BRANDING AND PUBLISHER IDENTITY WARNING · CALENDAR UTILITIES

GCal and Sideryn: familiar brands, different sellers.

GCal's linked legal pages lead to Thomas Leyne's second Apple account. Its Meet+ app reuses the recognizable older Google Meet camera mark, while PhotosApp combines an Apple Photos-style flower with Google Photos branding in its promotions. Historical Meet+ buyers report paid downloads that would not open. GCal's Apple seller remains Chandalis Meas; shared legal declarations and analytics connect the sites. These findings support a branding and seller-transparency warning, with each app's evidence assessed separately.

WHAT YOU NEED TO KNOW

A real cross-account link, with an ownership question still open.

01

A documented bridge to a second Apple account

GCal is sold under Chandalis Meas, but its linked Soriian terms, policy and footer name Thomas Leyne. A different Apple account under Thomas Leyne publishes Meet+ and PhotosApp. Both app families point to legal pages naming the same operator.

Apple publisher IDs plus app-linked operator declarations.

E2 E7 E8 E10 E13 E14

02

The linked account warrants its own branding warning

Meet+ reproduces Google Meet's older multicolor camera inside a new blue tile. PhotosApp uses an Apple Photos-like eight-part flower while its four promotions repeat Google Photos branding. Historical Meet+ reviews also report paid-app failures and ask for refunds. Both current listings are Free with no visible IAP list; no current paid fraud or PhotosApp loss was independently established.

Original app icons, official brand references, six Apple promotions and attributed reviews.

E29 E30 E34 E31 E33 E32 E35

03

The websites share a technical identifier

Soriian and Sideryn public scripts send website analytics to the same Matomo destination using site ID 3. Soriian's code even refers to Sideryn by name. This strengthens the website connection beyond a matching personal name, without proving who owns either Apple account.

Public JavaScript files; exact destination and parameter compared.

E15 E16

04

A new domain serves a long-established app

Apple dates GCal's first release to May 2016. A recovered 2019 Apple page already has the same app name, numeric ID and publisher. The Soriian domain was registered in July 2026; it is a newer web identity for an older product, not evidence of a newly created app.

Current Apple record, 2019 replay and registrar RDAP.

E5 E18 E17

05

Ownership transparency and optional AI sharing need clarity

The linked legal pages do not explain the relationship between the seller and named operator. Separately, the general policy's broad no-third-party-sharing wording needs to be read beside the help page explaining that an explicitly connected AI assistant can receive event/task details for its own processing.

Publisher declarations and documentation, not observed network traffic.

The account connection, step by step

This investigation finds a verifiable public connection between two Apple seller identities. GCal's listing directly links to soriian.com. That site names Thomas Leyne as its developer/operator. Thomas Leyne is also the exact seller name on Apple account 6790026406, whose two apps link to Sideryn legal pages naming him.

A second, independent identifier strengthens the link: both sites use the same website-analytics destination and site number. This documents shared declared operation and analytics configuration. It does not establish that Chandalis Meas and Thomas Leyne are the same person, which person controls the Apple credentials, or whether a legitimate licensing, development or ownership arrangement explains the names.

The second live Apple account, with both products. E10.

Same operator name on the separate Sideryn legal hub. E13.

Primary-source relationship map

Observed item	Identifier / declaration	What it establishes
GCal Apple account	Chandalis Meas · 1070043725	Current recorded seller
GCal legal/support site	soriian.com · Thomas Leyne	App-linked operator declaration
Second Apple account	Thomas Leyne · 6790026406	Different numeric publisher identity
Meet+ / PhotosApp legal pages	sideryn.com · Thomas Leyne	Same declared operator across both app families
Both public analytics scripts	www.sgappanalytics.com/matomo.php · idsite=3	Shared analytics configuration
Ultimate ownership / transfer terms	No independent transaction or company record established	Not established by these pages

Meet+: Google’s older camera mark inside a new tile

Meet+ uses the recognizable red/yellow/blue/green camera associated with Google Meet’s earlier visual identity, placed inside a bright blue rounded tile. The camera proportions, diagonal colored segments and right-facing green lens closely reproduce that historical mark. The added tile changes the treatment, but keeps the brand-recognition cue.

The comparison deliberately includes both the historical multicolor Google reference and the current official yellow camera. Using only today’s icon would miss the resemblance to the older brand asset. Meet+ remains an independently published Mac product from Thomas Leyne, not Google’s own application.

Meet+ · Thomas Leyne · app 1111405920. Current original Apple artwork. E29.

Google-hosted original mark; corroborated by Google’s dated 10 August 2022 announcement. E34. Native source is 96×96; no invented similarity score.

Current Google Meet · Google · app 1096918571. E31.

E29; E34; E31; E25. Google brand guidance is relevant; no permission or enforcement decision was obtained.

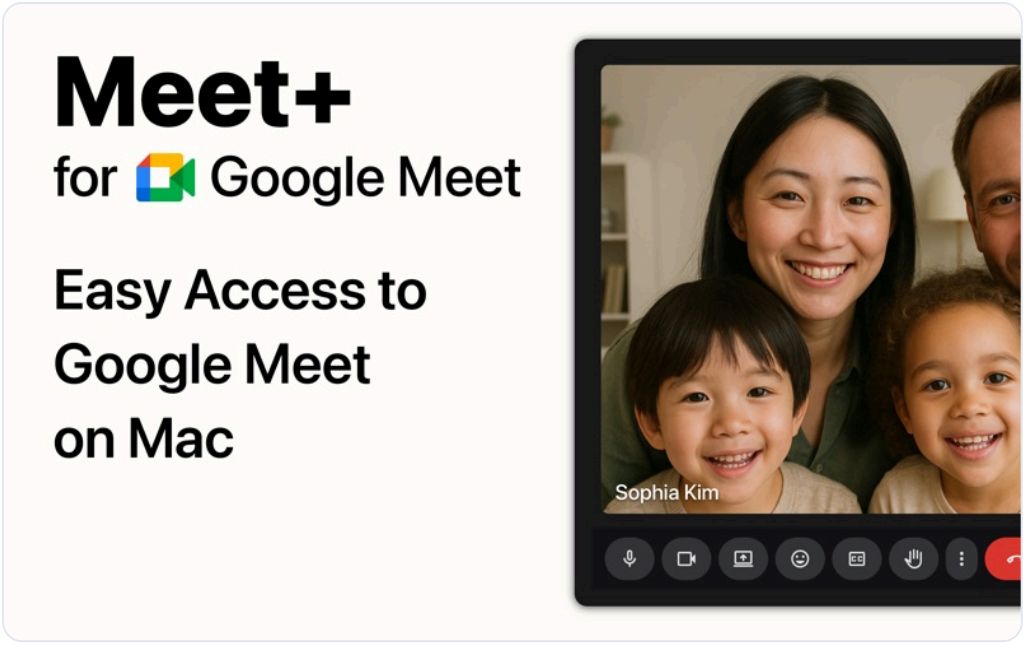

Meet+ promotions repeat Google’s name and mark

The first original promotion combines Meet+, the old Google camera logo and the words for Google Meet. The next line advertises easy access to Google Meet on Mac. The second shows a video-call window and a meeting-calendar panel with Google service icons. This repeated Google identity can make the independent wrapper feel like a Google-published desktop product.

