

A near-mirrored Flightradar24 icon. A separate weekly bill.

Ajwa Iram's m.ai closely imitates Meta's Muse icon and promotes Muse model/API access; the same developer also publishes Flightradar: Flight Tracker 24. Flightradar: Flight Tracker 24 uses a near-mirrored version of Flightradar24's radar icon and rearranges its familiar name, but the seller is Ajwa Iram. Its \$4.99 weekly plan has an estimated annual cost of \$259.48. The listing says Data Not Collected while the developer's Privacy Policy describes server records. The developer's terms still contain [COUNTRY] (an unfilled template placeholder where the applicable jurisdiction should be named, according to section 17 of the published Terms of Service).

VISUAL EVIDENCE

Two official brands. Two closely imitated icons. One developer.

The reporter's editorial assessment is that this developer is "a master at copying official icons." The comparisons show the basis for that criticism: a near-mirrored Flightradar24 radar and a close imitation of Muse's blue handwritten mark, with a dot and underline added. This describes the observed visual presentation; it does not establish copied source code or a right-holder enforcement decision. All four images below are original assets from the respective Apple listings.

1.0 - 26 October 2026

First released

26 October 2026

The official radar motif appears almost mirrored

The investigated icon closely reproduces the distinctive composition of the official Flightradar24 reference: a blue square, thick white concentric radar rings, small white targets, a central dot and a translucent sweeping beam. The sweep points down-right in Ajwa Iram's icon and down-left in the official image, with the target arrangement appearing in the opposite orientation. Corners, shading and spacing differ. This is a near-mirrored visual imitation, rather than two unrelated icons that merely share a colour.

The title adds to the confusion. Flightradar: Flight Tracker 24 rearranges the same conspicuous terms found in Flightradar24 | Flight Tracker. App Scam DB assesses the combined name and near-mirrored icon as a misleading copycat-style presentation, likely to be mistaken for a Mac offering from the established service. Search ranking effects were not measured.

The seller is Ajwa Iram, developer ID 6811074479. The official product is published by Flightradar24 AB, developer ID 726928879. The independent listing includes a general disclaimer denying affiliation with other flight-tracking services. That wording should be read alongside the prominent name and icon; it does not explain their close visual resemblance.

The screenshots advertise a separate Mac interface with flight lists, globe views and an AI chat. The comparison establishes branding imitation; it does not establish that the developer copied Flightradar24’s source code, database or complete application. No right-holder authorization or enforcement finding concerning this app was obtained.

Observed product	Mac app	Official iPhone/iPad listing

Investigated Mac app Official Flightradar24 app Official brand-owner terms

Sources: E1, E3, E4, E5, E16. Visual and live-source checks: 27 October 2026.

Data Not Collected versus a policy describing server-side records

The App Store says Data Not Collected. Its linked policy, effective 11 September 2026, applies to Ajwa’s mobile and desktop portfolio and expressly includes Flight Tracker Live Radar. It describes user text, flight preferences, diagnostics, Firebase anonymous identifiers and subscription status, depending on the app and features used.

The policy also describes retained server logs and anonymous usage counters, Google Firebase infrastructure, aviation APIs, OpenSky Network, Open-Meteo, Apple MapKit and AI requests routed through a backend such as OpenRouter. These are the developer’s published disclosures, not services independently detected in an installed app.

Apple’s definition distinguishes data retained off-device from information processed only to service a real-time request, and some narrowly defined optional disclosures are exempt. The generic policy does not map its server records and identifiers to this app or explain how the no-collection label fits them. That unresolved disclosure mismatch warrants review; it is not proof that every described data type is actually collected by this binary.

The advertised Flight AI Chat Assistant makes the AI clause relevant to consumers: the policy says prompts and saved context may be sent after consent. No installation, network interception or security test was performed.

Anonymous or pseudonymous identifiers (including a Firebase anonymous ID used so our servers can rate-limit abuse)

Linked privacy policy Apple's collection definition

Sources: E1 pages 2 and 8-10; E3, E7, E17. Both the label and full policy body checked on 27 October 2026.

Google Sites pages and an unfinished country clause

The listing provides a Google Sites privacy page and links Google Sites terms in its description. Both pages were publicly readable without signing in. No separate developer presentation website was linked from the checked US listing.

The developer's published Terms of Service leave [COUNTRY] in section 17, the governing-law clause (this is an unfilled template placeholder: the document does not name the country whose laws are intended to govern the agreement). It appears in the Terms of Service, not in the Privacy Policy. The two documents are linked separately from the listing and are hosted on Google Sites.

