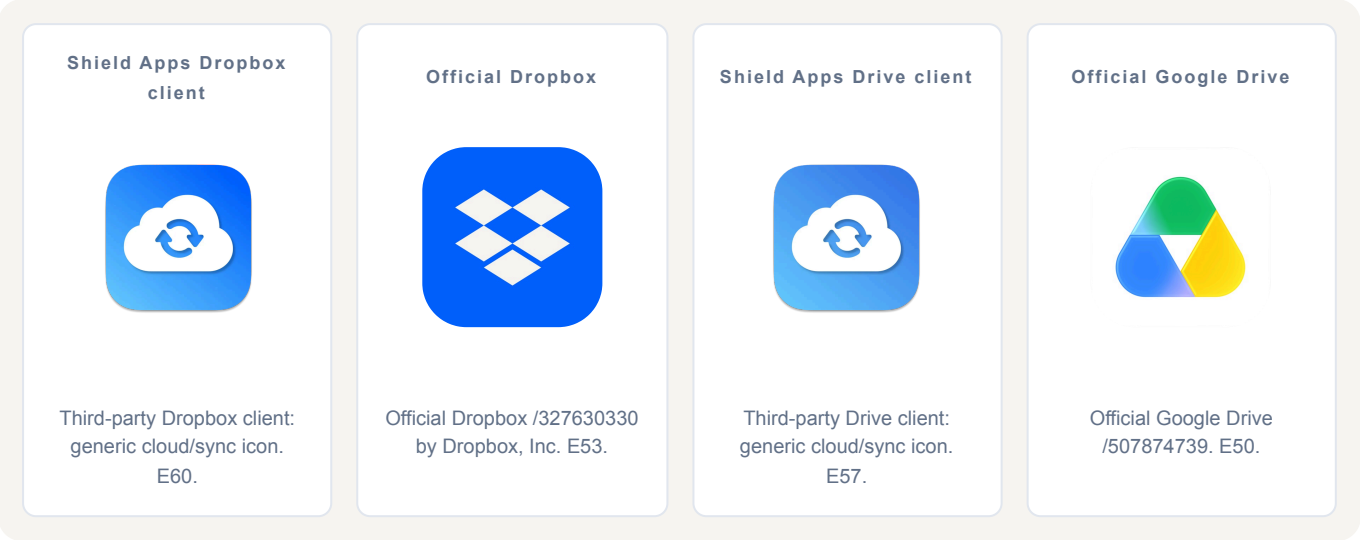

The cloud icons differ. The promotions still borrow brand authority.

Quick Access for Dropbox6754376846 and Quick Access for Google Drive6754816629 use generic blue cloud-and-sync icons. These are not the official Dropbox box or Google Drive triangle, and this report does not label them exact icon copies. Their exact Apple artist IDs still confirm membership of the same Shield Apps account.

The Dropbox promotion says Dropbox App for Mac, reproduces the Dropbox mark beside Finder and adds #1 Dropbox App. The inspected listing gives no territory, category, date or source for the ranking badge. App Scam DB flags that combination as a misleading-affiliation and unsubstantiated-ranking risk.

Current Dropbox wording explicitly denies affiliation and states use of the official Dropbox API. Current Drive wording puts its independence disclaimer at the start and explains that payment unlocks the third-party app, adds no Google storage and is not paid to Google. Those clear statements materially distinguish the current Drive presentation from a claim to be the official Google product.

A Dropbox reviewer, BPhnl, complained on24October of errors and unfamiliar files. The developer answered that shared folders in the signed-in account could explain this and advised checking the intended account. This is a user complaint and a published explanation, not a verified cross-account data leak. The page also contains a detailed positive support review; neither is evidence of a fabricated review.

E60/E57/E53/E50/E66.

Original promotions: the names, badges and screenshots users see

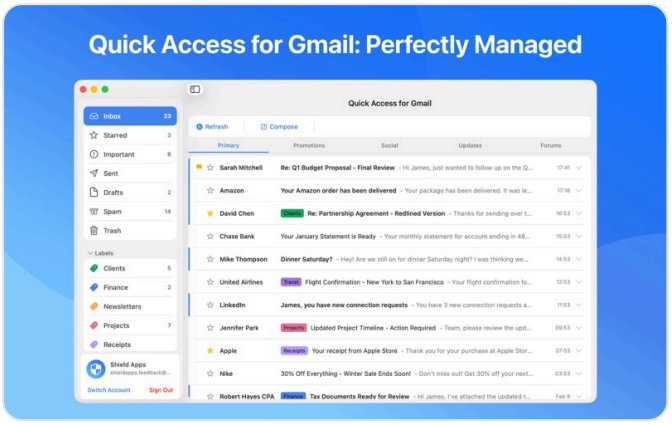

These are the original Apple-hosted marketing images, not recreated product screenshots. Google Docs and Dropbox show the unqualified #1 badges. The Gmail and Photos images show the app interfaces and the service names; product-logo use inside an integration screenshot is not by itself proof of fraud.

