MISLEADING BROWSER IDENTITY WARNING · BROWSER UTILITIES

Chrome look-alikes. Real buyer confusion. Apple must act.

These three Mac utilities show the misleading combination Apple must stop: Chrome-like icons, Google's red, green, yellow and blue colour cues, and the search-facing phrases for Chrome and App for Chrome. An ordinary utility release history must not become cover for later brand imitation or for capturing downloads intended for the official browser. This is an App Review and search-ranking risk with a real consumer cost: public reviews describe trying to download Chrome through Chomax and paying for Open App before discovering it was not Google Chrome. Open App reached No. 10 in Apple's US Mac Top Free chart on 10 November 2026. Apple should urgently investigate the whole presentation, require unmistakable differentiation from Google Chrome, and enforce its rules where violations are confirmed.

VISUAL EVIDENCE

Google's Chrome mark beside the three look-alike identities

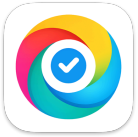

Google's official Chrome-site artwork is the reference. Chomax and Hub use their current store icons; Open App is shown with the Chrome-like icon referenced by its 3 August 2026 archived listing. Open App's current four-square icon appears in the history below. These are altered designs, not pixel-identical copies. The editorial concern is recognisable Google colour-and-shape cues combined with browser-led naming and documented buyer expectations.

Official Chrome · Google

Original 192px artwork linked by Google's official Chrome website, retrieved 10 November 2026. E9.

Chomax Browser · current

Original Apple artwork for Chomax, app 6751177436, retrieved 10 November. Its added check and swirl differ from Chrome's mark. E3/E4.

Hub for Chrome · current

Original Apple artwork for Hub, app 6767745342, retrieved 10 November. Shape and rendering differ from Chrome while retaining its familiar colour family. E3/E5.

Open App · observed 3 August

Artwork referenced by the 3 August 2026 Apple archive for app 6748339444; recovered in the earlier investigation. Not its current icon. E20/E22.

By Alex Kleber · Published 2026-11-10 · Updated 2026-11-10

An ordinary update history must not become cover for a Chrome look-alike

The deception risk is a two-stage presentation: an app establishes an ordinary utility history, then adopts an identical or recognisably similar official-app identity to attract people searching for that brand. Familiar icons and colours, combined with keyword-led names such as App for Chrome, can divert browser-seeking users toward a different publisher's product. Apple must assess the complete version history and what people see in search, rather than treating every routine-looking update in isolation.

Open App provides dated evidence of earlier Chrome-like artwork, a later four-square icon and public wrong-product purchase complaints. Chomax has a review describing an attempt to obtain Chrome; Hub combines Chrome-led wording with a similar Google-colour visual identity. This supports a forceful misleading-presentation warning. The records do not reveal what Apple's reviewers saw in each submission, establish an initially harmless version for all three apps, or measure deliberate manipulation of the ranking algorithm.

E4–E8/E18–E21/E25–E26. Editorial assessment of the documented presentation and discovery risk; the submission process and ranking algorithm were not observed.

No. 10 in Apple's US Mac Top Free chart

A listing already attracting wrong-product complaints has reached the first ten positions of Apple's US Mac free-app chart. Apple should treat that visibility as a reason to investigate promptly, rather than let a prominent chart position reassure buyers about a product's identity.

The records below were retrieved on 10 November 2026, 16:19 UTC. Apple's RSS feed reports an update time of 15:19:56 UTC and agrees with the chart webpage. Rankings change; this is a dated observation, not a claim that the app will remain in the Top 10.

Apple US · Mac · Top Free · all categories · dated chart-data extract

Rank	Application	Apple app ID
8	Canva AI Photo & Video Editor	897446215
9	Xcode	497799835
10	Open App for Chrome & Safari	6748339444

E7/E8. Table is an evidence extract from Apple's chart data, not a native screenshot. No absolute download metric is published by these records.

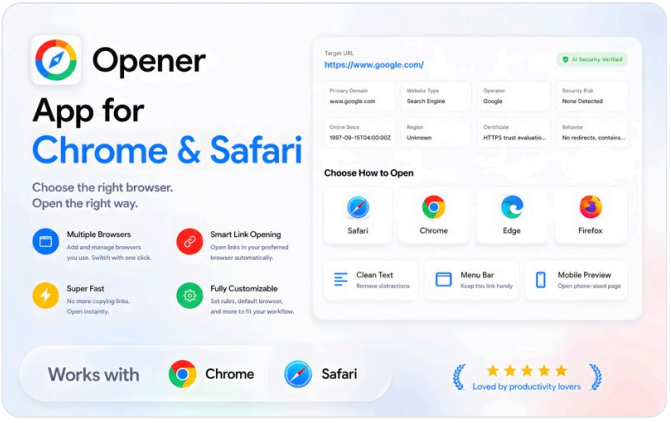

LOOK FOR YOURSELF

The screenshots tell the story.

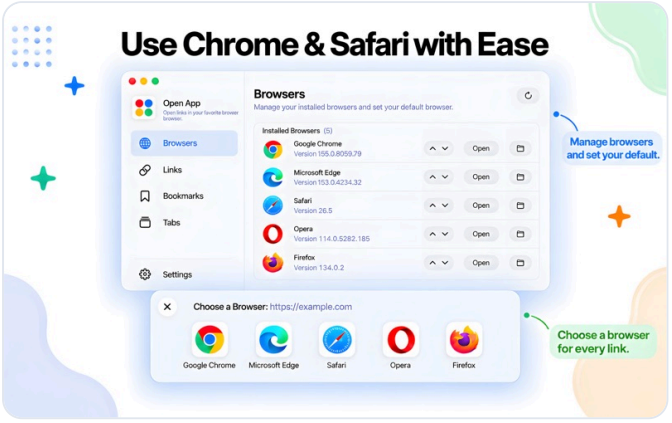

The first three visible promotions show Chomax, Hub for Chrome and Open App side by side. All nine images are the publishers' original Apple promotional assets, retrieved 10 November. They advertise browser switching, link opening and tab management; compare that utility marketing with the Chrome expectations described in buyers' reviews. These are marketing records, not independently tested installations.