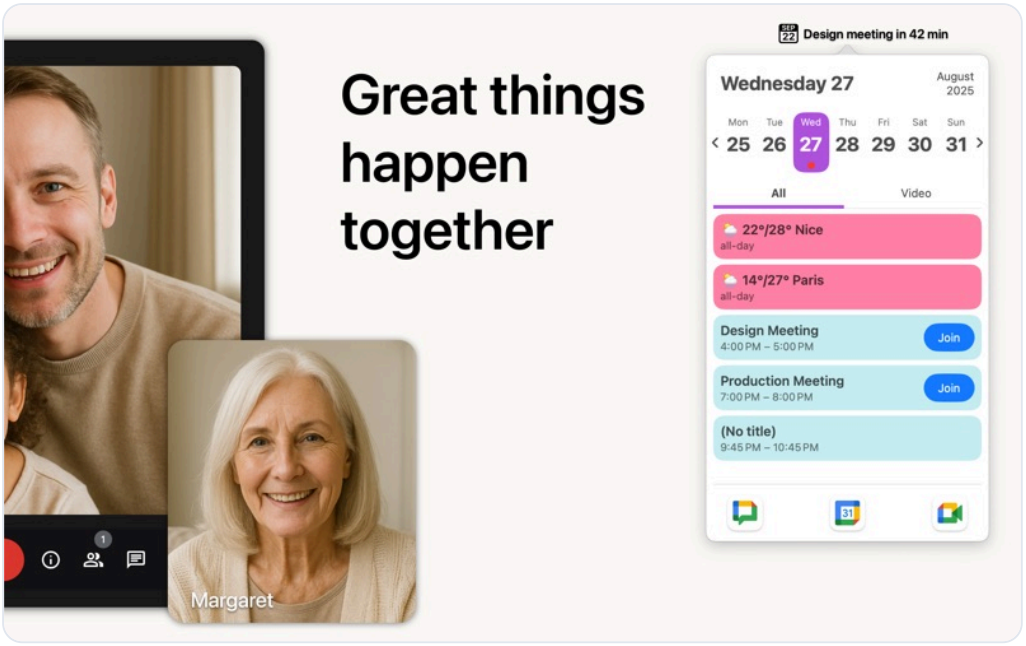

These images are promotional illustrations, not proof of a tested call or an independently copied codebase. The description includes a Google-independence disclaimer. Its position in the longer text does not make the visible icon/name combination disappear, and it does not itself establish branding permission.

There is also specific customer-complaint evidence: three visible reviews from 2019 and 2020 report that a paid download would not open or showed a blank screen, with refund requests. Native examples are reproduced below. They are historical allegations attached to this app ID, not new purchase tests and not proof that the current Thomas Leyne operation caused those older failures. A favorable review says calling, messaging and the calendar work; it is retained alongside the complaints.

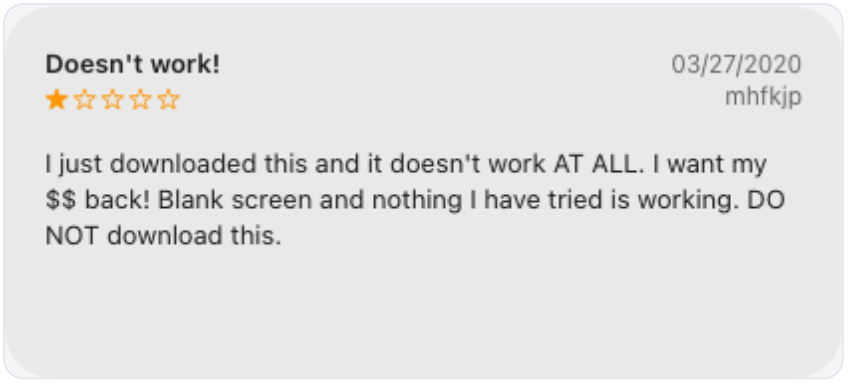

The currently checked US listing is Free and displays no IAP list. The old money-back comments cannot be presented as evidence of a current subscription scam. Together, the brand imitation and historical delivery complaints justify a consumer warning; they do not establish intentional fraud.

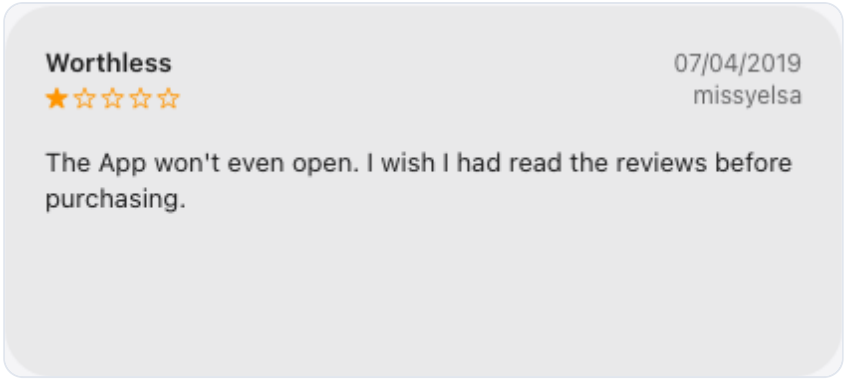

Original Apple promotion 1, app 1111405920. E29.

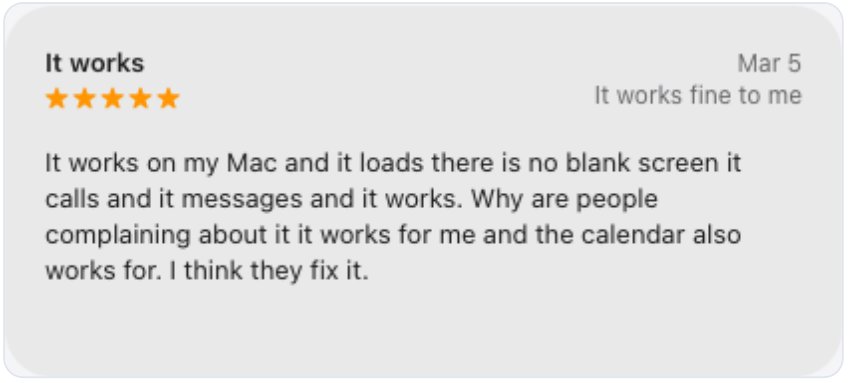

Original Apple promotion 2, app 1111405920. E29.

E29; E35; E11. Exact dates are preserved; publication history does not establish who operated the app when older complaints were posted.

PhotosApp: an Apple-style flower sold under a Google Photos name

PhotosApp's app icon is an eight-part rainbow flower on a white rounded square. Its central arrangement, ring of colored petals and overall visual vocabulary resemble Apple Photos more closely than Google Photos' four-part pinwheel. The shapes are stylized and not pixel-identical. The originals below make that distinction visible.

The branding problem is therefore a combination of familiar signals: an Apple Photos-style flower icon, the PhotosApp name and Google Photos prominently in the listing and advertisements. This can blur whether the publisher is Apple, Google or an independent developer. Apple records Thomas Leyne as the seller; the description states that the app is independent of Google.

PhotosApp · Thomas Leyne · app 6790026404. E30.

Official Apple Photos · Apple · app 1584215428. E33.

Official Google Photos · Google · app 962194608. E32.

E30; E33; E32. These are branding comparisons, not a rights-holder ruling.

