CODEX BRANDING AND PRIVACY DISCLOSURE WARNING · AI ASSISTANTS

Codex name. Codex-like icon. Velqora underneath.

Codex AI - AI Coding Agent uses OpenAI's Codex product name and closely echoes the official icon's terminal symbol and blue-purple palette, while its pictured workspace is called Velqora and the seller is Despina Markou. Its privacy link opens a Velqora license agreement about facial images and AI video generation, leaving the coding app's declared tracking and project-data handling unexplained.

By Alex Kleber · Published 2026-11-02 · Updated 2026-11-02

VISUAL EVIDENCE

Same Codex name, a closely related visual identity

Compare the original Apple listing icon with both official Codex icon variants included in OpenAI's signed ChatGPT desktop app. All use a terminal prompt with a chevron and underscore, a blue-purple gradient and a centered rounded emblem. The investigated app uses a circular orb and dark glyph; official Codex uses a lobed emblem and white glyph on a dark or light tile. The artwork is not pixel-identical. The resemblance matters in combination with the exact Codex product name and Powered by Codex Agent subtitle.

Codex AI — Despina Markou

Original Apple-hosted icon for app 6806240560, retrieved 2 November 2026. E2/E6.

Official Codex — dark

Original icon-codex-dark-color.png from ChatGPT desktop version 26.1023.51421, signed by OpenAI OpCo, LLC. Pixel-preserving metadata cleanup; checked 2 November 2026. E17/E18.

Official Codex — light

Original icon-codex-light.png from the same verified OpenAI desktop app. Alternative official icon, not a second product. Checked 2 November 2026. E17/E18.

LOOK FOR YOURSELF

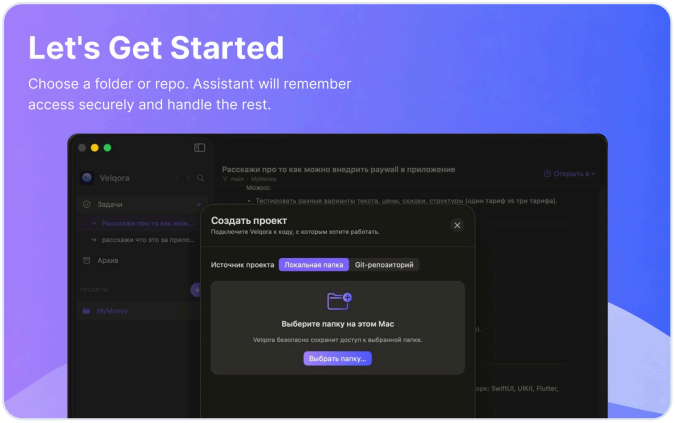

The screenshots tell the story.

All three current original Apple-hosted promotional images are preserved. The first advertises Codex above a Velqora interface; the model selector visibly reads GPT-5.1. Russian interface text is preserved as source evidence, with English captions. These images do not establish which service the executable actually uses.

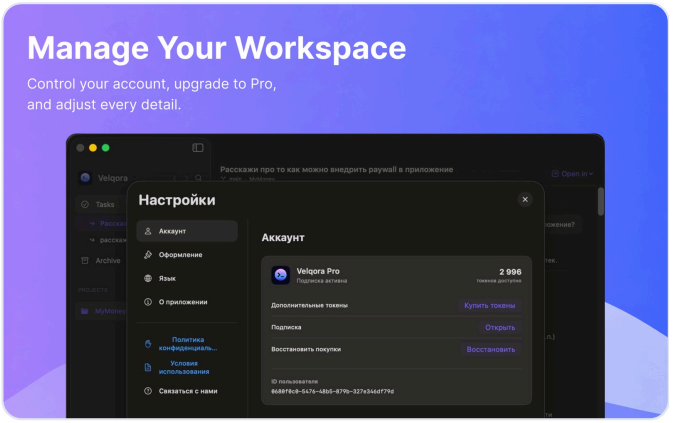

Original Apple-hosted promotion 1. POWERED BY CODEX headline above a Velqora workspace; the lower-right model selector reads GPT-5.1. Retrieved 2 November 2026. E2/E6; source PDF page 4.

Original Apple-hosted promotion 3. Manage Your Workspace: advertised preferences and workspace controls. Retrieved 2 November 2026. E2/E6; source PDF page 4.

WHAT YOU NEED TO KNOW

The Codex name, look-alike terminal icon and Codex-led advertising create a misleading impression of an OpenAI product around a separately sold Velqora workspace.