Chomax promotion 1. The interface lists browsers and offers default-browser controls; it is not a screenshot of Google's Chrome installer. E4.

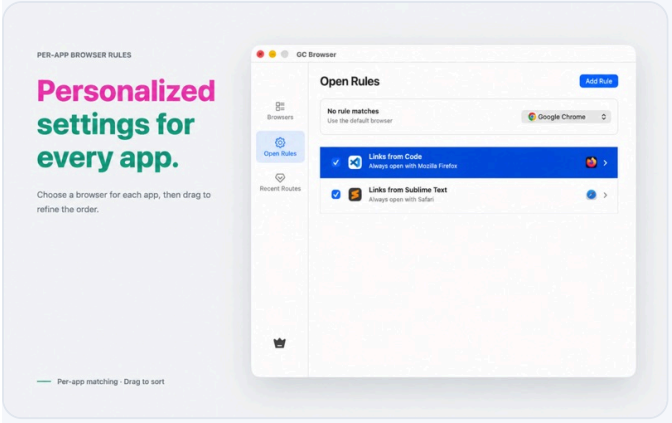

Hub promotion 1. The wording App for Chrome & Safari dominates the left side; browser choices and link-analysis features appear on the right. E5.

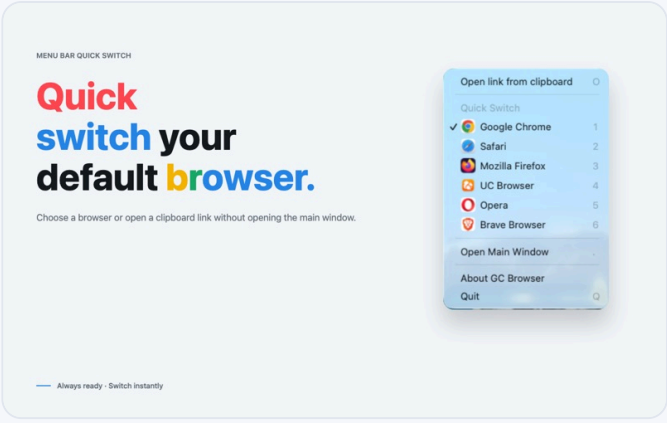

Open App promotion 1, shown alongside Chomax and Hub. The publisher advertises a separate Chrome/Safari tab-management utility; the public reviews below describe buyers expecting Google Chrome. E6/E19.

Chomax promotion 2: settings for a browser utility. E4.

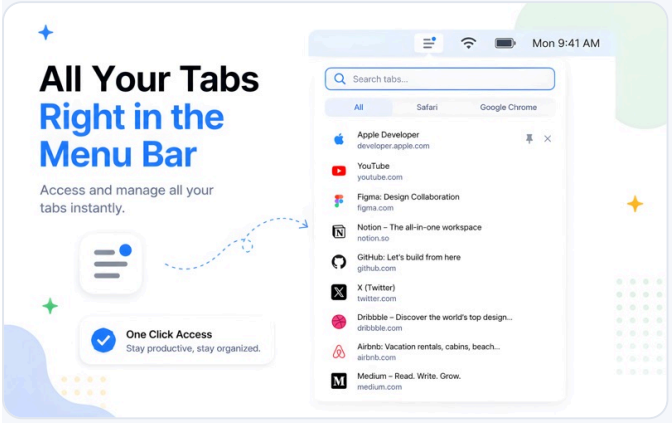

Chomax promotion 3: default-browser switching. E4.

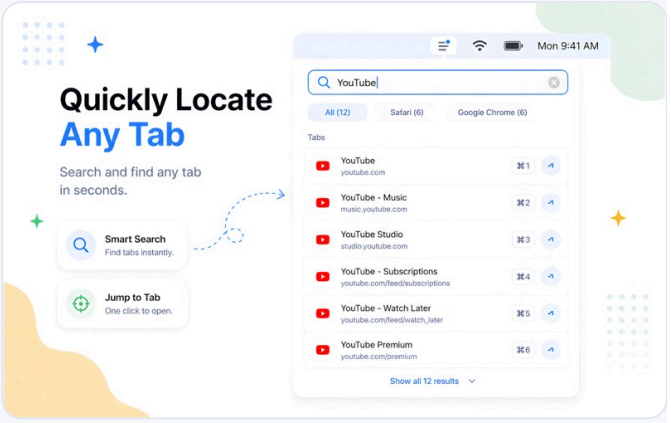

Hub promotion 2: AI-related claims are relevant to the linked privacy policy's lack of a clear analysis-data explanation. E5/E14.

Hub promotion 3: standalone utility features. E5.

Open App promotion 2. E6.

Open App promotion 3. E6.

WHAT YOU NEED TO KNOW

Chrome-like identity. Wrong-product expectations. A warning Apple must act on.

01

Chrome-seeking users describe a different product

A Chomax reviewer reports trying unsuccessfully to download Chrom through the app. An Open App reviewer says payment came before discovering that the product was not Google Chrome. These are specific public accounts of mismatched expectations, stronger evidence than colour resemblance alone. The reviewers' transactions were not independently authenticated.

Fresh Apple public review feeds, E18/E19; excerpts and source IDs below.

E18 E19

02

The title and icon need to be assessed together

Chomax is named Browser despite describing browser-switching tools. Hub places Chrome in its title, and its promotion says App for Chrome & Safari. Open App combines the same App for Chrome construction with a history of Chrome-like icons. App Scam DB assesses the combined presentation as liable to mislead people seeking Google's browser; it does not establish that every user was confused or that the three sellers act together.

Original listing metadata, icons, promotions and dated Open App artwork; E3–E6/E20–E22.

E3 E4 E5 E6 E20 E21

03

A Top 10 placement makes the issue more urgent

Both Apple's chart page and its public RSS feed place Open App at No. 10 in US Mac Top Free, all categories, in the records retrieved at 16:19 UTC on 10 November. This establishes prominent storefront exposure. It is not an absolute download count, a ranking of all US software downloads, or a measurement of how many customers were misled.

Independent matching Apple chart and RSS observations, E7/E8.