The developer's Privacy Policy identifies the publisher as Ajwa and provides a support contact, but does not disclose a registered company name, registration number or business location. The terms likewise do not identify a business city or country. The unfinished jurisdiction clause is a concrete document-quality and accountability concern; free website hosting alone does not establish fraud. A governing-law choice would describe the contract's intended legal framework, rather than necessarily establishing where the developer operates.

Both documents are dated 11 September 2026 and cover current and future apps under the same account. The terms impose a minimum user age of 13, describe AI and flight-data caveats, and say a lifetime purchase lasts while the app is operated. These provisions do not resolve the incomplete jurisdiction clause.

These Terms are governed by the laws of [COUNTRY], excluding conflict-of-law rules, except where Apple's terms or local consumer law requires otherwise. Mandatory consumer rights in your country of residence still apply.

Original browser capture, 27 October 2026: section 17 leaves the jurisdiction as [COUNTRY]. Source: E8.

Published terms

Sources: E3, E7, E8. Full linked page bodies read on 27 October 2026.

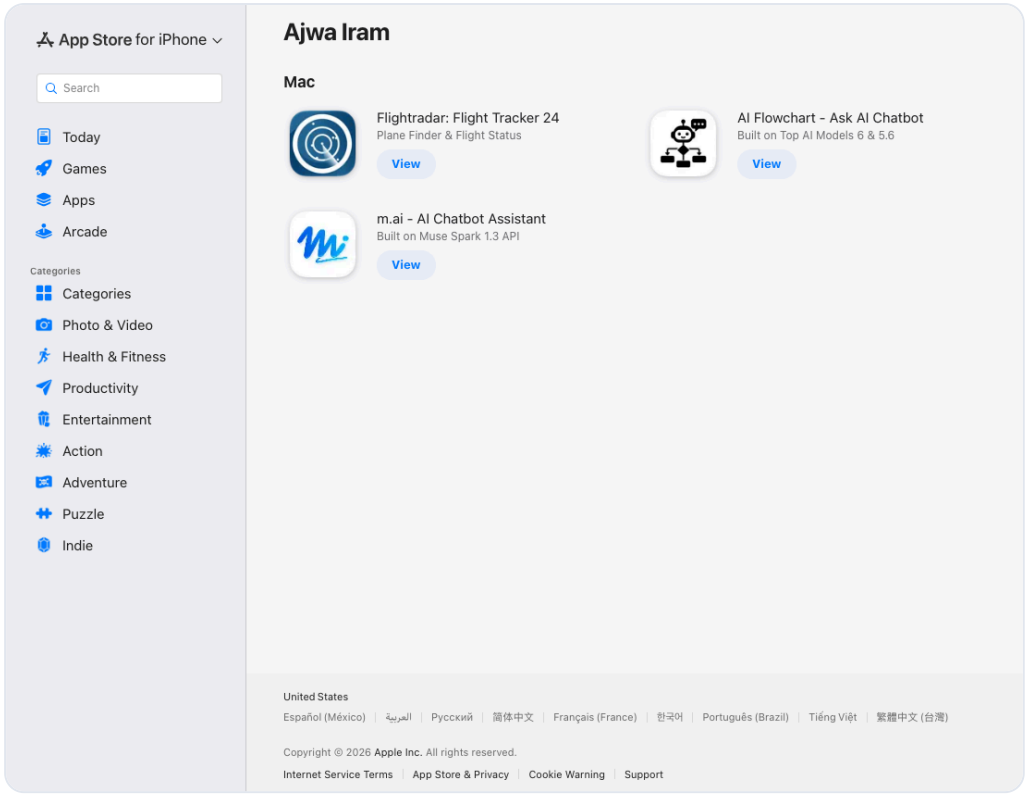

Ajwa Iram: three Mac apps with the same legal pages

Apple's current US catalog directly links three apps to Ajwa Iram, developer ID 6811074479. The flight tracker and both AI apps use the same copyright identity and the same privacy and terms URLs. The legal pages also use a single matching support contact. These are direct portfolio links within one Apple account.

The earliest listed portfolio release is m.ai - AI Chatbot Assistant on 24 September 2026, followed by AI Flowchart - Ask AI Chatbot on 10 October and the flight tracker on 26 October. The span is 33 days to the source capture. This is an earliest observed release date, not proof of when the Apple account was created.

The two AI listings also show Data Not Collected while linking the shared policy. The flowchart app describes model access and an independent third-party status; m.ai uses a model/API-led subtitle. Those claims identify the portfolio's marketing context and were not independently tested.

Exact-identifier research did not establish a company registration, a professional profile tied to these app IDs, a geographic business location, or common control with a different developer account. The name, Google Sites hosting and a name-plus-digits Gmail contact pattern do not establish a link to the developers in other App Scam DB investigations. Unrelated name matches were excluded.