01

What the app claims

The app adopts OpenAI's Codex name, repeats it in Powered by Codex Agent and POWERED BY CODEX, and pairs it with a terminal-and-gradient icon that closely echoes the official Codex variants.

Original source material and independent current checks, 2 November 2026.

E2 E10 E11 E17 E18

02

What the evidence shows

Apple names Despina Markou as seller; the promoted interface and linked legal document identify Velqora. The privacy document instead discusses facial images and AI video.

Original source material and independent current checks, 2 November 2026.

E2 E5 E7

03

Why the mismatch matters

The combined name, icon and promotion can lead buyers to mistake a separate seller's product for OpenAI's Codex. The privacy link also fails to explain the coding app's declared tracking and project-data handling.

Original source material and independent current checks, 2 November 2026.

E2 E3 E4 E7 E8

WHAT IT COSTS

Nine purchases with unclear periods and token quantities

The public tables list AI Pro, premium and tokens without identifying subscription periods, token quantities or model entitlements. Amounts are preserved without inventing weekly, monthly, yearly or lifetime terms.

Prices displayed in the saved listing

Purchase option	United States	Germany / Ireland
AI Pro — higher price	$49.99	€59.99
AI Pro — lower price	$9.99	€9.99
premium — higher price	$19.99	€22.99
premium — lower price	$6.99	€7.99
tokens — lowest listed price	$9.99	€9.99
tokens — second listed price	$19.99	€22.99
tokens — third listed price	$34.99	€39.99
tokens — fourth listed price	$59.99	€69.99
tokens — highest listed price	$99.99	€99.99

WHO IS BEHIND IT?

The name on the listing.

App name

Codex AI - AI Coding Agent

Developer / seller

Despina Markou

Developer country · App ID 6806240560

Unknown · No account-linked business address or registry record. A name, Russian interface or the unexplained “tr” document suffix cannot establish country.

Apple Germany and Ireland provider panels, checked 2 November 2026: Despina Markou has not identified as a trader and no business country is disclosed. E3/E4.

OpenAI's Codex identity is doing the selling

App Scam DB assesses this as misleading use of OpenAI's Codex branding. The listing takes Codex as its leading name, repeats it in the subtitle and first advertisement, and combines it with an icon that closely echoes the official Codex terminal symbol and blue-purple palette. The pictured workspace instead identifies itself as Velqora. No explicit independence or no-affiliation disclaimer was found in the checked description.

The side-by-side originals show specific overlap: a right-facing terminal chevron and horizontal underscore, rounded strokes, a luminous blue-purple gradient, a centered emblem and a dark surrounding field. Differences are also visible: the investigated mark is dark on a circular orb, whereas official Codex uses a white mark on a lobed emblem, with dark and light tile variants. These are different drawings with a closely related overall identity. The combined name and visual presentation support the confusion finding; no numerical similarity score is used as a copying verdict.

The same promotion shows GPT-5.1 in the model selector. That is a visible marketing detail, not verification of the actual model endpoint, a Codex agent implementation or OpenAI authorization. The app describes general chat, research, tasks and code assistance; those promises alone do not demonstrate the agent functions of the official product.

OpenAI's brand guidance prohibits misleading endorsement or sponsorship, bars designing a similar logo within its logo-use rules, and requires its marks not to dominate the operator's own branding. These provisions are relevant to the observed Codex name, close visual treatment and prominent promotional wording. The report identifies apparent brand and intellectual-property misuse; it does not claim a court judgment or a takedown decision by OpenAI.

OpenAI also publishes Codex integration components, including an SDK and app-server. A third-party developer can therefore build on Codex. The phrase Powered by Codex is not technically impossible in itself; the unresolved issue is whether this app uses it accurately and explains its separate identity clearly.

Codex dominates; Velqora identifies the workspace

Question	Investigated app	Official reference
Product identity	Codex AI - AI Coding Agent; Velqora in pictured workspace	Codex, published by OpenAI
Seller	Despina Markou	OpenAI
Primary route	Separate Mac App Store listing and purchases	OpenAI's official Codex product route
Integration evidence	Codex marketing and GPT-5.1 selector; executable untested	Official SDK / app-server available
Icon treatment	Terminal >_ on blue-purple orb, dark glyph and dark field	Terminal >_ on blue-purple lobed emblem, white glyph; dark/light tiles

OpenAI's official Codex product OpenAI brand guidance

The verified connection is Velqora

Velqora is not merely a coincidental search result. Its name appears in the currently advertised app window and repeatedly in the privacy-link document, which also names Despina Markou. Those are direct listing-to-product-to-provider connections. They establish a shared product identity, without requiring an assumption about another person.