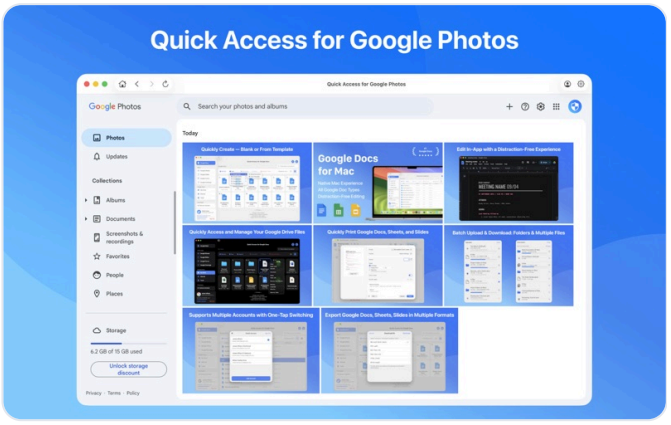

Original Google Docs for Mac promotion with #1 Google Docs badge and Google product marks. E58.

Original Dropbox App for Mac promotion, Dropbox mark and #1 Dropbox App badge. E60.

Original Quick Access for Gmail promotional interface; distinct third-party app name. E56.

Original Google Photos client promotion showing the embedded web interface. E59.

E41/E58/E60/E56/E59.

Who is Shield Apps, and what does the authenticator cost?

The strongest direct connection is the Apple account itself: the 15 current products share developer1653727587. The working shieldapps.top homepage links exact product IDs and repeats the same support mailbox found in Apple responses and Notion policies. The legal pages name LI MAN. No corporate registration number, verified shareholders or additional Apple account under common control was recovered.

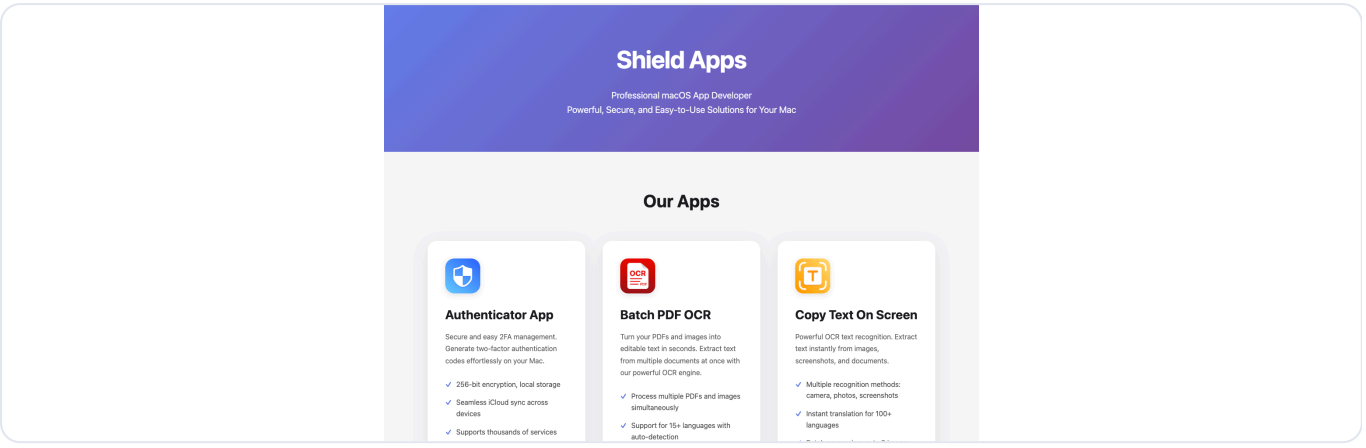

The official .top registry record preserves registrant country CN and region hu bei, while name and contact details are redacted. The domain was registered18November2025 through Alibaba Cloud and uses HiChina nameservers. This is a source-backed China/Hubei domain-registration indicator, not nationality inferred from the seller's name or an Apple-

verified trading address. The app-specific business country remains Unknown because the inspected EU provider panels give no address.

Both Germany and Ireland say MAN LI has not identified as a trader. That published status sits alongside paid authenticator upgrades and a professional 15-app product site, creating a concrete commercial-status question for Apple to review. The report does not make a legal determination of the operator’s trader status.

The authenticator lists US annual purchases at $9.99 and $14.99, monthly at $4.99, and lifetime purchases at $29.99 and $39.99. These are distinct listed options, not one verified checkout offer. No weekly purchase is listed in the inspected US table. The earlier Authly $6.99 weekly plan must not be attributed to this app.

The Notion privacy page is readable and names LI MAN; it claims no personal/usage collection and device/iCloud storage, consistent in broad wording with its Apple Data Not Collected label. Its terms leave governing law tied to the unspecified jurisdiction where LI MAN is situated. App traffic, key storage, cryptography and purchase flows were not tested.

Actual loaded Shield Apps homepage and authenticator product card. E45.

Open the Shield Apps product site

E40/E42/E43/E45/E46/E47/E48.

All 15 apps: exact identities and what the review established

Every current catalog product was checked, including its original icon, available promotional images, public listing, privacy link and exact artist ID. The six service-named clients and the authenticator receive the specific branding assessments above. The other tools use generic utility names/icons; their presence on this account does not establish impersonation or fraud.

Dislike Checker for YouTube +6741679691 uses a thumb-down icon rather than YouTube's play button and explicitly says its estimates come from Return YouTube Dislike, not official YouTube dislike totals. Smart Printer's subtitle lists printer brands as compatibility claims, with a generic printer icon; no copied manufacturer logo was identified in its inspected first two promotions.