Four PhotosApp promotions surround the product with Google Photos branding

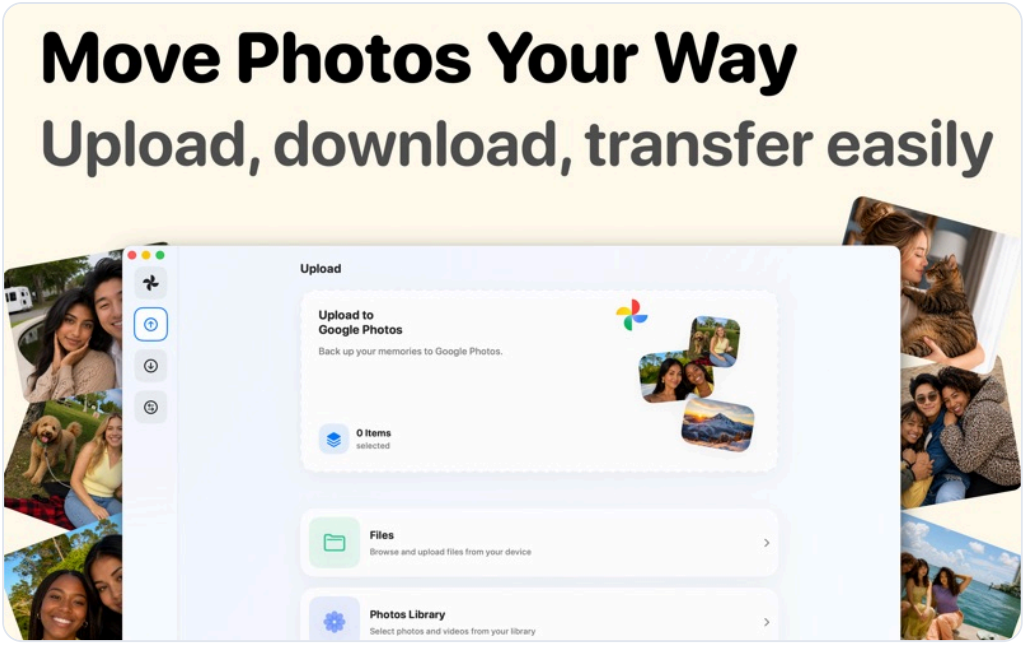

The first promotion places Google Photos immediately after PhotosApp and repeats Google's pinwheel around the illustrated library and file folders. The other three advertise uploads/downloads/transfers, format conversion and control over what moves between accounts. Google branding remains visible inside the depicted app interfaces.

The repetition supports a brand-confusion warning: a service name and familiar icon can dominate the buying/download impression even though the seller is independent. It does not prove the advertised transfers are fake. The listing describes use of Google Photos APIs, selected media and review steps; no installation, Google sign-in or transfer was performed.

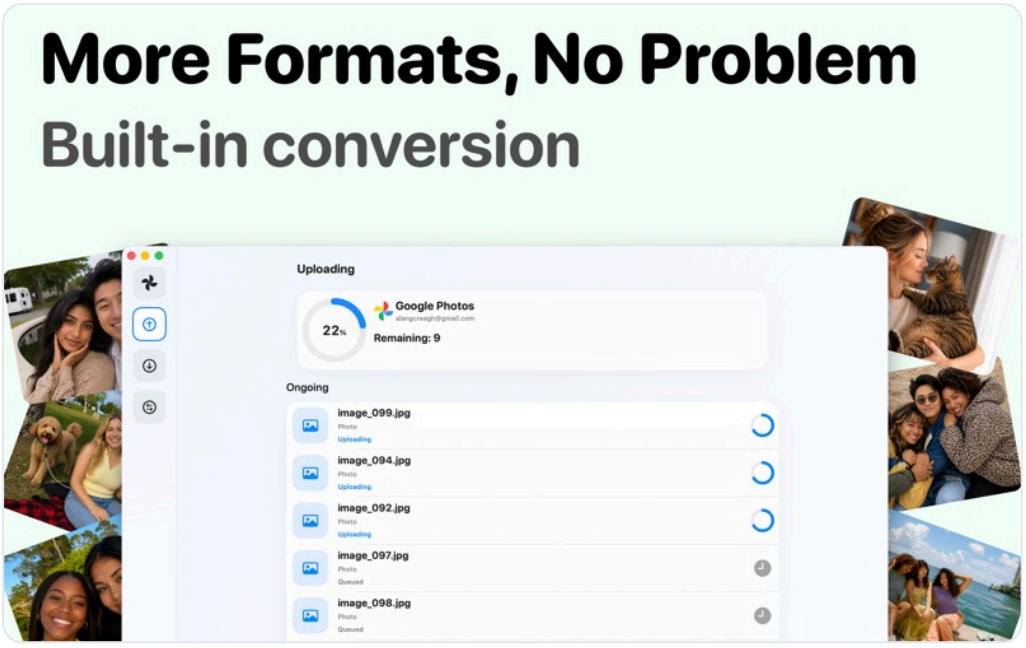

PhotosApp is currently listed as Free with no visible IAP list. No customer-review text or independently documented paid-loss case was found in the checked US pages. The evidence supports the visual-branding allegation, not a claim that this app has demonstrably charged or defrauded customers.

Before and after: the name stayed, the business presentation changed

The archived records establish continuity of a Google Calendar utility. They do not show a harmless unrelated app later turning into a Google-branded product. In October 2019, GCal already used its Google Calendar name, linked to Yellow Monkey Studio and explicitly denied Google affiliation.

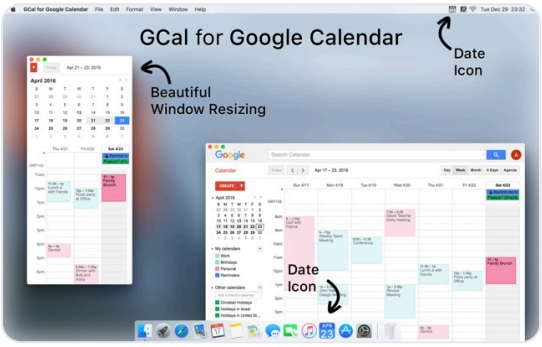

By 10 July 2026 the paid download was $4.99 and still linked to Yellow Monkey Studio. By the 26 October capture it was a free download with purchase options and Soriian links, while the Apple seller and numeric IDs remained unchanged. Apple dates version 4.0.0 to 15 October 2026. The website/legal change is documented, but no acquisition or account-transfer agreement was recovered.

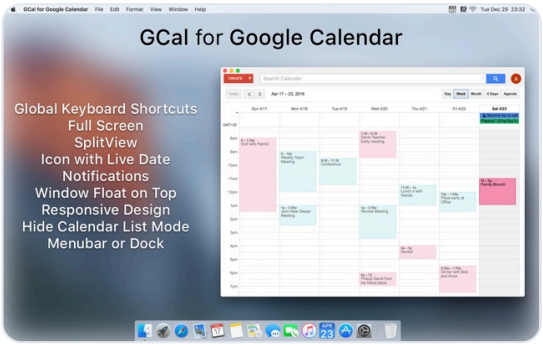

Earlier GCal artwork URL preserved by the 15 October 2019 Apple replay; original image fetched successfully. E18.

Three earlier WrApp associations

Secondary catalogs and an older technology article associate three additional app IDs with Chandalis Meas. Those records are preserved as historical leads. They are not as strong as a recovered Apple account record, and dates such as a catalog's relative last-update label were not adopted.