E7 E8

WHAT IT COSTS

Paying these sellers does not buy Google Chrome

Google distributes Chrome for Mac at no charge through its official website. Chomax and Open App advertise paid features for their own utilities; Hub is listed free and has no in-app purchase section in the checked pages. The prices below are advertised storefront options, not independently tested paywalls or verified charges. A paid browser companion can be legitimate; the problem documented here is a buyer entering that purchase under the wrong product identity.

Prices displayed in the saved listing

Purchase option	United States	Ireland
Chomax · annual subscription	$6.99	€7.99
Chomax · lifetime	$9.99	€9.99
Hub for Chrome · listing	Free; no IAP section shown	Free; no IAP section shown
Open App · yearly	$19.99	€22.99
Open App · lifetime	$29.99	€34.99

This is what the confusion looks like

Chomax's reviewer Nurse287 describes attempting to download Chrom through the app. Other reviews discuss its speed as a browser, while a separate positive reviewer describes the browser-switching feature accurately. The evidence therefore supports a warning about some users' product expectations, not a claim that Chomax has no useful functionality.

For Open App, bj00096 reports recognizing the wrong identity only after payment and asks for money back. Another reviewer complains directly about Chrome-like product placement. A favorable review refers to Google Chrome and expresses surprise about a subscription. A positive star rating does not resolve an underlying mistake about which product is being reviewed.

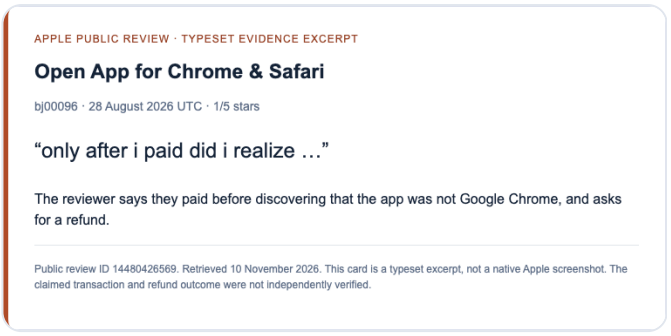

A newer Open App review, dated 29 October UTC, reports being unable to restore a $29.99 lifetime purchase on a replacement computer. That account deserves review of restoration and entitlement handling. Its claimed payment, device change and outcome were not independently reproduced, and its speculative lifetime-cost arithmetic is not

adopted here.

No equivalent wrong-product buyer account was obtained for Hub. Its warning is based on the current branding, prominent Chrome wording and disclosure issues shown below. Public review records are evidence of what reviewers wrote, not verified payment receipts or a population-wide confusion rate.

Apple review 14640450987 · Nurse287 · 8 October 2026 UTC. Typeset excerpt from the fresh public feed; not a native Apple screenshot. E18.

Apple review 14480426569 · bj00096 · 28 August 2026 UTC. Typeset excerpt from the fresh public feed; not a native Apple screenshot. E19.

Chomax public review feed Open App public review feed

E18/E19. UTC dates are converted from the feed's explicit numeric offsets. The selected excerpts do not invent a live capture or an independently tested transaction.

For Chrome is not a licence to look like Chrome

The exact phrases matter. Hub for Chrome puts Chrome in the product title, while its first promotion expands the message to Opener App for Chrome & Safari. Open App for Chrome & Safari puts App for Chrome directly into the search-facing name. Alongside familiar Google colours or Chrome-like artwork, those words can lead a browser-seeking buyer toward a different publisher's utility.

An extension is a clear example of software made to extend Chrome. Standalone link routers and tab managers can also work with Chrome. The technical distinction alone is not proof of deception; the accurate question is whether the seller clearly presents a separate utility and avoids looking like Google's own browser or official distribution channel.

The listings describe switching installed browsers, opening links, reviewing website signals or managing already-open tabs. None establishes that the product is Google's Chrome browser or an official Chrome installer. A buyer searching for Chrome should not need to discover that distinction after purchasing.

Chomax adds Browser to its own name while describing a switching tool. Its promotion shows the internal label GC Browser. Hub's listing name, Opener App description and promotional identity also differ. These inconsistencies make a clear explanation of the actual product more important; they do not by themselves prove an undisclosed rebrand history.

Open App and Hub include non-affiliation disclaimers. Apple should assess those statements alongside the title, icon, promotions and buyer accounts. A disclaimer is not proof of permission to use another brand's visual identity, and its presence does not erase the reported confusion.

What the listing presents, and what the description actually offers

Listing	Claimed utility	Identity concern
Chomax Browser	Switch defaults and route links between installed browsers	Browser name, multicolour icon and a review expecting a browser download
Hub for Chrome	Link opening, AI-assisted risk analysis and viewing modes	Chrome in title; App for Chrome & Safari promotion; different Opener label
Open App for Chrome & Safari	Chrome/Safari tab management	Browser-led title, earlier Chrome-like icons and wrong-product purchase reports

Google's explanation of Chrome extensions Google's official Chrome installation instructions

E1/E2 pages 2–6; E4–E6/E23/E24. Actual integrations, executable contents and installation flows were not tested in this investigation.

Open App's older icons beside official Chrome

Open App · 3 Aug 2026

Observed 3 August 2026 · Open App for Chrome & Firefox · app 6748339444. Original recovered Apple artwork. E20.

Official Chrome · Google

Official Google Chrome mobile-app artwork, app 535886823. Original Apple-hosted image retrieved 10 November 2026. Branding reference. E3/E27.

Open App · 10 Aug 2026

Observed 10 August 2026 · Open App for Chrome & Safari · same app ID. Original recovered Apple artwork. E21.

The archived Apple page of 3 August 2026 identifies the same numeric app as Open App for Chrome & Firefox and references a red/green/yellow segmented icon around a blue triangular core. The 10 August archive identifies Open App for Chrome & Safari and references a rounded diamond in the same colour family. The original Apple CDN artwork was recovered in the earlier investigation on 7 November.

The current 10 November listing uses four separate coloured squares. That is a material change from the older Chrome-like construction. The history is preserved here so a new icon does not obscure the presentation previously associated with this app ID.