A separate historical lead is AdBlock Pro for Desktop6449941759, attributed by search-indexed secondary catalogs to 满 李 and the Shield Apps mailbox. Current Apple US/DE/IE lookups return no product, and its US page returns404. The original full secondary page could not be retrieved; disappearance does not establish an Apple fraud ban, and the current account remains active.

Current US catalog: developer1653727587. Exact IDs are clickable in the links below.

A repeated Authy-name concern does not prove one operator

Authly6476198484 and Authenticator App - Authy, 2FA6444312209 are separate current Apple account identities. The first belongs to Appios developer1796567865; the second to 满 李 developer1653727587. The reviewed support domains, legal-provider names and bundle IDs do not establish a shared owner, transfer, binary reuse or common account controller between them.

The Appios-SBA product history and ERSIN/named-developer leads remain documented in the following sections. They must not be drawn as ownership edges to Shield Apps just because both publishers use Authy-related wording. The direct Shield Apps grouping consists of its own exact account membership, shared support identity and linked product site.

Archive lookup returned four exact-URL captures for the added authenticator, but replay was blocked429. Its Apple release date is6December2022; without readable historical captures this investigation does not invent a generic-launch-to-Authy change or a return after a ban.

Publisher separation and direct identifiers for Apple review

Group	Direct record	Connection established
Appios Bilisim	Apple developer1796567865; Authly6476198484	Current account and labelled SBA/ERSIN/developer-attribution trails
Shield Apps / 满 李 / MAN LI / LI MAN	Apple developer1653727587; authenticator6444312209	15 current products, same site/support/legal identity
Between the two groups	Different artist IDs, domains and named operators	Repeated naming concern; shared control not established

E5/E9/E15/E25/E27; E44/E45/E46/E68.

One extra letter. A different security provider.

Authly inserts an L into Authy. In the same authenticator category, that small spelling change can be easy to miss. Two dated buyers describe exactly that mistake; App Scam DB assesses the naming as misleading in this documented context.

The official reference is Twilio Authy by Authy Inc., app 494168017. Authly is a separate Appios product, app 6476198484. The icons below are visually different: Authly uses a blue shield/lock, while Authy uses its red mark. The evidence supports a name-and-supplier confusion warning, not a claim that Authly copied Authy's icon.

Authly's description also lists Authy and Twilio among many purportedly supported services. Naming compatible services is not automatically an affiliation claim. The warning rests on the near-identical product name and the concrete confusion reported by buyers.

The listing offers iPhone/iPad and Apple Watch support, with M1-or-later Mac compatibility also shown by Apple. This is not evidence of a separately verified native Mac edition. E1/E2/E5.

E1/E2/E6/E7/E28.

The reviews describe the exact mix-up

On 24 March 2025, HazeFDC reported searching for Authy, installing Authly and noticing the extra L only afterward. The reviewer also alleged non-working codes and repeated subscription prompts, but explicitly said the app received no payment. Those functionality claims were not reproduced in an independent test.

On 5 November 2024, Mcfly_R likewise contrasted AuthY with AuthLY and objected to the subscription presentation. The reviewer alleged paid search placement; this investigation did not obtain ad-account or ranking-manipulation evidence.

Other reviews praise the app's widget and import/export features. The checked US listing displays 4.2 stars from 216 ratings. Two selected complaints establish documented user confusion, not the experience of every user or a verified count of financial losses.

Read the reviews on Apple's US listing

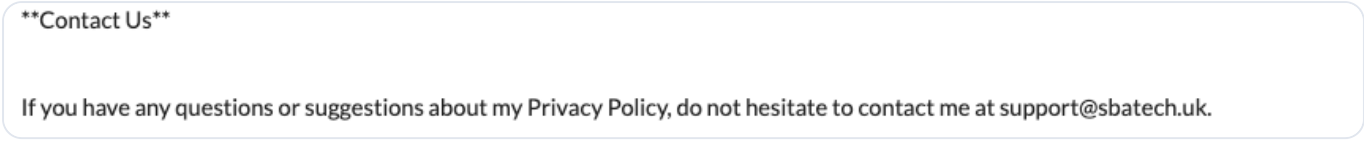

E1 page 7; fresh Apple text E2. Supplied page 9 preserves the original native product-page capture.

Apple’s privacy button is broken; the other policies name Authie

The App Store privacy button opens appios.com.tr/privacy.html, which returned 404 in the supplied analysis and in the independent check. Appios’s working homepage links the same missing route. Its separate legacy contact.html route also returned 404; the homepage still displays a company-contact section.

Inside the app description, different links lead to authie-privacy and authie-terms on Google Sites. The privacy page leaves the opening provider-name slots blank; the terms omit the named rights-holder in their ownership sentence. Both use the legacy sbatech.uk support domain rather than identifying the current Appios company as operator.

Google Sites hosting is a concrete platform fact, not proof that the developer paid nothing or that the app is fraudulent. The concern is that buyers of an authenticator face a broken primary privacy route and inconsistent operator information. The Apple label declares identifiers, usage data and diagnostics not linked to identity; this investigation did not inspect secret storage, network traffic or the claimed encryption.