All three exact-ID Apple lookups returned no software result and all three product pages returned 404 in each of US, DE and IE on 5 November. That supports checked-store unavailability. It does not establish a developer ban, who withdrew them, or why. GCal's developer account remains live.

Secondary historical associations; availability freshly checked

Historical app	Exact app ID	Association source	Current checked-store outcome
WrApp for Google Docs	1077187401	softwar.io names Chandalis Meas and publisher 1070043725	Unavailable · US/DE/IE
WrApp Tube - Desktop App for Youtube	1070046155	Apfelpage app card names Chandalis Meas	Unavailable · US/DE/IE
WrApp for Netflix	1073617739	Apfelpage app card names Chandalis Meas	Unavailable · US/DE/IE

E26.

Google Calendar references: resemblance is not the whole finding

The current original icons above share the calendar number 31 and a blue/white palette. GCal adds a pale date tile, rounded blue frame, colored marks and a different calendar shape. They are not identical images, and a calendar date is also a functional convention. The more relevant branding question is the combined icon and prominent Google Calendar name.

The listing explicitly says the app is independent and is not affiliated with, sponsored by or endorsed by Google. This statement also existed in the recovered 2019 text. It does not by itself establish brand permission, but it materially distinguishes the presentation from an unqualified claim to be Google's own app. No rights-holder decision or proven impersonation complaint was found in the checked material.

Official Google Calendar listing ↗ Google brand guidance ↗

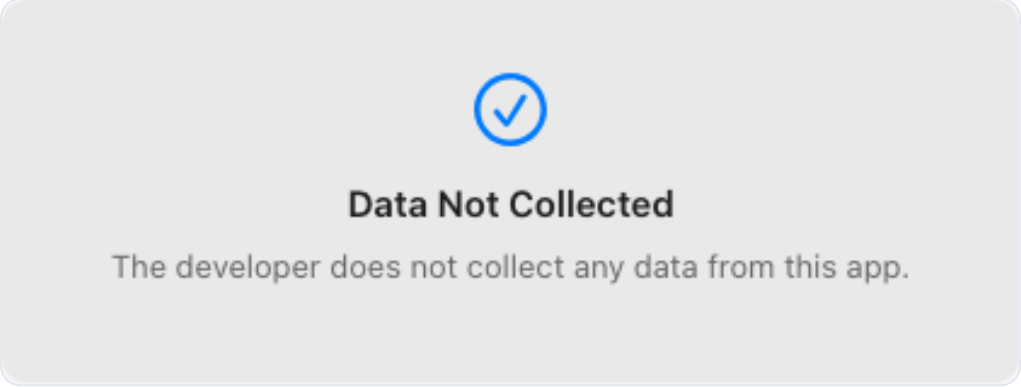

E2; E18; E25. Current official icon: app 909319292, publisher Google.

Local calendar processing, website analytics and optional AI access

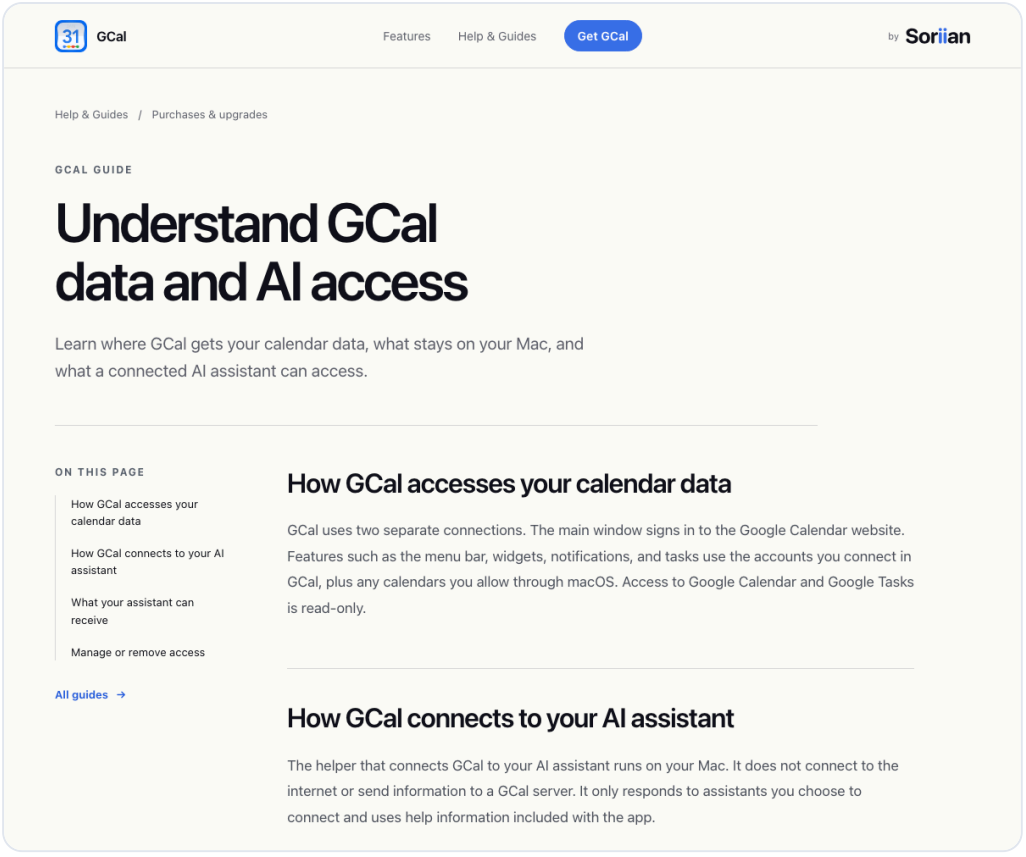

GCal's privacy policy says that calendar and task information is processed locally, credentials are stored in macOS Keychain, and Soriian servers do not collect the calendar/task data. It separately discloses website analytics. The Apple listing says Data Not Collected. Neither Google synchronization nor a website tracking script alone disproves the Mac app's label.

The optional MCP feature is described more fully in the help guides: an assistant selected by the user can request event/task details through a local connector, and that assistant's provider may process what it receives. Credentials are per connection, access can be revoked, and an event draft must be reviewed before saving. This is an explicit user-enabled feature, not evidence of hidden exfiltration.

The general policy nevertheless says Google-derived data is not shared with third parties or transferred off the device. Read beside the assistant documentation, that broad wording leaves the optional sharing boundary insufficiently explained in the main policy. The mismatch concerns documentation scope; the app, login flow and actual network behavior were not tested.

Original Apple privacy card. E2.

The linked guide describes user-authorized processing by the chosen assistant's provider. E22.