The archived references date observations, not the exact moments when artwork changed. They do not establish the original launch icon or prove that a change was intended to evade review. Hub's current glossy triangular icon and Open App's earlier triangular-core designs share a striking visual approach, but their different account identities must not be collapsed into a common-owner claim.

Both archived Apple pages were freshly retrieved on 10 November with matching Memento-Datetime headers. The next section shows their page headers and the artwork URLs embedded in each archived document, tying the two designs to app 6748339444.

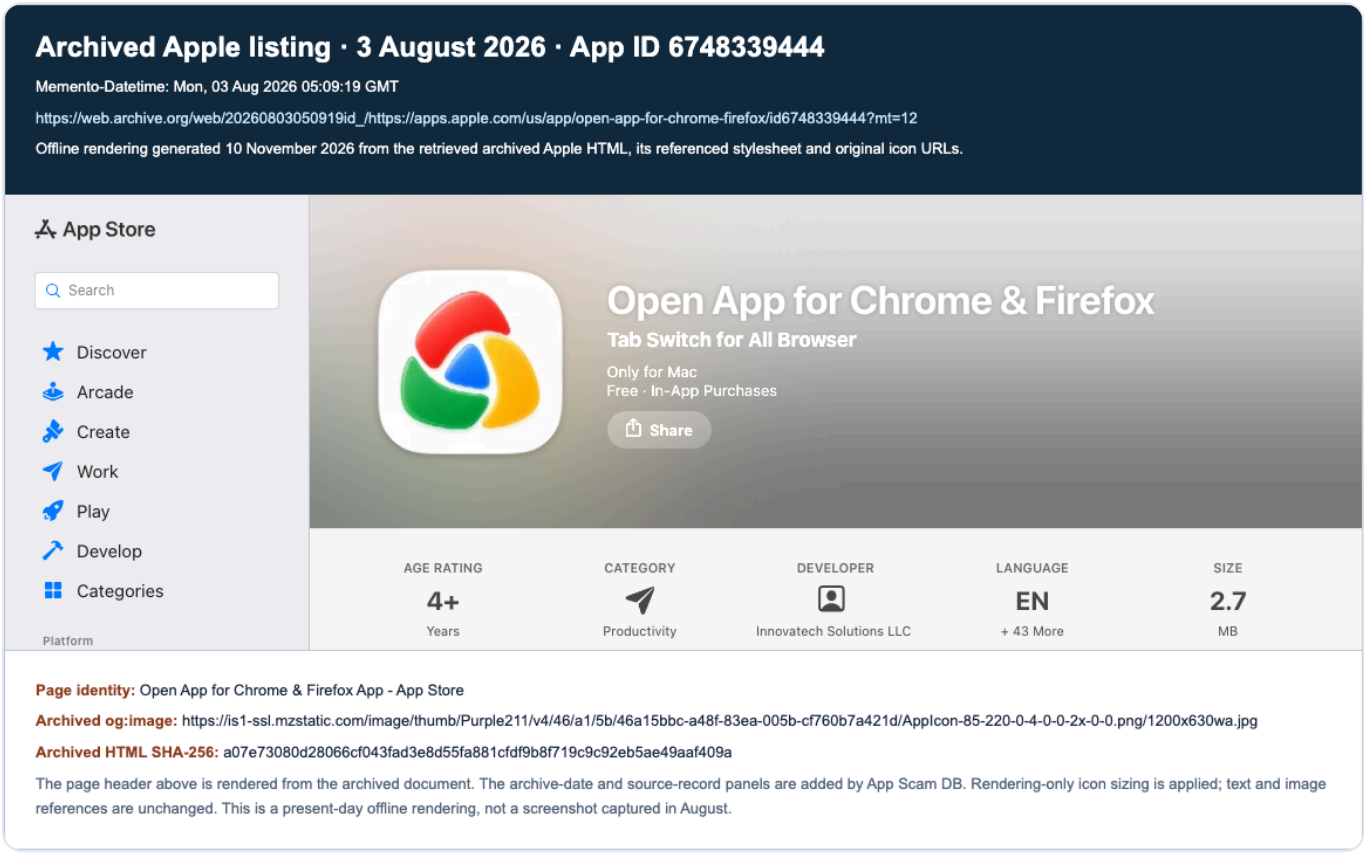

3 August Apple archive 10 August Apple archive

E20–E22/E25–E27. Historical page references were freshly reconfirmed on 10 November. The date of an archived HTML reference is distinguished from the later retrieval of the referenced image bytes.