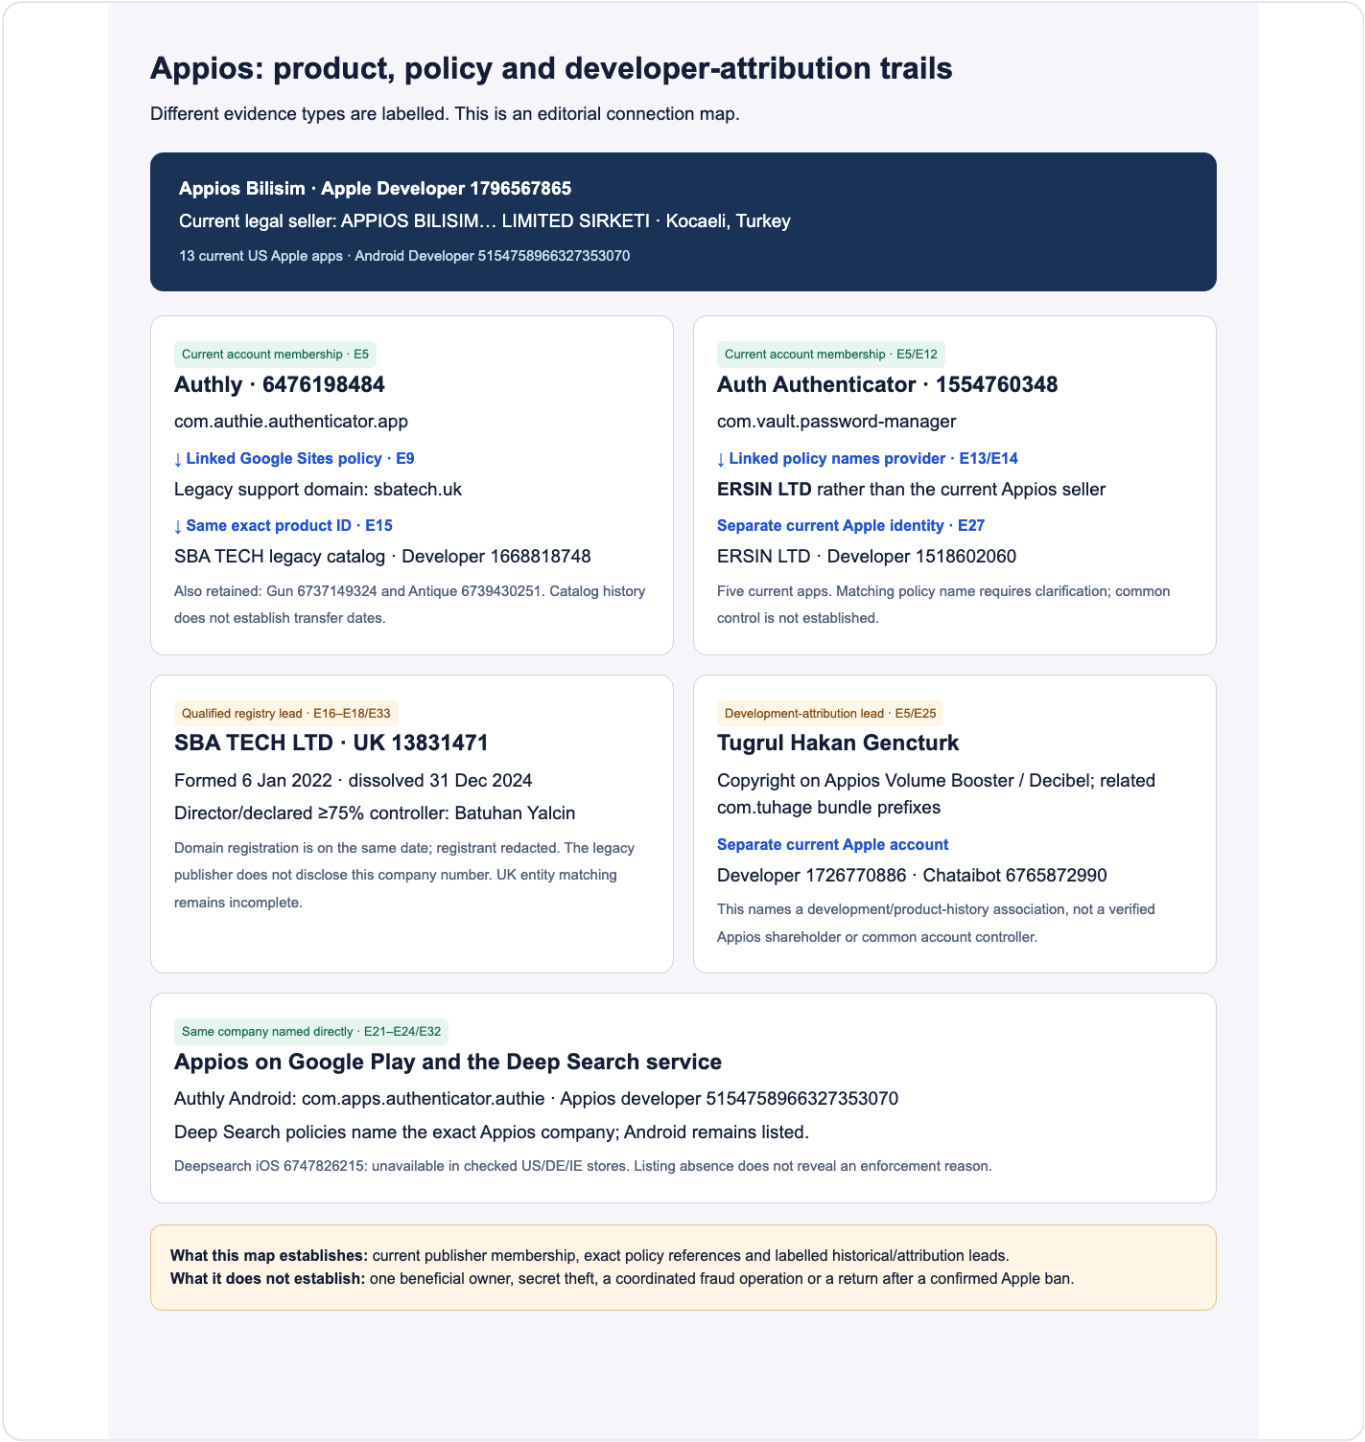

Actual cropped contact paragraph of the Apple-linked Authie policy, showing the legacy SBA domain. E9.

