NOTION LOOK-ALIKE BRANDING AND PRIVACY WARNING · PRODUCTIVITY

Four paid Mac apps borrow Notion's identity. The privacy documents tell another story.

Four paid Mac apps put "for Notion" in their names and a prominent black-and-white N in their icons. Their combined names, artwork and promotional use of Notion's logo can make independent subscriptions look like official Notion products. The four sellers use different Apple accounts. Static analysis confirms real Notion integration, while the documents expose a contact-only privacy link, policies for other products and AI processing that users need explained clearly.

Apple developer accounts: **Muhammad Abait · Apple developer 6825284962** · **Waleed Arshad · Apple developer 6776619521** · **App Sensor / APP SENSOR LLP · 6790821136** · **Awais Mobeen · 1793533465**

VISUAL EVIDENCE

Start with the closest visual imitations of Notion

Awais Mobeen's tilted frame and serif N closely echo Notion's cube-and-letter identity. Muhammad Abait adds a thick frame and sync badge. These original Apple images show recognisable borrowing with visible differences; the assessment concerns the icon, name and marketing together. The next comparison covers the other two sellers. E2/E4/E20.

Task & Todo for Notion · Awais Mobeen

Original current Apple icon: tilted frame, large serif N and two underline strokes. E20.

Official Notion · Notion Labs

Original official Notion mobile-app icon, used as the brand reference. Apple-hosted image retrieved 21 November 2026. E4.

Todo List:Workspace For Notion · Muhammad Abait

Original current Apple icon: framed N with sync badge. E2.

Official Notion · Notion Labs

Original official Notion mobile-app icon, used as the brand reference. Apple-hosted image retrieved 21 November 2026. E4.

Two more versions of the same Notion-led identity

Arshad uses a serif N with two underline strokes. App Sensor uses a rounded sans-serif N on a clipboard, so its letterform is less similar than the others. Its Notion-led title and prominent Notion badge in the first promotion still place Notion's identity at the centre of the sales pitch. Neither resemblance nor use of a compatibility badge alone proves fraud.

Todo List & App for Notion · Waleed Arshad

Serif N with two underline strokes; original Apple icon. E3.

Official Notion · Notion Labs

Original official Notion mobile-app icon, used as the brand reference. Apple-hosted image retrieved 21 November 2026. E4.

Todo & Tasks for Notion · App Sensor

Clipboard containing a rounded N; original Apple icon. The different letterform is preserved. E19.

Official Notion · Notion Labs

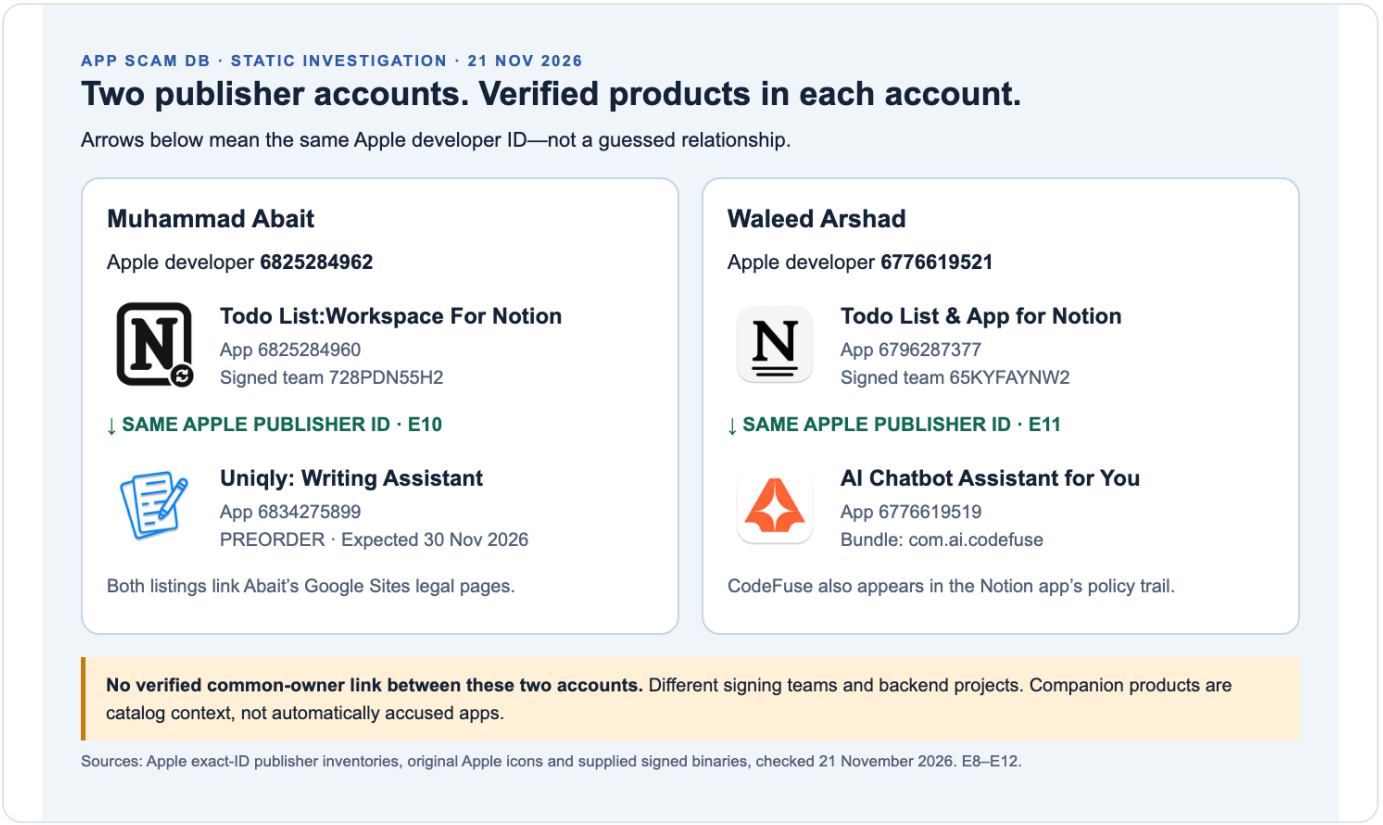

Original official Notion mobile-app icon, used as the brand reference. Apple-hosted image retrieved 21 November 2026. E4.