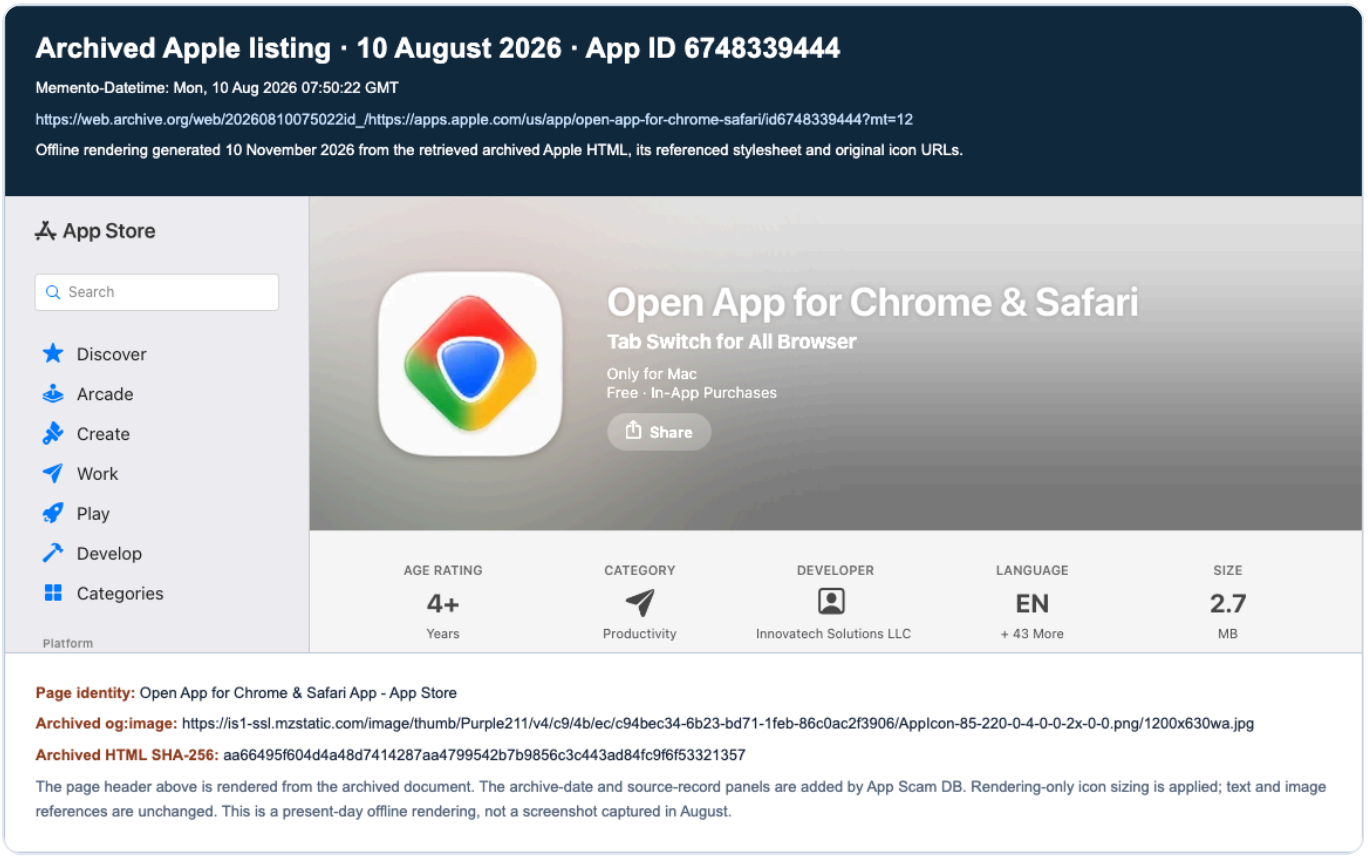

The archived pages that identify those icons

These two archived Apple documents identify the same app ID, 6748339444. Their product names, displayed icons and embedded artwork URLs connect the 3 August and 10 August designs to Open App; the archive response headers confirm the respective capture dates.

The captures below are readable offline renderings made on 10 November from those archived documents, their referenced Apple stylesheet and original image URLs. Source/date panels and an icon-sizing adjustment are supplied for legibility. They are not represented as screenshots taken in August. Each image opens at full resolution.

3 August 2026 archived Apple page · same app ID 6748339444. Present-day offline rendering from the archived HTML and its original artwork references; source/date panels and icon sizing supplied for legibility. E25.

10 August 2026 archived Apple page · same app ID 6748339444. Present-day offline rendering from the archived HTML and its original artwork references; source/date panels and icon sizing supplied for legibility. E26.

Verify 3 August archive Verify 10 August archive

E25/E26. Both responses returned HTTP 200 with matching Memento-Datetime. Archived metadata and in-page image references agree. Current image retrieval is distinct from the date of the archived page.

The current icon is shown separately

The current 10 November listing uses four separate coloured squares. The comparison above concerns the two historical designs, not today's storefront icon.

Current Open App · 10 Nov 2026

Current Apple artwork, retrieved 10 November 2026. The older icons above are not represented as today's icon. E3/E6.

E3/E6. Original current Apple artwork; separate from the two archived observations.

Three Apple accounts, with different country evidence

Chomax is on developer 1679470459. Apple's display name is rendered in Chinese characters; the EU provider field identifies QUNYING LIAO. Qiya appears in the copyright and linked support site. The US software catalog returns five current products. DE and IE identify this app's provider as a non-trader and do not disclose a business country. The linked GitHub profile has no location. Country therefore remains Unknown.

Hub is on developer 1841641565. The EU provider and its website identify yuchang zhou / Yuchang Zhou; DE and IE declare a trader in Wuhan, Hubei, China Mainland. The current checked catalog returns one app. The website's US-number contact and Pacific support hours do not establish a US business or override the Apple-declared China address.

Open App is sold by Innovatech Solutions LLC, developer 1821609828. Its current DE/IE trader panels declare Sheridan, Wyoming, United States. This is the seller's declared business address, not evidence that the controlling individual lives in the United States.

No matching contact, bundle identifier, publisher ID or documented ownership record connects the two newly reviewed accounts to Innovatech or to each other. A repeated visual tactic is sufficient to compare misleading presentation; it is not sufficient to identify a single operator.

App-specific publisher and country attribution

App / Apple account	Published identity	Country basis
Chomax · 1679470459	QUNYING LIAO / Qiya	Unknown · no business country disclosed in checked DE/IE panels
Hub · 1841641565	yuchang zhou / Yuchang Zhou	China · Apple-declared trader location, Wuhan, Hubei
Open App · 1821609828	Innovatech Solutions LLC	United States · Apple-declared trader location, Sheridan, Wyoming

Chomax Browser · US App Store Hub for Chrome · US App Store Open App for Chrome & Safari · US App Store

E3–E6/E12–E17. Country is not nationality or evidence of fraud. Personal contact values used for matching are kept out of the narrative.

Qiya's portfolio and public support trail

The direct relationship is within Qunying Liao's Apple account: Chomax, iSuperZip, iSuperZip Pro, Watermark One and DeskTube share the same numeric developer ID. The com.qiya bundle identifiers used by several products support the Qiya label; Chomax itself uses com.shrek.browserhubpro. That difference is a research lead, not proof of a transfer, hidden identity or removed account.

The linked support site is a working GitHub Pages website with privacy and terms pages, support instructions and a common contact channel. Its privacy policy describes local app information, Apple purchase entitlements and voluntary support messages. The material reviewed does not establish an app-specific privacy contradiction comparable to Hub's AI-disclosure gap.

The linked qiya20 GitHub account was created on 11 October 2025 and exposes one public repository, feedback. Public commits show support/legal page work in October 2025 and July 2026. These are repository dates, not the Apple account's creation date, an app's launch date or a verified corporate identity. No additional Apple account was attributed through this trail.