Apple-linked privacy page Privacy link inside the description Terms link inside the description

Follow the product and policy connections

Solid links in this diagram are exact current account membership, linked policy references or matching product IDs. Registry and named-developer leads are qualified separately. A legacy contact, policy mismatch or common service provider can reflect a transfer or contractor relationship; it does not, by itself, establish common beneficial ownership.

Editorial connection map: direct product/policy links are separated from historical catalogs, statutory-company matching and named-developer leads. E5/E9/E12-E20/E25/E27/E30/E31/E33/E35-E38.

E5/E9/E12-E20/E25/E27/E30/E31/E33.

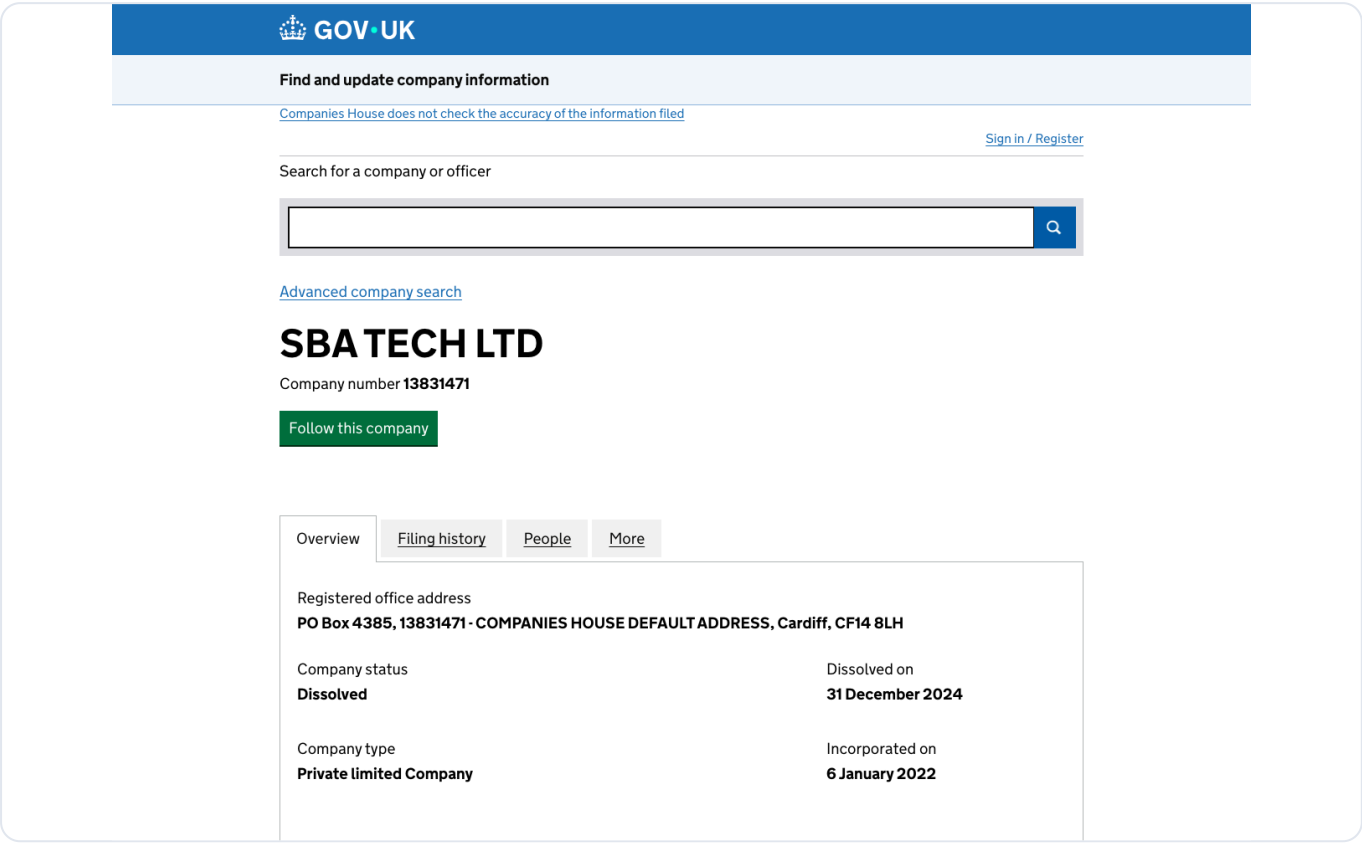

SBA TECH: a legacy product trail, not a proven Apple ban

A secondary Appstor page names SBA TECH for Authly and links exact Apple ID 6476198484 plus developer 1668818748. Its catalog also retains Gun Identifier 6737149324 and Antique Identifier 6739430251 under SBA, while current Apple records place all three under Appios. Authly's own still-linked support domain independently corroborates a legacy SBA association. The catalog's contradictory zero-app summary is not used as proof of a transfer or removal date.