Sources: E1 page 3; E5, E6, E7, E8, E9, E10, E19. Checked 27 October 2026.

The same developer’s m.ai closely imitates the Muse icon

Ajwa Iram’s m.ai - AI Chatbot Assistant, app 6813026972, uses a handwritten blue-to-cyan m-shaped mark on a white rounded square. The official Muse from Meta icon has a closely matching slanted, thick, rounded multi-stroke m on white. m.ai adds a detached dot, a sweeping underline and changes the last stroke, gradient and background treatment. The resemblance is much more specific than sharing the colour blue; App Scam DB assesses the icon as a close imitation of Muse’s visual identity, with added details.

The official Muse app is published by Meta Platforms, Inc., developer ID 284882218. m.ai is published by Ajwa Iram, developer ID 6811074479, the same account as the flight tracker. Both Apple records and the repeated privacy/terms URLs establish that portfolio connection; they do not establish a Meta affiliation.

m.ai’s exact subtitle is Built on Muse Spark 1.3 API. Its first promotional image says Build on Muse AI API and displays Spark 1.1, Spark 1.3 and Glimmer. The advertised interface labels itself Muze AI - AI Chatbot Assistant. These different visible names are recorded as current marketing, not as proof of a dated rename. No explicit statement of independence from Meta was found in the retrieved m.ai description.

Meta’s own developer announcement confirms Muse Spark 1.3 and public access through Meta Model API. An independently built app can therefore plausibly use that model. The concern is the combined icon and presentation, not an assertion that third-party API access is impossible. The listing alone does not establish which model m.ai actually serves, whether it has an authorized integration, or whether its marketing has the brand owner’s approval.

The original promotions show a Mac workspace with chat, artifacts, file analysis, an AI detector and plagiarism tools. Meta’s reference imagery promotes its personal agent, including action approvals. Similar category features do not prove copied code or a complete cloned application. The documented finding here is icon imitation and potential brand confusion, supported by a direct seller comparison.

Separate publishers and distinct app IDs behind similar marks

Field	m.ai	Official Muse
App ID	6813026972	6760173601
Seller	Ajwa Iram	Meta Platforms, Inc.
Developer ID	6811074479	284882218
Bundle ID	ajwa.ai.chat.assistant.aritifacts	com.facebook.hatch
First release in Apple lookup	24 September 2026	8 September 2026
Icon additions in m.ai	Dot and underline	No matching dot/underline
Reference platform	Mac	iPhone/iPad listing; Meta also offers Mac directly

Investigated m.ai Mac app Official Muse from Meta Meta’s official Muse site Meta’s API announcement

Sources: E21, E22, E23, E24, E25, E27; shared-account context E6-E10. Current observations: 27 October 2026.

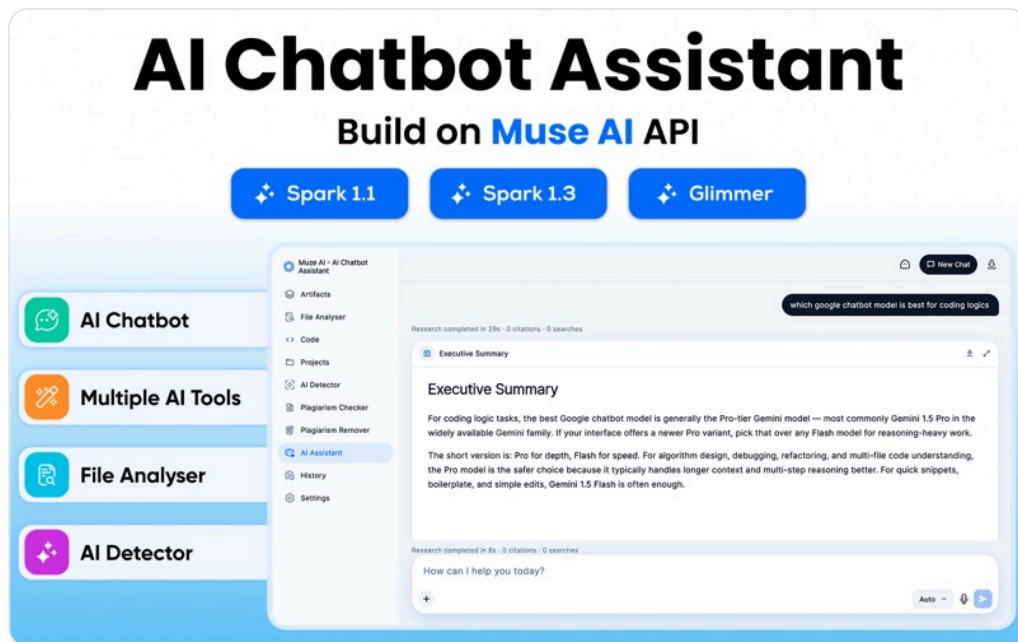

m.ai’s original advertisements and its separate subscription bill

All six original m.ai promotional assets are reproduced below, together with two official Muse reference images. The first promotion combines the close visual identity with an explicit Muse model/API claim. Original files are preserved locally without file metadata; screenshots illustrate published marketing, not features verified by installing either app.