Current products on Apple developer 1679470459

Qunying Liao's Apple account Qiya support website Linked public GitHub account

E12/E13/E16. This catalog contains products across Apple's supported platforms; it is not described as five native Mac apps. No separate infringement finding is made about the portfolio products.

Hub's AI safety promise needs a specific data explanation

Hub's description advertises collection of website signals and AI-assisted link-risk assessment. Its privacy label says Data Not Collected. The linked policy is a general Yuchang Zhou document that discusses local data, diagnostics, cloud services and trusted providers, but does not clearly explain the AI analysis path, provider or whether submitted URLs and page content leave the device.

That gap matters when an app asks users to trust an AI safety assessment before opening a link. Apple should request an app-specific explanation of the analysis and data flow. No network capture or binary analysis was performed, so this report does not claim that URLs were actually transmitted, that the safety check failed or that the app contains malware.

The dedicated support site identifies the same person and repeats contact fields consistent with the Apple trader disclosure. Registry RDAP dates corechang.org to 24 September 2025 and identifies Cloudflare as registrar. Public domain records do not establish the beneficial owner or a connection to Innovatech. The site has working privacy and terms pages; it is not called nonexistent or fraudulent solely because it is a simple support site.

The first promotion also includes an unattributed five-star endorsement-style graphic. The checked Apple listing does not show enough ratings for an overview. This is a reason to ask for the basis of that promotional claim, not proof that an Apple rating was fabricated.

Hub's linked privacy policy Yuchang Zhou support website

E2 pages 2–6; E5/E14/E15/E17. No app-specific Google affiliation or brand permission was established.

Innovatech–IdeaNest–AppVance: a linked trail, and IdeaNest's app is now unavailable

The earlier investigation connects all three company names through two concrete trails: Innovatech and IdeaNest share corporate-filing administration, while IdeaNest's Google launcher retains an AppVance support identity, legacy policy links and a historical vendor record for the same bundle. Together, these are substantive reasons for Apple to investigate continuity across the companies and accounts, rather than review each storefront identity in isolation.

IdeaNest's Apps for Google App (6504402138) is no longer available at the checked US, German and Irish product URLs: all three returned HTTP 404 on 10 November 2026 at approximately 17:02 UTC. Apple's corresponding developer catalogs returned the IdeaNest artist record but no Mac software. The developer profile itself still returned HTTP 200.

This documents the app's unavailability in those storefronts; it does not establish that Apple terminated the account or why the product disappeared.

The reporter suspects the same person operates Innovatech, IdeaNest and AppVance and describes the pattern as a scam operation continuing across accounts. That remains an allegation. Shared filing-service contacts can be used by unrelated clients, and a product/support history can also arise through a transfer or inherited code. The supplied Innovatech and IdeaNest builds had different signing teams and no specific common backend was identified. The documented associations warrant investigation, but do not yet identify a common controlling person.

The reporter also described AppVance as suspended. No Apple suspension notice or enforcement reason was obtained; IdeaNest was already named in an Apple archive before the reported suspension period. The available chronology therefore does not establish a new account created after a ban. No verified link connects Chomax's or Hub's publisher to these three companies.

Fresh IdeaNest availability check · 10 November 2026 · approximately 17:02 UTC

Storefront / record	Observed result	What it establishes
US, DE and IE · app 6504402138	All three product pages returned HTTP 404	The checked app pages are unavailable
US, DE and IE · developer 1840069799	Profiles returned HTTP 200; catalogs returned no Mac software	A surviving profile with no returned Mac products
Account termination / common controller	No Apple notice / no identified common owner	Enforcement cause and common control remain unresolved

IdeaNest developer profile

E22/E28/E29. Earlier filing, binary and archival research plus fresh HTTP and Apple catalog checks. Unavailability is distinguished from a confirmed Apple account termination.

Apple has concrete reasons to act now

Apple should investigate the documented wrong-product purchase accounts and require clear product differentiation wherever the title, icon or promotions imply the identity of Google's browser. A disclaimer at the end of a description should be assessed against what a buyer encounters in search results, on the icon and at purchase.

Google's brand guidance addresses confusing affiliation, incorporation of its marks into product branding and imitation of its distinctive colours or product icons. Apple's rules 2.3, 4.1 and 5.2.1 address accurate metadata, copycats and misleading third-party representations. This report raises apparent compliance concerns for review; it does not claim a court has adjudicated infringement or that no licence could exist.

For Chomax and Open App, Apple should examine how the paid utility is distinguished from the free browser before payment, along with subscription and restore-purchase disclosures. For Hub, Apple should examine its Chrome-facing presentation, the promotional rating graphic and the privacy explanation behind AI link analysis.

Open App's Top 10 exposure increases the urgency. Apple has public review records, dated icon history and current storefront materials available to examine. The appropriate response is an evidence-based review of the whole presentation, correction of misleading materials and enforcement where Apple's investigation confirms a violation.

Specific review requests tied to observed evidence

Observed issue	Relevant Apple rule	Requested examination
Chrome-like identity and browser-led naming	2.3; 4.1; 5.2.1	Assess title, store icon, first promotion and actual function together
Reports of paying for the wrong product	2.3; 3.1.2	Review purchase disclosures and the distinction from free official Chrome
Reported failed lifetime restoration	3.1.1 / purchase restoration	Check the restore flow and entitlement handling
AI link analysis without clear data explanation	5.1.1	Require an app-specific privacy and processing explanation
Promotional five-star graphic without attributed source	2.3 accurate metadata	Verify the claim's basis and presentation

CHECK THE SOURCES

The records behind this report.

The complete six-page Chomax source is appended first, followed by the complete six-page Hub source. The authored investigation adds current Apple metadata, original icons/promotions, official Chrome artwork, dated chart records, fresh public review feeds and app-specific developer research. Earlier Open App artwork is reused with its archived-page provenance and the full prior investigation linked separately. Review cards are clearly labelled typeset excerpts. No application was installed, purchased or executed, and no claim of confirmed fraud, common control or an Apple enforcement outcome is inferred from a monitor score, country or icon resemblance alone. The updated report adds a three-icon Open App / official Chrome / Open App comparison and two clearly labelled offline renderings of freshly retrieved archived Apple pages, with archive dates and image-reference provenance.