The old SBA US developer URL returned 404 and its exact Apple developer lookup returned no records. VPN Guard Fast Proxy 1668818746, retained in the legacy catalog, also returned 404 and no lookup result in US/DE/IE. These establish checked unavailability, not an Apple account-termination notice or fraud finding.

Companies House lists an exact-name UK company, SBA TECH LTD 13831471, incorporated 6 January 2022 and dissolved 31 December 2024. It names Batuhan Yalcin as director/secretary and a person with 75%or more share/voting control. The legacy sbatech.uk domain was registered on the same incorporation date, according to Nominet; its registrant is redacted. The public app policy does not publish a company number, so the publisher-to-UK-entity match remains a registry lead.

A search-indexed professional profile for Batuhan Yalçın states an Appios Bilişim affiliation and lists related authenticator/Second Sim/VPN work. Direct profile retrieval was blocked. That is a self-reported professional association, not a statutory ownership record for Appios or proof of who controlled the Apple accounts. The record does not support describing a banned developer's return as confirmed.

Companies House's exact-name SBA TECH LTD record13831471 shows dissolution on31 December2024. Company dissolution and Apple account enforcement are separate events. E16.

Product-history matches and their source strength

E9/E15-E19/E30/E31/E33/E38. Company and publisher identities remain qualified separately.

The second Appios authenticator points to ERSIN LTD

Apple currently lists Auth Authenticator 1554760348 on the same Appios account, bundle com.vault.password-manager. It offers a separate weekly $9.99, monthly $14.99 and yearly $49.99 purchase list. At an unchanged weekly rate, its estimated yearly equivalent is$519.48; no payment or feature equivalence was tested.

A secondary FoxData record for the same exact ID and bundle retains the name Authy Authenticator. That strengthens the brand-name history concern, but it is not a dated Apple screenshot or a verified name-change event. Its old displayed version date cannot establish when the title changed. Current Apple uses Auth Authenticator.

Its description links Google Sites policies named auth-privacy and auth-terms. Both identify ERSIN LTD as service provider, while Apple identifies Appios. The privacy page also first says precise location is not gathered, then describes device-location collection. These are operator and disclosure inconsistencies on the linked page, not proof of observed location access.

Apple separately lists developer ERSIN LTD 1518602060 with five current products and a full Turkish legal seller, ERSIN GIDA TARIM URUNLERI SERACILIK AMBALAJ VE NAKLIYAT HIZMETLERI SANAYI TICARET LTD. STI. The policy’s matching display name is a lead to clarify. No contract, app-transfer record, binary match or common owner was recovered.

Auth Authenticator /1554760348. Current original Apple artwork; Appios account. E5/E12.

Current second authenticator on Apple Its linked privacy policy names ERSIN LTD

Current ERSIN Apple developer account Secondary old-title record

E5/E12-E14/E20/E27. The current names and separate numeric accounts are not conflated.

A named developer attribution leads to a separate account

Two Appios products, Volume Booster 6501970701 and Decibel Meter 6670328692, retain copyright attribution to Tuğrul Hakan Gençtürk in Apple listings. Apple's catalog also gives com.tuhage bundle prefixes for those apps, Second Phone Number 6479579768 and Notify 6742913066. Copyright/bundle strings are development-history clues, not shareholder records.

Apple separately identifies Tugrul Hakan Gencturk as developer 1726770886, currently publishing Chataibot — AI Chat 6765872990. This is a second verified account with the matching professional name. The association does not establish that it controls Appios, that the account was created to evade enforcement, or that its chatbot is fraudulent.

The separate chatbot's Apple label says Data Not Collected, while its own linked policy describes device identifiers, AI-request processing, purchase records, account retention and chat metadata. That published disclosure mismatch merits clarification on its own terms. Actual collection was not measured, and brand/model names in a chatbot subtitle alone do not establish impersonation.

Chataibot — AI Chat /6765872990, separate developer1726770886. Current original Apple icon; not an Authy comparison. E25.

Separate Tugrul Hakan Gencturk account Chataibot on Apple Chatbot policy describing retained records

E5/E25/E26/E35-E37/E39. Exact copyright/bundle/account associations and published privacy disclosures; no common-owner conclusion.

The products on the two separately identified Apple accounts

These exact current catalog records identify the products that Apple can use to locate the ERSIN and named-developer leads. Inclusion is publisher context, not an allegation that each app is fraudulent or that these accounts share an owner with Appios.