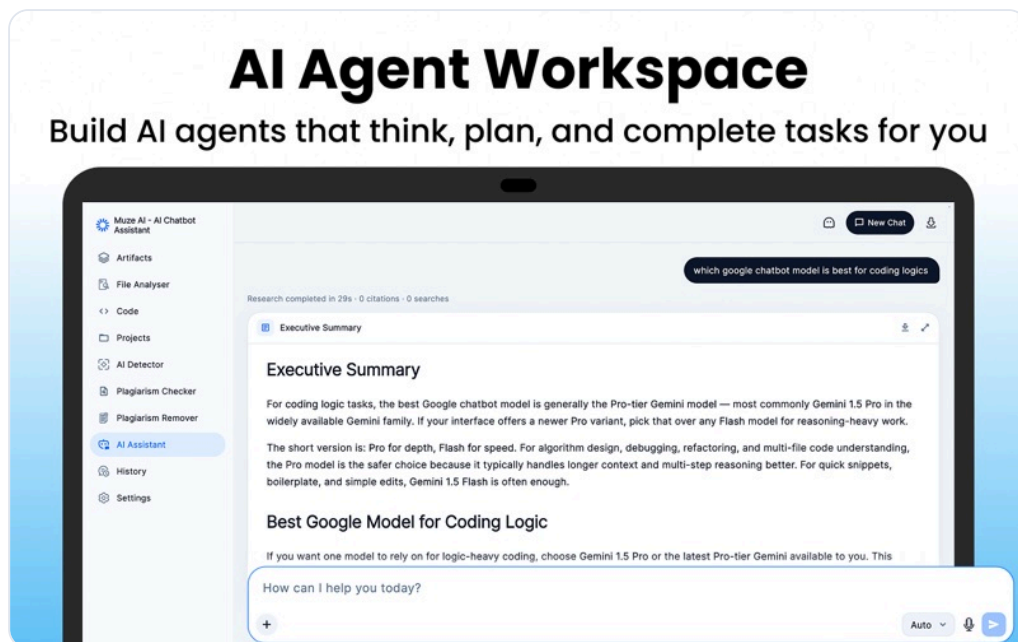

m.ai lists \$5.99 weekly, \$14.99 monthly, \$59.99 yearly and \$99.99 lifetime. Continuous renewal of the weekly offer has an estimated annual cost of \$311.48, about 5.19 times the listed yearly offer. Prices and plan benefits are distinct from Meta’s own service and from the flight tracker; no purchase or like-for-like service test was performed.

m.ai’s Apple privacy label also says Data Not Collected while linking the same Ajwa policy describing identifiers, user text, uploaded material, AI providers and server records. The policy is conditional across the portfolio and does not resolve how those practices apply to this app. This is a disclosure question requiring explanation, not a measurement of m.ai’s runtime traffic.