An indexed AppAgg entry independently labels a Mac assistant Velqora under Despina Markou and associates it with version 1.2, updated 15 September. Its text and legal link match this product. The current direct page exposed only a minimal shell, so the numerical Apple ID could not be recovered there. The record supports the Velqora lead but does not prove a separate app or date the change to Codex.

The present listing is internally inconsistent regardless of whether it was renamed. A dated initial Apple capture showing Velqora and a later Codex capture would be needed to establish the precise transition. This investigation did not obtain that pair and does not present a review-bypass sequence as confirmed.

The verified connection is Velqora

Connection	Evidence strength	Supported conclusion
Codex AI listing → Velqora workspace	Original current promotional image	Direct product-identity connection
Listing → Velqora EULA → Despina Markou	Linked document and matching seller	Direct legal/provider connection
Indexed Velqora record → same developer	Secondary index; matching text and legal link	Corroborating history lead
Velqora → separate Apple account	No second numerical account found	Not established

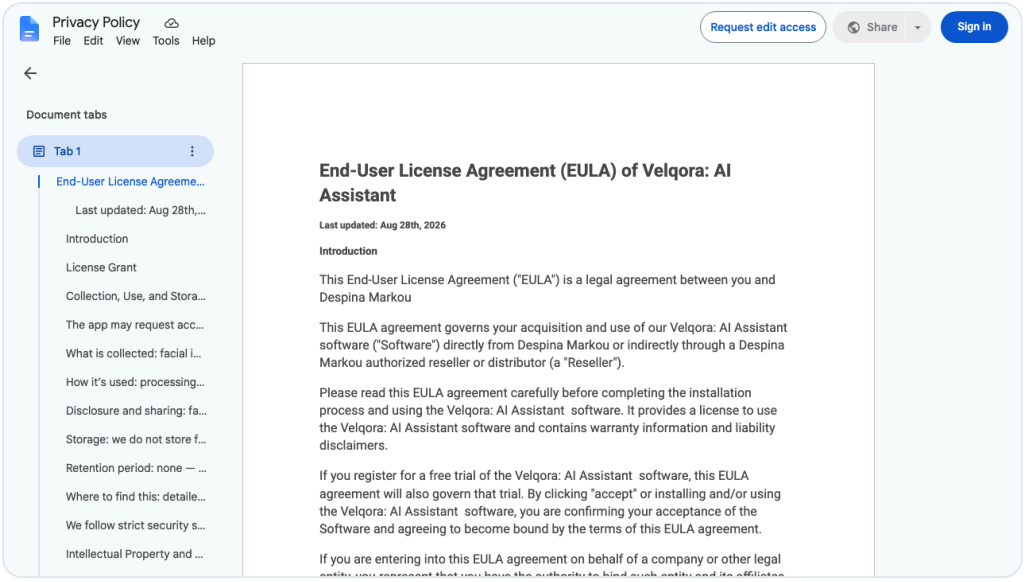

A coding app links to facial-data video terms

The App Store’s Privacy Policy link opens a document whose Google Docs title is Privacy Policy but whose actual heading is an End-User License Agreement for Velqora: AI Assistant. This is a substantive content mismatch, not an inaccessible link. It names the correct seller but mainly provides a software license, restrictions, warranty-related language and termination terms.

Its data section describes camera/gallery facial images used for AI video generation or animation. It says processing may happen locally or on secure servers, with immediate deletion and no third-party sharing of facial data. The document then points readers to four named privacy sections that are absent from the full exported text.

The material does not explain who receives coding prompts, uploaded source code, project resources or web-search queries, which AI service processes them, or how their retention works. Facial-image deletion promises do not answer those questions. This matters because the app invites users to work with source code and project materials.

The store separately declares identifiers, usage data and diagnostics used for tracking across other companies’ apps and websites. The linked document does not explain that tracking. Its facial-data restrictions are narrow; they should not be misrepresented as a blanket promise that no tracking occurs. The verified problem is missing and mismatched disclosure. The document does not establish that this coding executable actually captures faces.

Original live Google Docs screenshot, 2 November 2026. E7. The document-type and product-name mismatch is visible without editorial reconstruction.