Current US Apple catalog records for the two related-account leads

App / Apple ID	Separate publisher / Developer ID	Bundle ID
VPN Proxy ™ / 6446912757	ERSIN LTD / 1518602060	com.secgin.auto.tap

ERSIN LTD Apple account Tugrul Hakan Gencturk Apple account

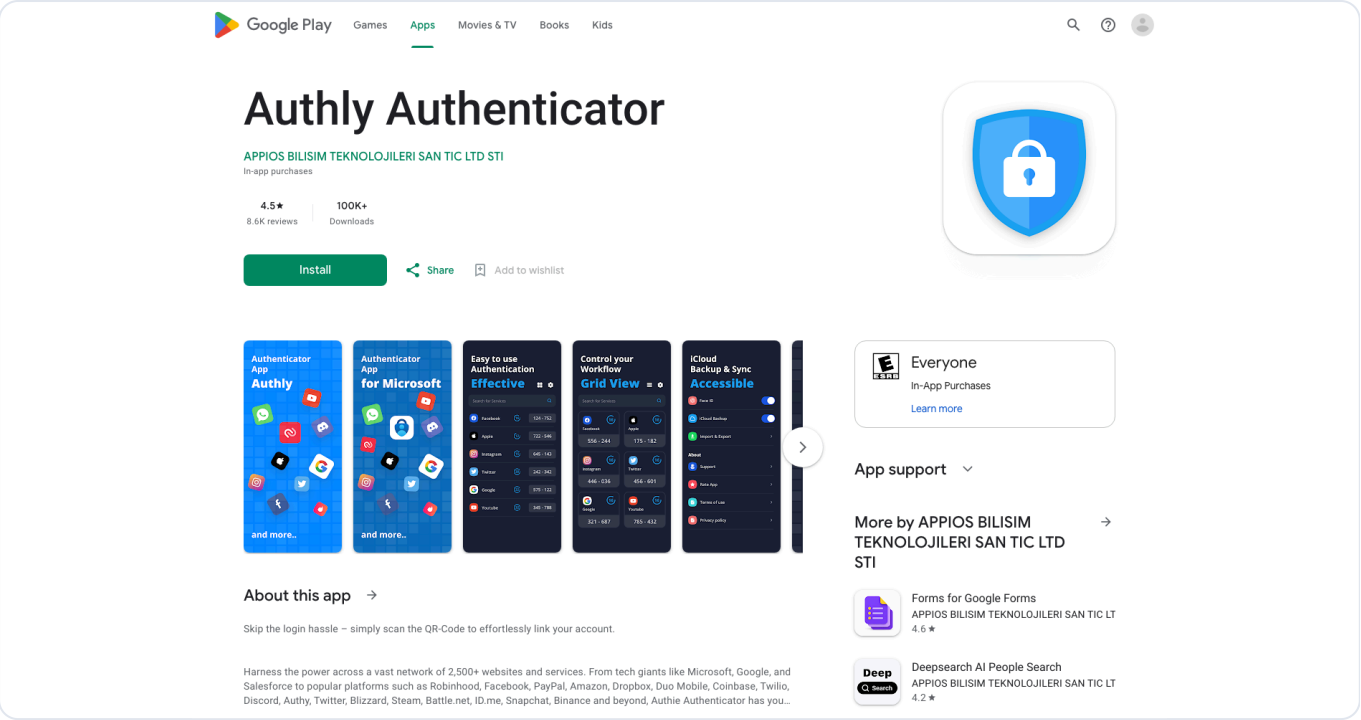

E25/E27. Both are separate account identities; policy/copyright associations do not establish common control.

The same legal company also publishes on Android

Google Play developer 5154758966327353070 identifies the same full Appios legal company and Kocaeli location. Authly Authenticator uses package com.apps.authenticator.authie and displays 100K+ downloads. The Play catalog also lists an Authenticator App, Deepsearch, Forms for Google Forms, Universal TV Remote Control and Brushes For Sketchbook. These are confirmed portfolio associations, not a fraud verdict on every app.

The Android Authly description repeats references to iCloud, Apple Watch and Face ID. The page does not explain their Android scope. This is a cross-platform presentation question, not a finding that those integrations are technically impossible or that they were tested. Google Play’s data-safety panel lists financial information, app-performance information and device identifiers as potentially collected/shared.

Deep Search’s service policies explicitly name Appios as operator. Its Android product remains listed, while iOS ID 6747826215 returned 404 and no software lookup match in US/DE/IE on 13 November. The iOS historical Appios attribution is retained by secondary catalogs, with the current service’s own company declaration providing additional context. No Apple enforcement reason or service-result test was obtained.

Native Google Play view: Authly Authenticator under the Appios company. The install count is the store's displayed100K+ range, not an independently measured download total. E21.

Authly on Google Play Appios Android developer page Deep Search service policy identifies Appios

Deepsearch Android product

E21-E24/E32. Public pages only; no app installation or purchase.

All 13 current Apple apps on the Appios account

Apple's German and Irish provider panels identify APPIOS BILISIM TEKNOLOJILERI SANAYI TICARET LIMITED SIRKETI as a trader, DUNS 595951912, in Basiskele/Kocaeli, Turkey. The company homepage and Google Play business disclosure name the same legal company and location. This is business-location evidence, not an inference from a person's name.

This table is the exact US software catalog returned for developer 1796567865 on 13 November 2026. Listing another product here establishes current publisher membership only. The report does not accuse all 13 apps of fraud, infer their revenues, or date the current account from the oldest product's release.

Open the current Appios Apple account

E3-E5/E11/E21. App-specific business evidence; no ownership inference from names or old release dates.

Confusing names and an inaccessible privacy policy

For the added Shield Apps case, the concrete review issues are Authy/Duo in the app identity, Google-colour branding, unqualified #1 product badges, the Gmail privacy-button DNS failure, and the commercial non-trader disclosure. Google and Dropbox guidance also restrict misleading brand affiliations; the existing independence disclaimers are preserved in the case-specific sections. No blanket infringement verdict is made for all15 products.