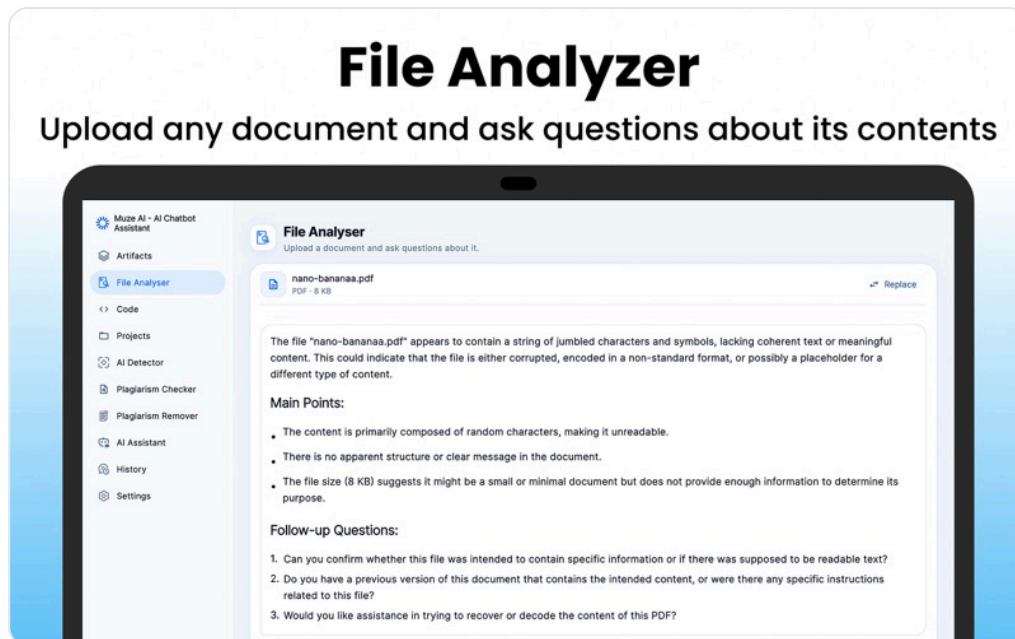

Earlier archive index queries did not yield a usable historical m.ai capture. The investigation cannot establish that this app first launched with neutral branding and was later transformed. What is documented is a second current brand-imitation concern within the same developer account.

m.ai US purchase offers - separate from the flight tracker

Purchase label	Listed US price	Billing type
Weekly	\$5.99	Auto-renewing
Monthly	\$14.99	Auto-renewing
Yearly	\$59.99	Auto-renewing
Lifetime	\$99.99	One-time purchase

Sources: E21, E22, E25, E26; privacy context E7, E17. Prices and imagery checked 27 October 2026.

Germany and Ireland do not disclose a provider location

The primary app's German and Irish URLs returned Apple's page-not-found response. Apple's lookup API returned zero results for this numeric app ID in both storefronts. No provider/trader panel, business address or declared country was obtained.

Checks of the related m.ai app in those storefronts also returned 404. The Google Sites pages do not fill that gap: their jurisdiction is a placeholder and they provide no business location. Country is recorded as Unknown. This is an access/disclosure result, not evidence of an Apple removal or a nationality finding.

The reporter suspects Pakistan as the country of operation, based on similarities they perceive with patterns in earlier App Scam DB investigations. This is the reporter's hypothesis about recurring presentation and publishing practices. No account-linked address, company record or provider disclosure establishes Pakistan as this developer's business location.

Sources: E11, E12, E13, E7, E8; Germany and Ireland lookup results. Checked 27 October 2026. Reporter's pattern-based country suspicion: E20.

The weekly plan has an estimated annual cost of \$259.48

The US purchase table lists Weekly at \$4.99, Monthly at \$9.99, Yearly at \$29.99 and Lifetime at \$59.99. The listing expressly says the auto-renewing plans unlock the same Pro access.

At unchanged weekly pricing, the estimated annual cost is \$259.48, about 8.65 times the \$29.99 yearly plan. The difference is \$229.49. These are continuous-renewal estimates; actual calendar-year billing can vary. No purchase or paywall test was performed.

The description discloses automatic renewal and limited free searches. The concern is the large price gap and whether a consumer who recognizes the name and icon realizes this is a separately billed third-party product. Price alone does not prove fraud.

Sources: E1 pages 2 and 4; E3. US prices checked 27 October 2026.

A new release, not a documented later rebrand

Apple lookup records the flight tracker's first release on 26 October 2026 and version 1.0. The supplied capture and the accessible Wayback replay are from 27 October 2026. The same-day replay shows the same listing identity.

Earlier-history queries across the app ID, storefronts and URL variants supplied no usable earlier branding record. A generic launch followed by a later icon/name change, an earlier ban or a replacement account was not established for this developer. The supplied policy archive link timed out during replay; the live policy and the original PDF capture were reviewed instead.

Verified same-day listing replay

Sources: E1, E5, E14, E15. Archive checks: 27 October 2026.

The name, icon and privacy disclosures warrant review

Apple's accurate-metadata rules (2.3 and 2.3.7), copycat provision (4.1) and intellectual-property rule (5.2.1) are relevant to a product title and near-mirrored icon that resemble an established service. Flightradar24's official terms assert ownership of its branding. These sources support a review request; no final infringement or Apple enforcement finding was obtained.

Privacy rule 5.1.1 and Apple's privacy-label instructions are relevant to the mismatch between the no-collection label and the shared policy's server-side records. The unfinished terms and limited business identification add an accountability concern. The documented result is a branding, billing and privacy warning; the research did not test flight accuracy, malware or unauthorized payment activity.

E13 / Related-app EU check - m.ai

Checked 2026-10-27T05:39:33.441Z. HTTP 404. Germany and Ireland pages both returned HTTP 404. These checks supplied no business-location information.

[Open source ↗](#)

E14 / Archived US listing - 27 October 2026

Checked 2026-10-27T05:39:41.061Z. HTTP 200. Replay opened successfully. Same-day name, publisher, offer and privacy text reviewed; not evidence of a previous generic identity or later rebrand.