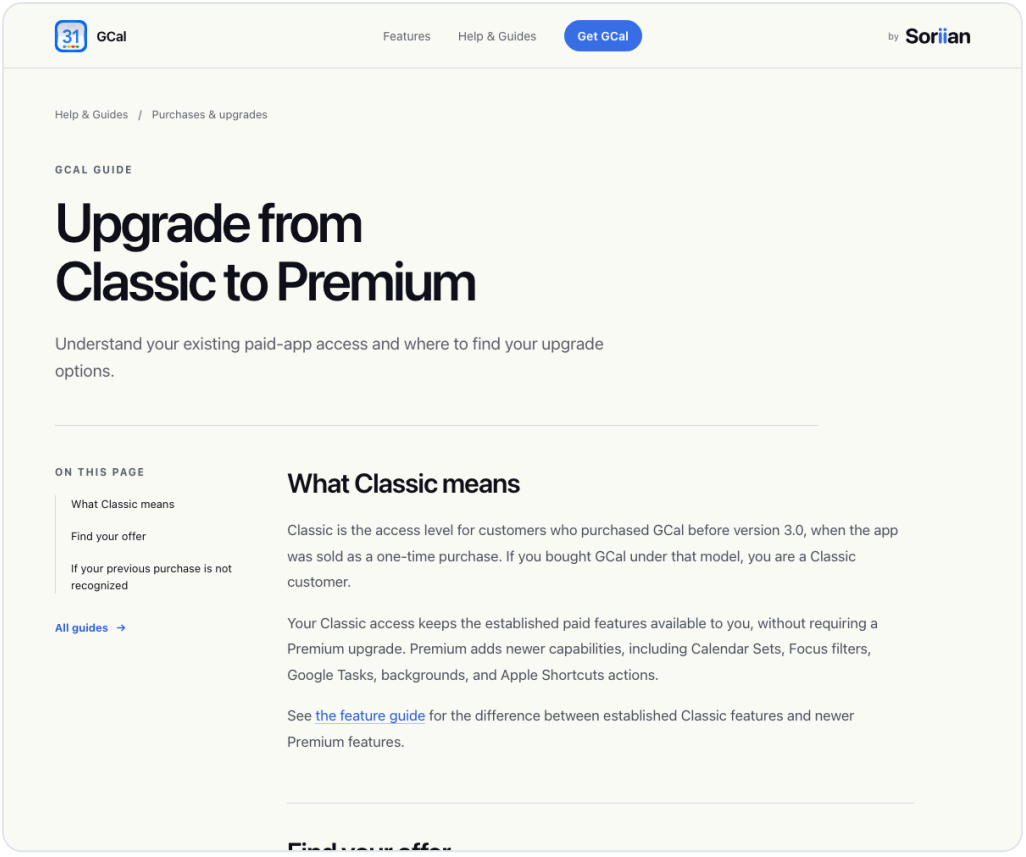

Privacy policy ↗ Data and AI-access guide ↗ Detailed assistant connection guide ↗

E7; E22; E23; E24.

Paid once before; yearly or lifetime now

GCal's current US offers are a $9.99 yearly subscription after a stated three-day trial, a $19.99 lifetime license, and a $14.99 loyalty lifetime upgrade. No weekly subscription is listed. Germany and Ireland display €9.99, €22.99 and €17.99 respectively. These are listing prices, not a tested charge.

The publisher expressly says that existing paid customers keep established Classic features without upgrading, and that Premium adds newer capabilities. Its help guide says a Classic user can close the offer, keep Classic access, and return to Classic after a Premium subscription ends. This materially counters a blanket claim that all earlier purchasers were forced to buy the same app again. Actual receipt restoration and feature entitlements were not purchase-tested.

Publisher's Classic-to-Premium explanation. E21.

E2; E4; E21.

What the evidence establishes

The clearest finding is account transparency: the Apple seller differs from the operator named in the app's own legal pages, and that named operator has a second, independently identifiable Apple account. Shared analytics configuration corroborates the web connection. The commercial relationship between the two seller names remains unexplained.

GCal and both Thomas Leyne apps display non-trader statements in Germany and Ireland. No business country was established from those records or an independently matched company registration. Names, French-language pages, domain registrars and hosting locations do not establish nationality or operating country.

The research establishes a two-account legal/analytics connection and app-specific branding concerns. Meet+ uses Google's historical mark and has older refund/non-function complaints; PhotosApp mixes Apple-like iconography with Google Photos marketing. The material does not establish a developer ban or deliberate fraud. Current free pricing, independence disclaimers, older-complaint dates and the positive Meet+ review remain material to that assessment.

E22 / Soriian data and AI-access guide

Retrieved 2026-11-05T12:06:29.391472+00:00; HTTP 200. The local connector exposes relevant event/task details only to an assistant chosen by the user; those details may be processed by that assistant's provider. The guide describes revocation and review before saving event drafts.
Open source ↗

E23 / Soriian detailed MCP guide

Retrieved 2026-11-05T12:06:29.257819+00:00; HTTP 200. Optional local connection, per-assistant credentials and revocation documented. It warns that revoking access does not remove information already shared with the assistant. No connection was configured in this investigation.
Open source ↗

E24 / Apple's app-privacy definitions

Retrieved 2026-11-05T12:05:16.562187+00:00; HTTP 200. Local processing and transient off-device processing are not automatically reportable collection. A website analytics script does not prove retained collection by the Mac app.
Open source ↗

E25 / Google brand guidance

Retrieved 2026-11-05T12:05:16.386761+00:00; HTTP 200. Rules distinguish informational references from imitation or an implication of affiliation. Permission to use Google's brand was not independently established; no infringement ruling inferred from a calendar icon.
Open source ↗

E26 / Historical WrApp catalog associations and fresh availability checks

WrApp for Google Docs (1077187401) is indexed by softwar.io under Chandalis Meas / publisher 1070043725. An older Apfelpage article links WrApp Tube (1070046155) and WrApp for Netflix (1073617739) to the same displayed seller. These are secondary historical associations, not recovered Apple account records. Fresh exact-ID lookups returned zero software results and product URLs HTTP 404 in US, DE and IE for all three. Removal reason, operator at removal and Apple enforcement were not established.
Open source ↗

E27 / Related apps · Germany and Ireland provider checks

Meet+ and PhotosApp show Thomas Leyne as a non-trader in DE/IE; GCal shows Chandalis Meas as a non-trader. None of these checked disclosures establishes a business country. The country remains Unknown.
Open source ↗

E28 / Identifier-based account and ownership investigation

Exact Apple publisher/app IDs, domains, support identifiers, operator names and analytics configuration were compared with existing investigations and searched publicly. The explicit two-account legal-name and analytics bridge is documented. No identity fraud, developer ban, shell-company registration or additional account was established. Same-name professional profiles and unrelated companies were excluded.
Open source ↗

E29 / Meet+ · deeper listing, artwork and reviews check

Retrieved 2026-11-05T12:24:28.292257+00:00; HTTP 200. Current listing is Free, with no in-app purchase list visible. Two original Mac promotions retrieved. Historical 2019/2020 reviews allege paid-download failures and seek refunds; another visible review says it works. Older complaints do not prove failure of the current binary or the current seller’s conduct.
Open source ↗

E30 / PhotosApp · deeper listing and four promotions

Retrieved 2026-11-05T12:24:28.305865+00:00; HTTP 200. Current listing is Free with no IAP list visible; four original Mac promotions use the Google Photos name and pinwheel. No customer-review text was present in the checked US listing or review page.
Open source ↗

E31 / Current official Google Meet · correct software ID

Google / Google LLC, app 1096918571, independently checked via Apple exact-ID response and official listing. Current original icon retrieved on 2026-11-05T12:30:22.302593+00:00.
Open source ↗

E32 / Current official Google Photos · Apple software record

Retrieved 2026-11-05T12:24:28.207674+00:00; HTTP 200. Google / Google LLC, app 962194608. Original four-part colored pinwheel icon retrieved; it is not the eight-part flower used by PhotosApp.
Open source ↗