All three pages HTTP 200, 10 November 16:19 UTC. Current name, subtitle, paid options, browser-switching description, non-trader provider identity and privacy link. DE/IE disclose no business country. US reviews corroborated separately by E18.

Open source ↗

E5 / Hub US, German and Irish listings

All three pages HTTP 200, 10 November 16:19 UTC. Chrome-facing name, Opener description, AI feature claims, no IAP section, non-affiliation disclaimer and trader location Wuhan, China Mainland. Original promotions include App for Chrome & Safari wording and an unattributed five-star graphic.

Open source ↗

E6 / Open App US, German and Irish listings

All three pages HTTP 200, 10 November 16:19 UTC. Current four-square artwork, tab-management description, non-affiliation disclaimer, advertised yearly/lifetime prices, Innovatech developer ID 1821609828 and DE/IE US trader address. Current reviews corroborated by E19.

Open source ↗

E7 / Apple US Mac Top Free chart webpage

Retrieved 10 November 2026, 16:19:56 UTC; HTTP 200. US, Mac, all categories, Free selected. Open App app ID 6748339444 is rank 10. Rank independently matches E8. Not a download total.

Open source ↗

E8 / Apple US Top Free Mac RSS feed

Retrieved 10 November 2026, 16:19:57 UTC; HTTP 200. Feed update field 2026-11-10T08:19:56-07:00, equivalent to 15:19:56 UTC. Tenth ordered entry is exact app ID 6748339444. Feed and surrounding ranks retained privately.

Open source ↗

E9 / Official Google Chrome website and original mark

Retrieved 10 November 2026, 16:19:56 UTC; HTTP 200. Referenced original Chrome-site image /chrome/static/images/favicons/android-icon-192x192.png independently retrieved. File name identifies its website favicon export; used as Google's official Chrome mark, not evidence of an Android product under investigation.

Open source ↗

E10 / Google brand guidance

Checked 10 November 2026; HTTP 200. Guidance addresses implied endorsement, using Google marks in product branding and imitation of distinctive visual identity. Relevant to the observed combined presentation, not an adjudicated infringement outcome.

Open source ↗

E11 / Apple App Review Guidelines

Retrieved 10 November 2026; HTTP 200. Accurate metadata 2.3, copycats 4.1, intellectual property 5.2.1, privacy 5.1.1, purchases/restoration 3.1.1 and subscriptions 3.1.2 checked for the specific review requests.

Open source ↗

E12 / Qiya support, privacy and terms

All linked pages HTTP 200 on 10 November. Privacy and terms effective 24 July 2026. Working support channel, local-first/app purchase/support-message descriptions, Apple-administered purchases. GitHub Pages hosting is not treated as proof of fraud or lack of a functioning support website.

Open source ↗

E13 / Linked Qiya GitHub profile and repository history

Checked 10 November. Profile location and company fields empty; created 11 October 2025. One public feedback repository. Public commit history shows October 2025 documents and a 24 July 2026 support update. Does not identify a corporate owner or a second Apple account.

Open source ↗

E14 / Yuchang Zhou / corechang support and legal pages

Home, privacy and terms HTTP 200, 10 November. Support identity/contact match the trader panel. General privacy/terms dated 24 September 2025; diagnostics/cloud/support clauses, without a clear app-specific AI analysis path or named AI provider. Email obfuscation decoded only to compare published business contact fields.

Open source ↗

E15 / corechang.org registry RDAP

Retrieved 10 November 16:19 UTC. Registration event 24 September 2025, 06:48:28.491 UTC; Cloudflare registrar. Public registry record does not establish common ownership with another publisher.

Open source ↗

E16 / Qunying Liao Apple software catalog

Retrieved 10 November 16:19 UTC; five current software records plus artist. Numeric developer ID corroborates Chomax and the four portfolio products. Platform support differs between products; not presented as five native Mac apps.

Open source ↗

E17 / Yuchang Zhou Apple software catalog

Retrieved 10 November 16:19 UTC; current Hub app and artist record. One current product is a checked storefront observation, not an all-time history or proof of a prior removal.

Open source ↗

E18 / Fresh Chomax public review records

HTTP 200, checked 10 November. Review 14640450987, Nurse287, three stars, timestamp 7 October 19:49:42-07:00 = 8 October UTC, describes trying to download Chrom. Other records include accurate praise of browser switching and references to a browser. Typeset excerpt is labelled, not claimed as a native capture. No payment or runtime test performed.

Open source ↗

E19 / Fresh Open App public review records

HTTP 200, checked 10 November. Exact records include bj00096 wrong-product payment account 14480426569; Chrome-like placement complaint 14308806270; subscription-surprise review 14079834617; lifetime-restore complaint 14725751964. Dates converted to UTC. The text is evidence of user allegations; transactions and refund decisions not authenticated.

Open source ↗

E20 / Earlier Open App Chrome & Firefox title and icon reference

3 August 2026 Apple capture, 05:09:19 UTC, reviewed in the earlier investigation. Original Apple CDN image referenced by its og:image/app artwork fields recovered 7 November: red/green/yellow curved segments and blue triangular core. Fresh replay verified on 10 November; see E25. Exact icon-change timestamp remains unknown.

Open source ↗

E21 / Later Open App Chrome & Safari title and icon reference

10 August 2026 Apple capture, 07:50:22 UTC, reviewed in the earlier investigation. Same numeric app ID; original associated Apple artwork is a rounded multicolour diamond with a blue inset. Fresh replay verified on 10 November; see E26. Distinguished from the current icon.

Open source ↗

E22 / Earlier published Innovatech–IdeaNest–AppVance investigation

Local reviewed structured record and evidence assets consulted for archived icon provenance, filing-administration associations, supplied-build product/support links and qualified reported-suspension chronology. The full prior report remains separately linked; only relevant evidence is reproduced here. It does not prove common ownership or connect Qiya/Yuchang Zhou to those companies.

Open source ↗

E23 / Google Chrome extension documentation

Checked 10 November. Defines extensions and their APIs/distribution. Used to explain a valid example of software for Chrome without implying extensions are the only legitimate kind of Chrome companion.