[Open source ↗](#)

E15 / Earlier archive searches and policy replay attempt

27 October 2026. CDX queried the supplied URL with and without query string, app ID across storefronts/slugs, legacy iTunes URLs and policy path. Only the supplied same-day US listing hit appeared in these queries; no earlier usable branding comparison obtained. Supplied policy replay timed out; not described as verified. Empty index responses do not prove that no other archive exists.

[Open source ↗](#)

E16 / Flightradar24 - official terms and trademark identity

Read through the web research tool on 27 October 2026; document dated 23 June 2026. Identifies Flightradar24 AB and asserts rights in Flightradar24 branding in section 10. Browser capture attempt returned HTTP 403; no screenshot of that blocked response is treated as the terms body. No brand-owner decision about this specific app obtained.

[Open source ↗](#)

E17 / Apple - App Privacy Details

Checked 2026-10-27T05:39:40.790Z. HTTP 200. Collection definition and optional-disclosure criteria read. Retained off-device data and third-party partners matter; real-time-only processing and narrowly defined exceptions must be distinguished.

[Open source ↗](#)

E18 / Apple - App Review Guidelines

Checked 2026-10-27T05:39:41.041Z. HTTP 200. Rules 2.3, 2.3.7, 4.1, 5.1.1 and 5.2.1 reviewed. These are review grounds, not an Apple finding against the developer.

[Open source ↗](#)

E19 / Developer and contact research

27 October 2026. Searched exact seller name, Apple developer ID, app ID, bundle ID, linked policy URL and policy contact. Compared those identifiers with existing local report sources. Three-app common-account linkage is documented. No independently corroborated company registration, personal professional profile, business country or different-account operator connection was established. Name-only and unrelated search matches were excluded.

E20 / Reporter's country hypothesis - Pakistan

On 27 October 2026 the reporter asked to attribute Pakistan on the basis of patterns perceived in earlier investigations. Recorded as the reporter's suspicion. No new account-linked country evidence accompanied the request; the country-disclosure field remains Unknown.

E21 / m.ai - refreshed listing, subtitle, promotions and pricing

Retrieved 2026-10-27T06:06:19.125Z; HTTP 200. Exact app ID 6813026972. Subtitle Built on Muse Spark 1.3 API, blue handwritten icon, six promotions, purchase offers and Data Not Collected label reviewed. No explicit Meta independence disclaimer found in the retrieved description. No installation or model-access test performed.

[Open source ↗](#)

E22 / Official Muse from Meta - Apple listing

Retrieved 2026-10-27T06:06:44.470Z; HTTP 200. Official app 6760173601 names Meta Platforms, Inc. and developer ID 284882218. Original icon and promotional images obtained from Apple; unlike the investigated Mac app, this reference listing is for iPhone/iPad.

[Open source ↗](#)

E23 / Meta - official Muse product page

Retrieved 2026-10-27T06:06:44.473Z; HTTP 200. Public page body read. Its App Store link targets 6760173601 and it describes Muse on mobile and Mac. Confirms the official product's identity; does not validate m.ai as a Meta product or partner.

[Open source ↗](#)

E24 / Meta Connect - Muse Spark 1.3 and Meta Model API

Retrieved 2026-10-27T06:06:27.597Z; HTTP 200. Official article dated 24 September 2026, read on 27 October. Confirms Muse Spark 1.3 and general API availability. Third-party model access is possible; no access credentials or actual model served by m.ai were checked.

[Open source ↗](#)

E25 / Apple lookup - m.ai and official Muse exact IDs

Retrieved 27 October 2026; HTTP 200. Records preserve seller/developer IDs, bundle IDs, release/version dates, original 512-pixel icon URLs and screenshot URLs. m.ai bundle is ajwa.ai.chat.assistant.aritifacts, preserving Apple's spelling.

[Open source ↗](#)

E26 / m.ai earlier-history queries

27 October 2026. CDX queries for app ID 6813026972 across US slugs, all storefronts and legacy iTunes URLs returned empty lists. No earlier branding replay was obtained. These access results do not prove that no archive exists; a previous generic identity or rename date is not established.

[Open source ↗](#)

E27 / Official Muse publisher catalog - Meta Platforms, Inc.

Retrieved 2026-10-27T06:06:44.473Z; HTTP 200. Apple developer account 284882218 directly lists Muse from Meta and other Meta products. Distinct from Ajwa Iram account 6811074479.

Mac (5)

Description

Track any flight in seconds, right from your Mac.

Search a flight number, route, or airline and get its live status instantly — departure and arrival times, delays, terminals, gates, and the aircraft's current position, altitude, and speed while it's in the air.

Features

Live flight status — real-time updates worldwide, from scheduled to airborne to landed.

Position on the map — see where your flight is right now, with altitude, speed, and heading.