E33 / Official Apple Photos · exact software record

Apple, app 1584215428. Original eight-petal flower icon retrieved on 2026-11-05T12:30:22.302593+00:00. Used as the relevant additional comparison for PhotosApp, alongside Google Photos.
Open source ↗

E34 / Historical Google Meet mark · official Google asset and dated announcement

Original Google-hosted 96×96 mark: https://www.gstatic.com/images/branding/product/2x/meet_2020q4_48dp.png . The same multicolor camera is visible in the icon-transition animation in Google’s announcement dated 10 August 2022. It is a dated historical brand reference, not today’s Google icon.
Open source ↗

E35 / Meet+ · expanded Apple review page

Retrieved 2026-11-05T12:24:28.124439+00:00; HTTP 200. Historical review titles and dates corroborated against the main listing and captured natively: Disappointed (3 August 2019), Worthless (4 July 2019), Doesn't work! (27 March 2020). A favorable It works card shows Mar 5 without a year in the native browser capture. Responsive duplicate copies count as one review each.
Open source ↗

E36 / PhotosApp · review page check

Retrieved 2026-11-05T12:24:28.159063+00:00; HTTP 200. No customer-review text was found in this checked response. Apple’s low-rating-count notice is not itself a fraud indicator. The customer-review feed also returned no entries; no paid-loss story is invented.

Description

GCal for Google Calendar is the best Google Calendar™ app for Mac.
Keep track of life’s important events in one place, with fast access to Google Calendar whenever you need it, without opening your web browser.
Celebrating 10 years on Mac, GCal delivers its most comprehensive and powerful Google Calendar experience yet.

KEY FEATURES:
• Instant Access: Open GCal from the menu bar, Dock, or a global hotkey.
• Fast and Responsive: Move smoothly between dates, views, and events.
• Easy Event Management: Create, edit, duplicate, and share events quickly.
• Multiple Account Support: Bring multiple Google accounts and macOS calendars together.
• Calendar Sets: Switch custom calendar groups in one click.
• Smart Notifications: Stay on top of your schedule with reminders you can act on instantly.
• Focus Filters: Automatically tailor menu bar events and notifications to each Focus.
• One-Click Meetings: Join Meet, Zoom, Teams, Webex, and more.
• Widgets and Shortcuts: View your schedule, create events, and automate daily actions.
• Trackpad Gestures: Swipe naturally between calendar periods.

JOIN MEETINGS FASTER
• Never Hunt for a Link: GCal finds upcoming meeting links automatically.
• Join From Anywhere in GCal: Use the menu bar, Dock, widgets, notifications, or macOS Shortcuts.
• Your Meeting, Your Way: Choose your browser or native Zoom or Teams app.
• Use macOS Shortcuts to find and join your next meeting.

FOCUS ON WHAT MATTERS
• Switch between work, family, and other calendar groups with Calendar Sets.
• Configure macOS Focus Filters to tailor menu bar events and notifications when a Focus is active.
• Filter by selected calendars, video meetings, or organizer emails and domains.
• Check busy times from your other Google accounts in day and week views.

REMINDERS THAT WORK FOR YOU
• Open events, join meetings, email organizers, or snooze from supported notifications.
• Set reminders for scheduled tasks and all-day tasks, plus all-day events without an existing reminder.
• Group all-day reminders scheduled for the same time into one notification.

WIDGETS AND SHORTCUTS
• 35 Widgets at a Glance: See upcoming events, calendars, dates, clocks, and more.
• Take Action Instantly: Open events, join meetings, or create events from widgets.
• 13 Powerful Shortcut Actions: Create events and tasks, retrieve your schedule, join meetings, and more.

MAKE IT YOURS
• Personalize Google Calendar with accent colors, Dark Mode, and 31 built-in backgrounds.
• Import your own backgrounds, with separate images for light and dark appearances.
• Clearer Calendar, Less Clutter: Highlight today and weekends, hide past events, or merge identical events.
• Small Touches, Big Difference: Hide morning hours, use compact layouts, and duplicate events faster.
• Icons That Stay Current: Choose 45 live Dock icons and 40 menu bar styles.

EVEN MORE TO LOVE
• Connect a compatible AI assistant through MCP to check your schedule, find free time, and prepare event drafts for you to review and save.
• ICS Without the Fuss: Open ICS files or drag them onto the Dock icon.
• Weather on Your Calendar: Create forecasts for cities worldwide.
• Bring selected calendar enhancements to Safari and supported Chromium browsers.

PREMIUM AND PURCHASE OPTIONS
Unlock Premium your way:
• Yearly Premium Subscription: $9.99/year after the 3-day trial ends.

• Lifetime License: one-time purchase of $19.99.

Prices vary by region and appear before purchase. Payment is charged to your Apple Account at confirmation. The yearly plan auto-renews unless canceled at least 24 hours before the period ends. Manage or cancel it in Apple Account settings.

Privacy Policy: https://soriian.com/privacy/
Terms of Service: https://soriian.com/terms/

An internet connection is required. Offline mode is not supported. Some features require Premium.

[New Extra] Advanced Trackpad Swipe feature. [Thanks Unhae K]

[New] Import ICS from menu application or Drag and Drop on Dock icon.
[New] From macOS Ventura, you can now create Weather Forecast Calendars from the application menu.

[Improvement] The GCal Help Menu send now to the new FAQ page with answered questions such as how to merge my other accounts into 1, how to link with other services and more...
[Improvement] Better management for Add-ons.
[Improvement] Calendar colors now displayed in the menubar window.
[Improvement] Clicking in the menubar events (which are not video meetings) will now open the Calendar to the event.
[Improvement] New application menu item to easily import/export ics.

[...

2.6 · 2022-09-20

[New] "Open with GCal" from the Services menu and from "Open With..." menu to open Google Calendar links from invitation for example (Thanks Irene).
[New] Dock Beige 2 theme with black text. (Thanks A-A-)
[Bug Fixed] Some keys were making noise when pressed. (Thanks Adrien)
[Bug Fixed] In rare cases, when typing key shortcut it was not recognized. (Thanks Nils)
[Bug Fixed] In some cases a menubar gap was visible when using Dock only mode (Thanks Francesco)
[Bug Fixed] In some rare cases Zoom events were not opening.
[Bug Fixed] Properly restore the window position in multi display configuration. (Thanks Joe)
[Improvement] New option to show all events in the menu bar. Not only video call ones as previously.
[Improvement] Disable Scroll Month feature now works with Custom Weeks too. (Thanks Midwestbasil)
[Other] Other improvements and small bugs fixed.

Evidence and integrity

Appendix — the developer website linked from the listing as displayed

Full-page browser capture of https://soriian.com, taken 2026-11-05 11:57:20 UTC. Cookie-consent overlays (the host's, not the page's content) were hidden before the capture, and Google pages were opened in English. Only the first 3 pages are shown; the whole capture is in the evidence archive.

★★★★★

Really good

It's really good and useful - what more can you say?

G **GuitarGaz**
United Kingdom

★★★★★

Excellent

If you want Google Calendar as an app instead of using it in a web browser, this is perfect.

K **Kevin Mahaffey**
United States

★★★★★

My Go To

Love Google Calendar. I've tried many others but GCal is the BEST!! Love how I can add tasks into it and it shows on my calendar!