Twilio expressly lists AUTHY as a trademark. Its guidance allows accurate, limited plain-text references, but rejects confusingly similar names and misleading affiliation. The near-identical Authly name, together with two explicit user-confusion reports and the second app’s retained Authy-title record, supports a concrete brand-confusion complaint. A licence search or legal infringement judgment was not obtained.

Apple’s 2.3.1 addresses misleading marketing, 2.3.7 calls for unique and accurate names, 4.1 addresses copycats and 5.2.1 covers misleading or copycat representations. Guideline 5.1.1(i) requires an easily accessible privacy policy link. The broken Apple privacy-button target is a directly reproducible mismatch with that requirement.

The available evidence supports a misleading-name and privacy-transparency warning. It does not establish stolen authentication secrets, malicious code, manipulated rankings, a common controller behind all named accounts, or a confirmed return after an Apple ban.

Twilio trademark guidance, including AUTHY Apple App Review Guidelines

E1/E2/E8/E12/E20/E28/E29. Editorial presentation assessment and rule comparisons are distinguished from enforcement or court decisions. Added account: E40/E42/E63/E65/E66.

Current listings, company records and legal links checked

Authly and Auth Authenticator resolve under Appios in exact-ID US/DE/IE queries. Appios US catalog has 13 apps; Deepsearch iOS and legacy SBA VPN are unavailable in all three checked stores. Publisher/control conclusions remain bounded to the evidence.

CHECK THE SOURCES

The records behind this report.

This expanded dossier combines the independent investigation of two separate publisher groups with all14 pages of the supplied Authly analysis, in original order. The added Shield Apps case uses fresh US/DE/IE Apple pages, all15 current account products, original Apple artwork, rendered legal pages, a working product site, registry/DNS records and official brand references. Historical archive replay failures and secondary-only product leads are identified. No app was installed, no purchase was made and no real authentication secret was imported.

Description

Authie Authenticator App

Authie Authenticator stands out as the premier 2FA verification code authenticator app.

Skip the login hassle – simply scan the QR-Code to effortlessly link your account.

Harness the power across a vast network of 2,500+ websites and services. From tech giants like Microsoft, Google, and Salesforce to popular platforms such as Robinhood, Facebook, PayPal, Amazon, Dropbox, Duo Mobile, Coinbase, Twilio, Discord, Authy, Twitter, Blizzard, Steam, Battle.net, ID.me, Snapchat, Binance and beyond, Authie Authenticator has you covered.

Support App Widget:
Empowering you further, Authie Authenticator introduces an intuitive support widget. Seamlessly integrated, the support widget ensures you have quick access to assistance right within the app. Whether you have questions about setup, troubleshooting, or general inquiries, help is just a tap away. Elevate your experience with the convenience of in-app support.

Apple Watch Integration:
Authie Authenticator extends its functionality to your wrist with seamless Apple Watch integration. Unlock a world of convenience as you effortlessly access your authentication codes directly from your Apple Watch. Swift and secure, the Authie experience is now at your fingertips – or, in this case, on your wrist. Enjoy the added flexibility and ease that comes with authenticating right from your Apple Watch.

Witness the dynamic 6-digit code refreshing every 30 seconds, ensuring an ever-changing layer of security.

Rest assured, your data in Authie Authenticator is shielded with robust encryption, even when stored in iCloud. Your access, your control.

Optimize your experience by unlocking Authenticator with a swift Apple Watch gesture or Face ID recognition for instantaneous access.

Experience seamless synchronization effortlessly spanning across all your devices. Authie Authenticator – your key to elevated security.

Details on Subscription Auto-Renewal:
Subscriptions undergo automatic renewal unless you disable the auto-renewal feature at least 24 hours before the current subscription period concludes. Your account will be billed for renewal within the 24 hours leading up to the current period's end, with the renewal cost clearly specified. Take control of your subscription preferences by navigating to your Account Settings post-purchase, where you can manage and disable auto-renewal. Please note that any unused portion of a free trial period, if provided, will be forfeited upon subscription purchase, where applicable.

Privacy Policy: https://sites.google.com/view/authie-privacy/

User reviews mentioning possible fraud or deception (2)

Nice try guys

1/5 stars · 2025-03-24 · HazeFDC · US App Store

Looking for the authY two factor authentication app yielded your little scam by cleverly slipping that L into the title and like the fool that I was didn’t notice that you are in fact, not the app I was looking for. First red flag is the constant demands to sign up for your service when I know that the property application is 100% free. Furthermore, when I did manage to get your app to work, none of my authentication accounts recognize the codes you were giving me. Only after some digging did I see you quite intentionally and tempted to sneak your app into the top searches so that people like myself who might not have noticed the L in your name would break down and give you money.

While your actions might not be against the TOS it is truly disgusting. Any company that tries to could wink people like cleverly misspelling their company. Well, you didn’t get a cent from me.
Matched terms: scam

SUPER DECEPTIVE!!! Do NOT Download!!! (See review for details)

1/5 stars · 2024-11-05 · Mcfly_R · US App Store

The more widely used 2FA Authentication app is AuthY with a -Y and NOT AuthLY with an -LY. Naming your app this, charging a subscription fee for a 2FA authentication app, & then paying to have it suggested at the top of the apps list when searching is SO slimey. Garbage app, garbage business practice. 0 stars if i could, should be taken off the app store for such disgusting anti-consumer behavior
Matched terms: deceptive, subscription

Version history