Open source ↗

E24 / Google's official Chrome installation instructions

Checked 10 November. Chrome is downloadable at no charge; Mac instructions identify googlechrome.dmg from Google's official download. No installer downloaded or executed during this investigation.

Open source ↗

E25 / 3 August archived Apple page — fresh verification and visible source proof

Fresh HTTP 200 replay checked 2026-11-10T16:45:18.885481+00:00. Memento-Datetime: Mon, 03 Aug 2026 05:09:19 GMT. Archived page identity: Open App for Chrome & Firefox App - App Store. Its og:image and in-page picture srcset use the same dated Apple artwork family as the reproduced icon. Screenshot is a present-day offline rendering, with scripts disabled and original CSS/image bytes supplied locally; a fixed icon width restores the SSR icon slot. Source/date panels are added separately. SHA-256 below identifies decoded archived HTML, not the rendered PNG.

Open source ↗

`SHA-256: a07e73080d28066cf043fad3e8d55fa881cfdf9b8f719c9c92eb5ae49aaf409a`

E26 / 10 August archived Apple page — fresh verification and visible source proof

Fresh HTTP 200 replay checked 2026-11-10T16:45:21.728725+00:00. Memento-Datetime: Mon, 10 Aug 2026 07:50:22 GMT. Archived page identity: Open App for Chrome & Safari App - App Store. Its og:image and in-page picture srcset use the same dated Apple artwork family as the reproduced icon. Screenshot is a present-day offline rendering, with scripts disabled and original CSS/image bytes supplied locally; a fixed icon width restores the SSR icon slot. Source/date panels are added separately. SHA-256 below identifies decoded archived HTML, not the rendered PNG.

Open source ↗

SHA-256: aa66495f604d4a48d7414287aa4799542b7b9856c3c443ad84fc9f6f53321357

E27 / Official Chrome reference in the requested three-icon comparison

Google LLC, app 535886823, bundle com.google.chrome.ios. Original 512px Apple-hosted artwork recorded by E3 and retrieved on 10 November 2026. Used as an official branding reference, not as a Mac product listing. Decoded image pixels preserved.

Open source ↗

E28 / IdeaNest app unavailable in three checked storefronts

Fresh direct HTTP checks on 10 November 2026 at approximately 17:02 UTC: app 6504402138 returned HTTP 404 in US, DE and IE. Raw responses and timed check records retained privately. A previously indexed German page still appeared in search retrieval; direct fresh checks take precedence for current availability. These observations do not establish the enforcement reason or a global account termination.

Open source ↗

SHA-256: 120a307f868f3276b56dabfbd5f107d1b1426b6436a15fbc8d4311160881e416

E29 / IdeaNest developer profile survives but catalog returns no Mac apps

Fresh direct checks on 10 November 2026 at approximately 17:02 UTC: developer 1840069799 returned HTTP 200 in US, DE and IE. Apple lookup with entity=macSoftware returned resultCount 1, consisting only of the developer/artist record, and no software products in each storefront. This is an empty checked Mac catalog, not proof of account suspension.

Open source ↗

SHA-256: f51b38ada6eccea831148ba8f75f930179332fe3b80b14a7a223bb7de5755fc4

Description

Chomax Browser: The Ultimate Browser Switching Tool for macOS

On macOS, when you click a web link, it typically opens in your system's default browser — but what if you want to use a different browser instead? Chomax Browser is the efficient tool designed to solve this exact problem, letting you switch between browsers with a single click and take full control of how your links open.

As a lightweight yet powerful app, Chomax Browser sits quietly in your menu bar, never cluttering your desktop while staying ready for action at all times. When you need to open a link, just click on it in the menu bar, and you'll instantly see a list of all installed browsers — whether it's Safari, Chrome, Firefox, UC, Opera, Brave, Edge, or others — all ready to be selected with one click.

No complicated settings, no browser restarts required. Chomax Browser makes switching between browsers fast, simple, and intuitive. Whether you need to test a webpage in a specific browser temporarily or prefer using different browsers for different tasks, it's the optimal solution for switching between your installed browsers, delivering the freedom to "open links where you want, when you want" in the most convenient way possible.

By using this app, you agree to our Terms of Use, governed by the standard Apple End User License Agreement (EULA). https://www.apple.com/legal/internet-services/itunes/dev/stdeula/

Description

Opener App is a smart link-opening utility for macOS. It helps you review a link before opening it, understand basic website signals, and choose the best way to open the page.

When you open a link, Opener App can collect basic website signals such as domain details, certificate status, page type, redirects, and public registration data, then use AI to provide a risk assessment. You can open links in Safari, Chrome, Edge, and other browsers, or use Clean Text Mode, a menu bar window, or a phone-sized mobile preview.

Key features:

- AI-assisted link risk assessment before opening
- Website details such as domain, site type, operator, certificate, and online history
- Open the same link with different browsers
- Clean Text Mode for distraction-reduced reading
- Menu bar window for keeping a link handy
- Mobile Preview for viewing pages in a phone-sized window
- Local history for reopening previously handled links

Opener App's analysis is informational and does not guarantee that a website is safe. For links marked as high risk, the app asks for confirmation before opening.

Opener App is useful for:

- Users who often handle unfamiliar links
- Users who switch between multiple browsers
- Readers who prefer a cleaner page view
- Developers and creators who need quick mobile webpage previews

DISCLAIMER

Opener App is an independent smart link-opening utility for macOS. It helps users review links, understand basic website signals, and choose how to open webpages using browsers or apps already available on their Mac.

Opener App is not created by, affiliated with, endorsed by, sponsored by, or connected to Apple, Google, Microsoft, Mozilla, Brave, Opera, or any other browser, platform, website, or service provider.

All trademarks, logos, product names, browser names, website names, and brand assets belong to their respective owners, including Safari by Apple Inc., Chrome by Google LLC, Firefox by Mozilla Foundation, Edge by Microsoft Corporation, Brave by Brave Software, Inc., and Opera by Opera Norway AS. Any references to third-party browsers, websites, or services are used only to identify compatibility and supported user choices, and do not imply endorsement or partnership.