A coding app links to facial-data video terms

Required explanation	What the link actually supplies
Product and document identity	Velqora EULA under a Privacy Policy label
Coding inputs and project resources	No clear processing/recipient/retention account
Tracking declared in the store	No matching tracking explanation
Facial images / video generation	Detailed clauses for a different stated use case
Referenced privacy sections	Four named sections not present in full text

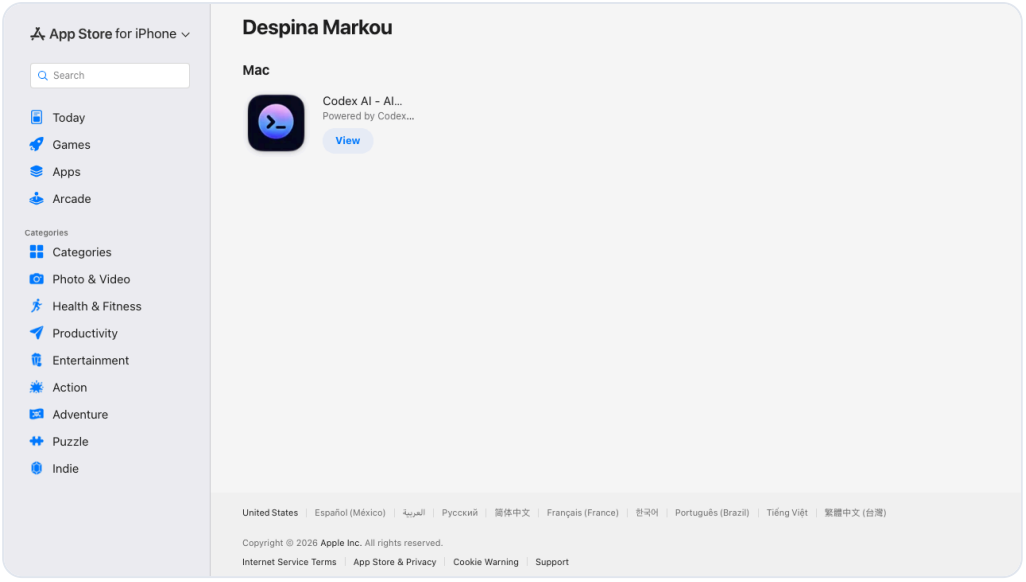

Who is behind the listing?

Apple identifies Despina Markou, developer ID 6776260251, as the seller. The live US developer page and software lookup expose one current app: this listing. That result describes the checked storefront today; it does not prove the account has never sold another app.

The terms disclose a Gmail owner-contact address. That exact mailbox, the two public document IDs, bundle ID, app/developer IDs and seller/product combinations were searched. Existing local reports were checked for matching identifiers. No independently corroborated bridge to another Apple seller account or registered company was found.

The terms share broad template language with other AI-app documents in the report library. The contact address and document IDs differ. Common boilerplate, Google Docs hosting or a Gmail mailbox are not strong enough to merge operators. Search results for unrelated businesses called Velqora and people sharing the seller's name were excluded.

No source checked established a previous Apple ban, a second account opened after termination or a separate fraud case by this seller. The actionable findings concern the current listing's Codex-led identity and privacy disclosures. The account link is supplied below so its catalog can be checked directly.

Current original US developer catalog, 2 November 2026. E5. Lookup corroborates the displayed one-app portfolio.

Who is behind the listing?

Identifier	Observed result
Apple developer 6776260251	Despina Markou; one current US app
App 6806240560	Codex AI - AI Coding Agent
Bundle com.des.311c0d34	Same app in exact-ID Apple lookup
Velqora	Current interface and linked EULA
Second Apple account / registered company	No verified identifier bridge found

Despina Markou — Apple developer account

No disclosed business country

Germany and Ireland both say Despina Markou has not identified as a trader. Neither checked panel supplies a business-country record. The provider name, English/Russian language support and Russian promotional interface do not establish residence or nationality.

The linked EULA ends its governing-law clause with the unexplained text “tr”. That is an incomplete jurisdiction disclosure, not verified evidence of Turkey. The separate terms refer to the owner’s location for law and venue without naming it. No registered company or account-linked location was established, so the report’s country is Unknown.

No dedicated Developer Website appears in the checked listing. The legal links are hosted on Google Docs. Hosted documents can be legitimate; here the concrete accountability problem is the combination of absent business-location information, a mismatched privacy document and incomplete legal drafting.

No disclosed business country

Source	Disclosure	Country
Apple Germany / Ireland	Non-trader; no location record	Unknown
Velqora EULA	Unexplained governing-law suffix tr	Not a country attribution
Terms	Owner-location law and venue without named place	Unknown

What buyers are being offered

The public purchase table shows four AI Pro/premium amounts and five token amounts. Repeated labels do not disclose the period for the subscriptions, the number of tokens supplied or the models each purchase unlocks. No weekly-to-yearly calculation can be justified from this record.