C **Coley_Armstrong**
United States

CLOSE AT HAND

Your next move. One click away.

Check what's next, see your tasks, and join your next meeting from the menu bar. Open your calendar when you need the bigger picture, with today's date always in sight in the Dock.

Explore menu-bar access →

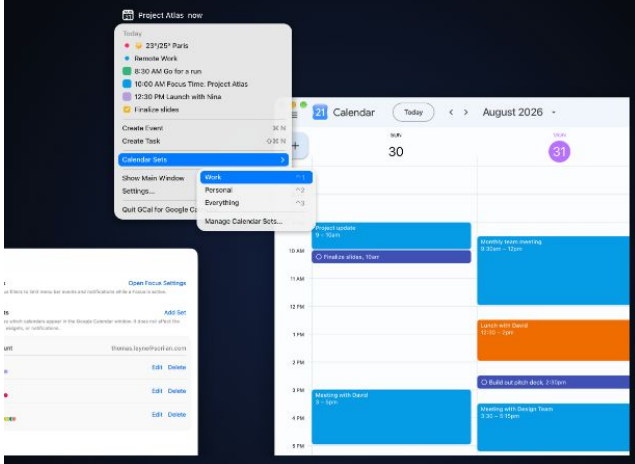

CALENDAR SETS

Your calendars. The right combination.

Work, personal, or everything together. Save your favorite combinations as Calendar Sets and switch between them with a click, right inside the Google Calendar you know.

For quieter work time, use macOS Focus filters to choose which events appear in your menu bar and notifications.

Discover Calendar Sets →

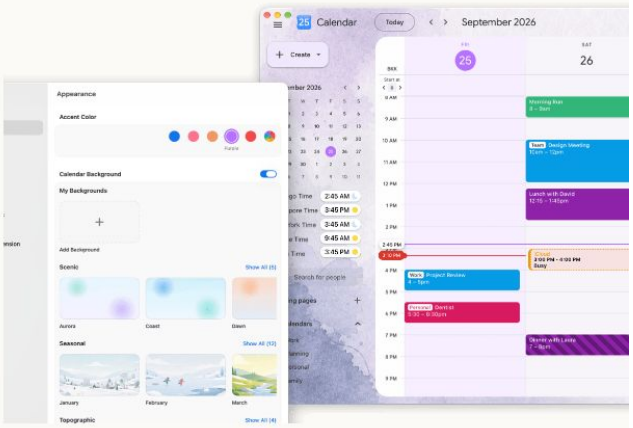

USEFUL DETAILS. PERSONAL TOUCHES.

Make Google Calendar feel like yours.

Check availability from other accounts while planning your day. Make event titles easier to scan with tags, hide hours you don't use, and duplicate events quickly. Bring it all together with your choice of colors and backgrounds.

Explore calendar enhancements →

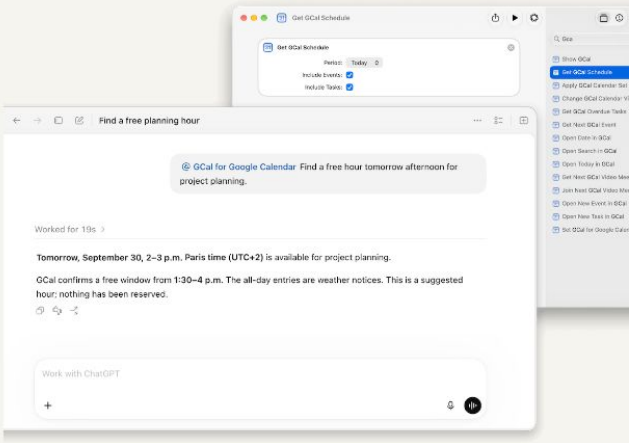

APPLE SHORTCUTS · AI ASSISTANTS

A little less calendar work.

Build a daily briefing with Apple Shortcuts. Ask your connected AI assistant to find a free hour or prepare an event for you to review. Make your schedule part of the tools and routines you already use.