Search by anything — flight number, airline, or departure-to-arrival route.

Airport timetables — arrivals and departures for over 10,000 airports.

Flight progress — a live timeline showing distance covered and estimated time to landing.

Delay tracking — actual vs. scheduled times at both ends, so you know exactly how far behind a flight is running.

Gate & terminal info — departure and arrival gates, terminals, and runway times where available.

Airline lookup — browse 13,000+ carriers with their IATA and ICAO codes.

Aircraft details — registration, aircraft type, and model for the plane operating your flight.

Route explorer — see which airlines fly a given route and when.

Airport directory — codes, cities, countries, and time zones for airports worldwide.

Saved flights — pin the flights you're following and refresh them with one click.

Auto-refresh — set your own update interval, or refresh manually whenever you like.

Local time zones — every time shown in the airport's local time and yours, side by side.

Recent searches — jump straight back to flights you've looked up before.

Share & copy — send flight details to anyone in a clean, readable format.

Menu bar quick view — check a tracked flight without opening the window.

Built for Mac — native performance, Dark Mode, keyboard shortcuts, and multi-window support.

Covering 13,000+ airlines, 10,000+ airports, and 250+ countries.

Disclaimer

Not affiliated with, endorsed by, or associated with any airline, airport, aviation authority, or other flight-tracking service. Airline and airport names are used for identification only. Flight data is provided for informational purposes and should not be relied upon for operational or safety-critical decisions.

Subscriptions

You can try the app with a limited number of free searches. Unlock unlimited searches and the full tracking experience with a subscription or a lifetime purchase.

Auto-renewable subscriptions (all plans unlock the same Pro access): • Basic — 1 week • Pro — 1 month • Plus — 1 year

Optional one-time purchase: • Lifetime — pay once for ongoing Pro access; this is not a subscription and does not auto-renew.

Prices are shown in the app before you buy and may vary by region. Payment is charged to your Apple ID at confirmation of purchase.

Subscriptions automatically renew unless auto-renew is turned off at least 24 hours before the end of the current period. Your account will be charged for renewal within 24 hours prior to the end of the current period. You can manage or cancel subscriptions in your Apple ID account settings on the App Store after purchase. Any unused portion of a free trial, if offered, is forfeited when you purchase a subscription.

Restore previous purchases anytime from Settings → Restore Purchase.

Privacy Policy

Privacy Policy

Effective date: 11 September 2026

This Privacy Policy applies to mobile and desktop applications published by Ajwa (the "Apps", "we", "us"). It covers current Apps (including Flight Tracker Live Radar) and future Apps we release under the same developer account.

By downloading or using an App, you agree to this policy.

2. Information we collect

We collect only what is needed to run the App. Depending on the App and the features you use, this may include:

a) Information you provide

- Text you type (search queries, chat messages, notes, feedback, ratings)
- Content you create or upload (photos, videos, audio, files, captions) if the App offers that
- Optional details you save (flights, watch lists, preferences, units, map style)
- Support emails you send us

b) Information from your device

- Device type, OS version, language, time zone, app version
- Crash logs and basic diagnostics
- Anonymous or pseudonymous identifiers (including a Firebase anonymous ID used so our servers can rate-limit abuse)
- Purchase / subscription status from Apple (we do not receive your full Apple ID or card number)

c) Permissions (only if you grant them)

- Calendar — to add events you request (e.g. a flight)
- Location — only if an App offers maps, nearby search, or location features
- Camera / Photos / Microphone — only if an App lets you capture or attach media
- Notifications — only if you enable alerts
- Tracking — only if an App uses tracking; we will show Apple's App Tracking Transparency prompt first

We do not request a permission until the related feature is used.

d) Information we do not collect

We do not require a name, email, or password to use the Apps unless a specific App says otherwise. We do not sell your personal data. We do not use your data to train public AI models for our own advertising.

3. How we use information

- Provide and improve the App (search, maps, saved items, AI answers, subscriptions)
- Process in-app purchases and restore entitlements via Apple
- Prevent abuse, fraud, and excessive API use
- Respond to support requests
- Comply with law and App Store rules
- Send notifications you opted into

4. Third party services

4. Third-party services

Some processing happens on third-party infrastructure. They receive only what is needed for that feature:

Purpose

Typical providers

Auth, backend, usage limits

Google Firebase (Anonymous Auth, Cloud Functions, Firestore)

Flight schedules / airports

Aviation data APIs (e.g. AeroDataBox / RapidAPI)

Live aircraft positions

OpenSky Network

Weather

Open-Meteo

Maps

Apple MapKit

Photos / logos

Public image hosts (e.g. Planespotters, airline logo CDNs)

AI answers

AI providers routed through our backend (e.g. OpenRouter). Your prompt and relevant saved context may be sent after you consent.