The description says subscriptions renew automatically and gives Apple-account cancellation instructions. The promotion separately shows a token balance and a buy-more-tokens control. This supports checking both subscription and usage-credit conditions before paying; it does not establish that the app charges twice for the same service.

A payment to this seller should not be assumed to grant an official OpenAI plan. The investigation did not buy a plan or establish the actual backend, included usage or connection to an existing OpenAI account.

The reviews do not establish buyer deception

The current US review feed returned six entries, all carrying five stars, dated from 22 September to 11 October 2026. They describe coding assistance, brainstorming, project organization and workflow convenience. None of these entries says the buyer mistook the app for official Codex or reports a refund dispute.

The exact-ID lookup reports zero aggregate ratings, while the rendered store says there are not enough ratings for an overview and still displays individual reviews. These are distinct Apple outputs. The report records the discrepancy rather than claiming there are no reviews or inventing a definitive aggregate rating.

The reviews use broadly similar, general language. That alone does not establish coordinated or purchased reviews. No review-authenticity verdict is made; the document and identity mismatches stand independently of the reviews.

What the dated record establishes

The legal documents self-date to 28 August 2026. Apple records the first app release on 9 September, version 1.2 on 15 September and current version 1.5 on 7 October. The source analysis and independent investigation are dated 2 November. A document’s printed date is not independent proof of when it first became public.

The exact current US URL returned a Wayback capture at 16:03:41 UTC on 2 November. Its replay opened. The filtered Velqora slug-prefix query returned no records. The secondary indexed Velqora entry is a useful historical lead, but it does not replace a dated Apple before/after sequence or demonstrate intentional evasion of App Review.

Apple's accurate-metadata rules 2.3 and 2.3.1, copycat rule 4.1 and intellectual-property rule 5.2.1 are relevant to the dominant Codex branding and implied identity. Privacy rule 5.1.1 is relevant to the document linked as the privacy policy. Subscription rule 3.1.2 is relevant to clear paid-access information. These are grounds for review of the observed presentation; no Apple enforcement decision was obtained.

Description

Intelligent AI assistant designed to help you manage everyday tasks, work with information, explore ideas, and support coding workflows from one streamlined workspace.

Ask questions, organize projects, research topics, study new subjects, create tasks, and work through complex problems with AI-powered assistance. Whether you are planning your day, learning something new, researching online, or working with code, the app helps you move from questions to results more efficiently.

AI ASSISTANT FOR EVERYDAY TASKS

Use AI assistance for a wide range of personal and professional activities:

• Ask questions and receive detailed responses
• Study and explore new topics
• Brainstorm ideas and create plans
• Perform smart web research
• Analyze complex questions with deeper reasoning
• Create and organize tasks
• Keep conversations and projects structured

AI-POWERED CODING ASSISTANCE

Support software development workflows with AI-powered tools for analyzing code, exploring solutions, and improving development processes.

Features include:

• Analyze source code
• Ask programming questions
• Review and improve code
• Explore implementation approaches
• Identify potential issues
• Understand technical concepts
• Organize coding-related conversations and projects

PROJECT WORKSPACE

Create dedicated projects to keep related conversations, tasks, and materials organized. Work with supported project resources and return to your workspace whenever you need to continue.

SMART WEB SEARCH

Explore information from the web through your AI assistant. Research topics, compare information, and use collected insights to support planning, learning, and decision-making.

DEEP THINKING

For questions that require more detailed analysis, AI assistance can help break complex topics into smaller parts, evaluate available information, and provide structured answers.

MANAGE YOUR WORKSPACE

Access settings, manage your subscription, organize projects, and adjust available preferences from one central place.

Built for users who want a single AI workspace for research, productivity, learning, planning, and coding assistance.

Subscription Information

Subscription Payment: Subscription payments will be charged to your iTunes Account at confirmation of purchase and at the beginning of each subsequent renewal period. Your subscription automatically renews unless canceled.

Subscription Cancellation: You can cancel your subscription in your iTunes Account Settings at least 24 hours before the end of the current subscription period. Cancellation will take effect the day after the last day of the current subscription period, and you will be downgraded to the free version of the service.

Privacy Policy: https://docs.google.com/document/d/1Qi4EaNYy2gHfxcOU15xH5IR6B61ni5_rQLRSOSERJHM/edit?usp=sharing