Explore Apple Shortcuts →

Connect your AI assistant →

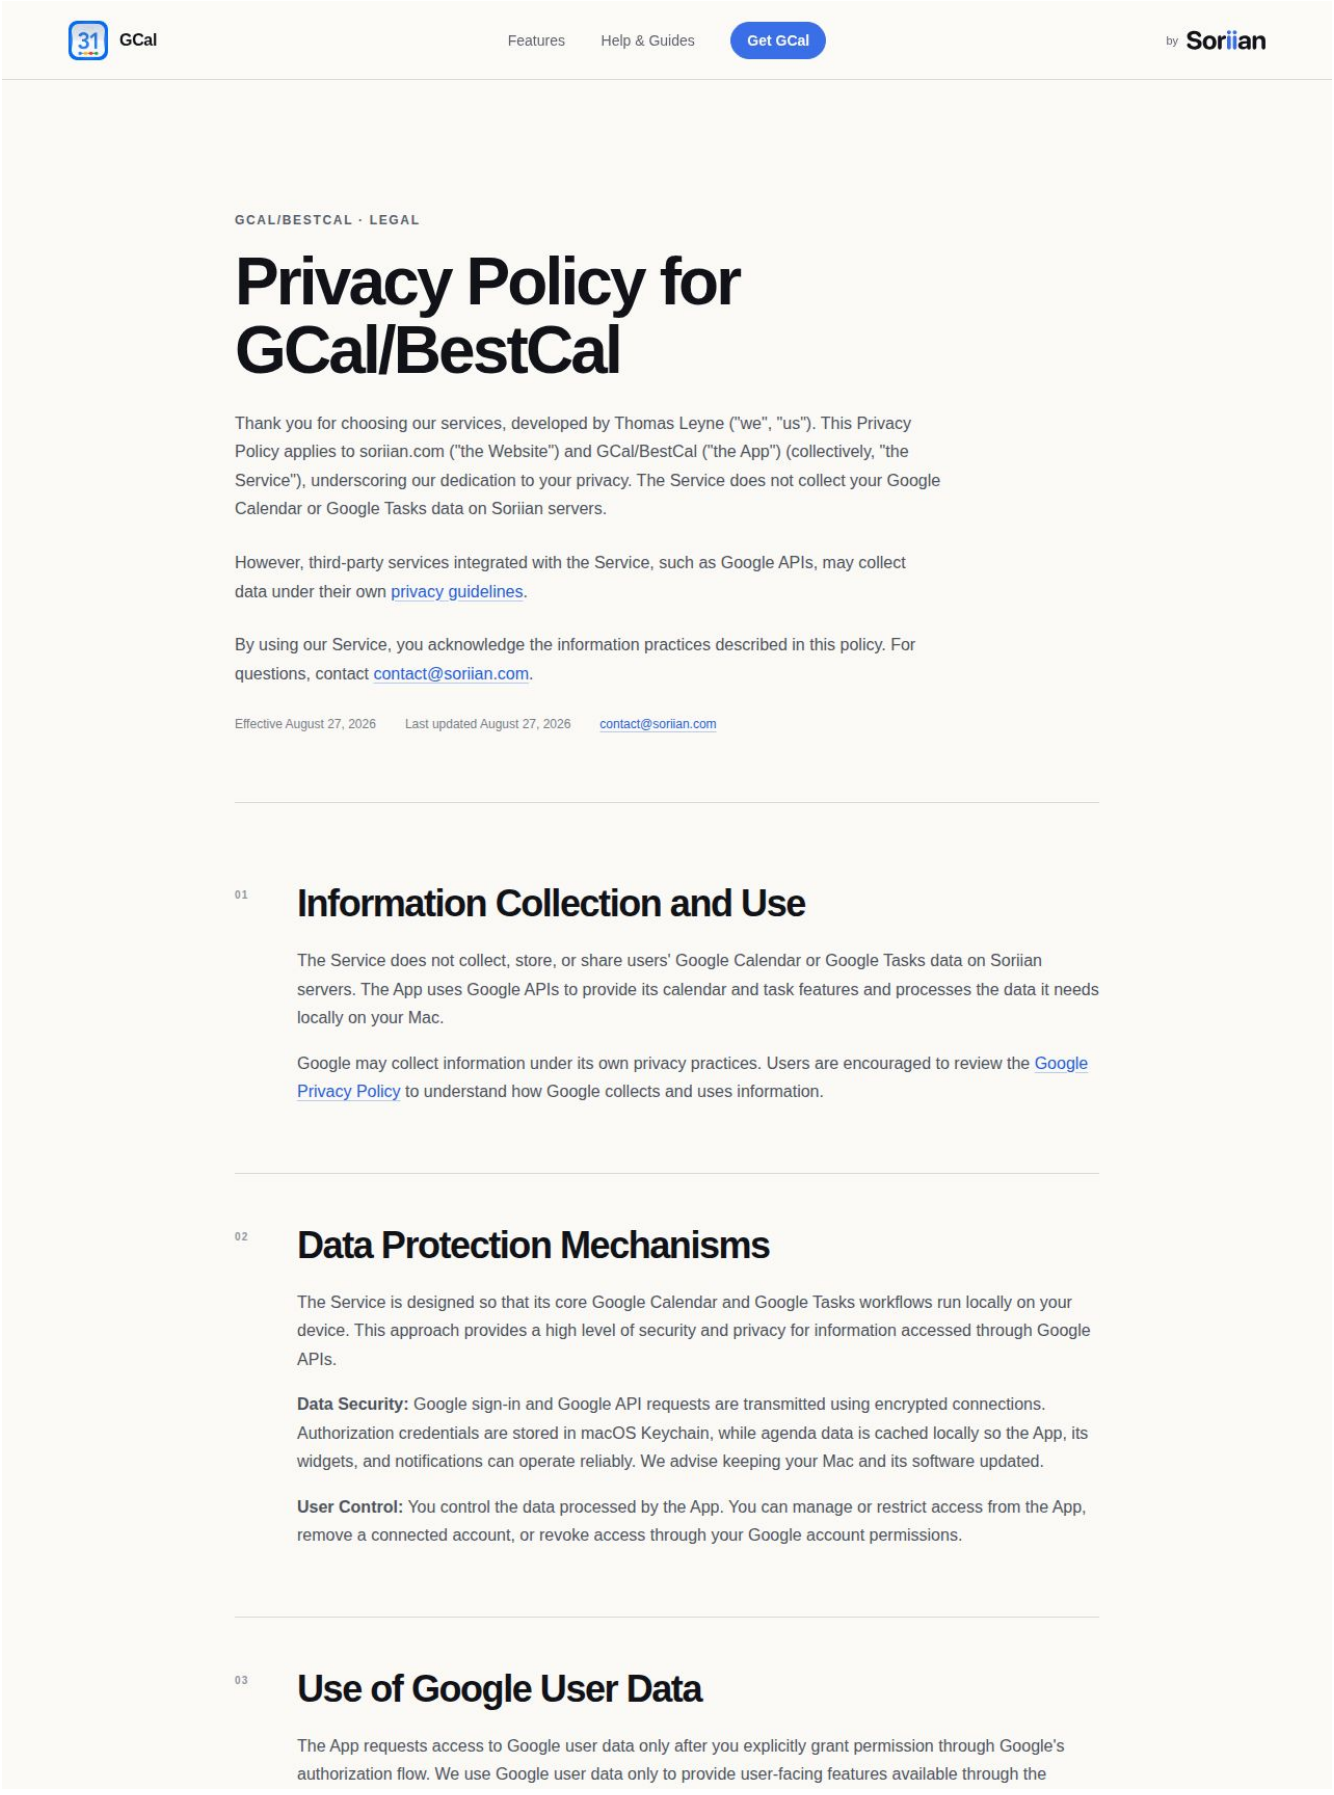

WIDGETS FOR YOUR MAC

Keep your day in view.

A quick glance or a fuller picture. Choose the widgets that fit your day, and make them your own.

Appendix — the privacy policy linked from the listing as displayed

Full-page browser capture of https://soriian.com/privacy/, taken 2026-11-05 11:57:20 UTC. Cookie-consent overlays (the host's, not the page's content) were hidden before the capture, and Google pages were opened in English.

Service.

Google user data received by the Service is used only to:

- identify and manage the Google account you connected;
- load calendar lists and calendar events you authorized;
- load Google Tasks lists and tasks you authorized;
- display agenda, task, and meeting details in the menu bar and App views;
- show agenda information in widgets;
- generate optional reminders for upcoming events;
- apply the calendar visibility you choose through macOS Focus filters; and
- open the conference or related meeting link you choose.

Native Google connection: The App requests read-only access to Google Calendar events and Google Tasks. It does not write calendar-selection changes through the Google Calendar API. Creating or editing events and tasks in the embedded Google Calendar website is a separate workflow governed by your Google account permissions.

Consent and Revocation: Users are prompted to grant consent through Google's authorization flow, with information about the data being accessed. Consent can be withdrawn at any time through Google account permissions or by removing the connected account from the App.

No Unauthorized Sharing: Data accessed from Google is not shared with third parties or transferred out of your device.

> The use of information received from Google APIs will adhere to the Google API Services User Data Policy, including the Limited Use requirements.

04

Third-Party Services

The only third-party service provider the Service uses is Google, for Google account authorization and Google Calendar and Google Tasks integration. These services may collect information used to identify you. Google's use of information collected through its services follows its own Google Privacy Policy.

05

Your Rights

Since we do not collect personal data on Soriian servers, the Service does not hold data that would enable us to directly address individual data subject rights under the GDPR or other privacy laws. For inquiries about data collected by Google services, refer to the Google Privacy Policy and Google's support resources. You can remove locally stored account data by removing the connected account from the App.

06

Website Information Collection Practices

The Website is informational. You cannot sign in, connect a Google account, or run workflows in the App through the Website.

Website Analytics: The Website uses a limited self-hosted analytics script to send a basic ping for activity such as page views, referrers, and download clicks. The analytics endpoint is operated on our own server, IP addresses are anonymised, and website analytics are separate from Google APIs and are not used to access, collect, or share Google user data.

Website Visitors: We do not collect personal information from Website visitors unless it is voluntarily

Website Visitors: We do not collect personal information from Website visitors unless it is voluntarily provided, for example by contacting us by email. Information provided this way is used only for the stated purpose, such as responding to your query.

Third-Party Links: The Website may contain links to other websites. We are not responsible for their content or privacy practices and encourage you to review their privacy statements.

07

Changes to This Privacy Policy

We may update this Privacy Policy from time to time. Updates will be posted on this page.

08

Contact Us

If you have any questions or concerns about this Privacy Policy or our practices, please contact us at contact@soriian.com.