Payments

Apple In-App Purchase / StoreKit

Hosting / email

Our site host and email provider

Those companies have their own privacy policies. We do not control Apple's payment data.

5. AI features

If an App includes AI (chat, generation, or similar):

- We ask for explicit consent before sending your prompts (and any related saved content) to an AI provider.
- Outputs can be wrong, incomplete, or outdated. Do not rely on them for safety-critical decisions (including whether to travel, board, or divert).
- Do not submit sensitive data (passports, payment cards, health data, other people's personal data) into AI chat.
- AI features may be limited for free users and included with a subscription.

6. Flight and map data (Flight Tracker)

Public flight, airport, weather, and map data come from third parties. It may be delayed, incomplete, or incorrect. The App is not an official airline, airport, or ATC source and is not for operational, dispatch, or emergency use.

7. Subscriptions and payments

Paid features are billed by Apple. We do not store your card details. Apple may share a purchase token or subscription status with us so we can unlock Pro. Refunds are handled by Apple under Apple's policies.

8. Data storage and retention

- On-device data (saved flights, notes, preferences, trial counters) stays on your device unless a feature syncs it.
- Server logs and anonymous usage counters are kept only as long as needed for security, abuse prevention, and operation, then deleted or aggregated.
- Deleting the App does not automatically cancel an Apple subscription.

9. Children

The Apps are not directed at children under 13 (or the minimum age in your country). We do not knowingly collect personal data from children. If you believe we have, contact us and we will delete it.

10. Legal bases (EEA / UK / similar)

Where GDPR or similar law applies, we process data to perform the service you requested, with your consent (AI, optional permissions), for legitimate interests (security, abuse prevention, improving the App), and to comply with law.

You may have rights to access, correct, delete, restrict, or export your data, and to withdraw consent. Email ajwairam00@gmail.com.

11. California / similar US laws

We do not sell or "share" personal information for cross-context behavioral advertising as those terms are commonly defined. You may request access or deletion at ajwairam00@gmail.com.

12. Security

We use HTTPS, sandboxing, and least-privilege backend access. No method of transmission is 100% secure.

13. International transfers

Your data may be processed in the United States or other countries where our providers operate.

14. Your choices

- Refuse optional permissions
- Decline AI consent (AI features will not run)

- Delete on-device data by deleting the App (and, on Mac, removing the app container if you wish)

- Delete on-device data by deleting the App (and, on Mac, removing the app container if you wish)
- Manage or cancel subscriptions in Apple ID settings
- Email us to request deletion of server-side identifiers we control

15. Changes

We may update this policy. The "Effective date" will change. Continued use after an update means you accept the revised policy.

16. Contact

ajwairam00@gmail.com

Original supplied complaint text

Source text supplied for investigation. Allegations and requested action are preserved as source material; no complaint was submitted and this is not an Apple decision.

Subject: Misleading app listing on the App Store: "Flightradar: Flight Tracker 24" (App ID 6811074477)

App details

- App name: Flightradar: Flight Tracker 24
- App ID: 6811074477
- Bundle ID: ajwa.live.flight.tracker
- Developer: Ajwa Iram (developer ID 6811074479)
- Seller: Ajwa Iram
- App Store link: <https://apps.apple.com/us/app/flightradar-flight-tracker-24/id6811074477?mt=12>
- Storefront examined: US

Summary

We believe this listing misleads App Store users. We examined it on 2026-10-27 05:05:34 UTC; the facts below were recorded automatically from the public App Store page. All times are in UTC.

Current indicators

- Brand terms mentioned in the description: google, apple, app store
- Weekly subscription "Weekly" at \$4.99, about \$259 a year
- Over a year the weekly plan costs 8.7 times the yearly plan (\$259 against \$29.99)
- The privacy policy is on a free site builder (Google Sites): <https://sites.google.com/view/ajwaprivacypolicy>
- The developer account published its first app 33 days ago (2026-09-24)

App Review Guidelines that appear relevant

- 2.3 Accurate Metadata - the listing must accurately reflect the app (see also 2.3.1 on misleading marketing)

Evidence

- Attached analysis: [flightradar-flight-tracker-24_6811074477_2026-10-27_070534_analysis.pdf](#) (SHA-256 02d8d9e624efa27aa9dae3406a3690716c4cd12059e820282eb984ca20285c5a)
- Web archive copy of the store page: <https://web.archive.org/web/20261027050549/https://apps.apple.com/us/app/flightradar-flight-tracker-24/id6811074477?mt=12>,
<https://web.archive.org/web/20261027050618/https://sites.google.com/view/ajwaprivacypolicy>

Requested action

Please review this app and its developer account for compliance with the guidelines listed above.