Original current Apple artwork and official Notion reference. E3/E4/E19.

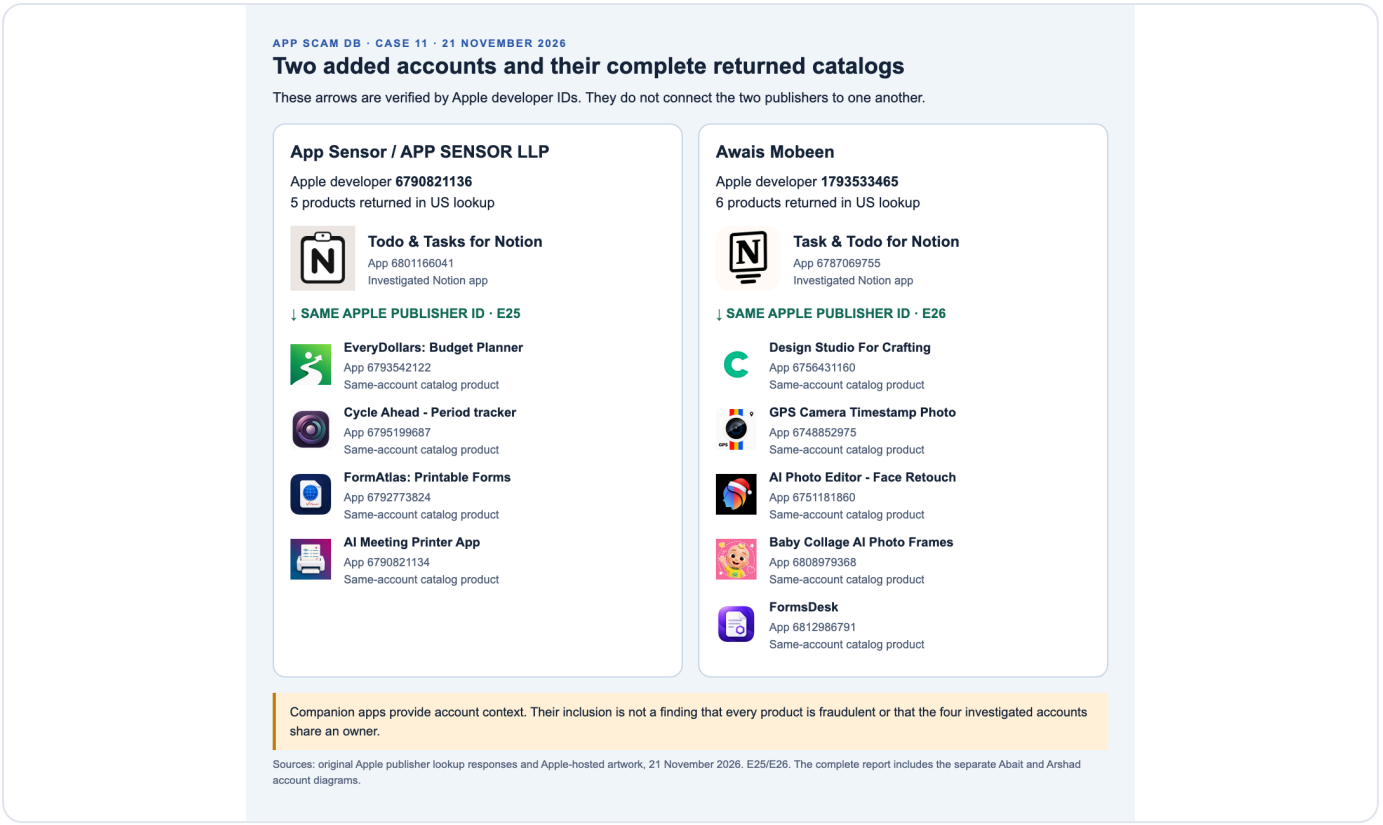

Four publisher accounts and their verified products

Apple identifies four different publishers: Muhammad Abait (6825284962), Waleed Arshad (6776619521), App Sensor / APP SENSOR LLP (6790821136), and Awais Mobeen (1793533465). The diagrams show products joined by the exact same Apple developer ID. No shared-owner arrow joins the four accounts.

The current US lookups return two products for Abait, two for Arshad, five for App Sensor and six for Mobeen. Abait's Uniqly remains a preorder. Companion products are account inventory, not automatically accused apps; they have not all undergone binary testing.

Verified same-account connections, Apple developer IDs, app IDs and original app icons. Abait's Uniqly is a preorder; Arshad's chatbot is a separate product. No shared owner between the two accounts was established. E10/E11/E12.

App Sensor and Awais Mobeen: all products returned by current Apple publisher lookups, with original icons. Arrows mean the same publisher ID; no cross-account ownership is asserted. E25/E26.

Apple rules this evidence puts in question

Apple should review the combined naming and icon presentation of all four apps. The clearest document failures are Arshad's contact-only privacy link and Mobeen's terms naming Invitation Maker instead of this task app. These are evidence-based compliance concerns, not an Apple enforcement decision.

Specific rules and the evidence Apple can verify

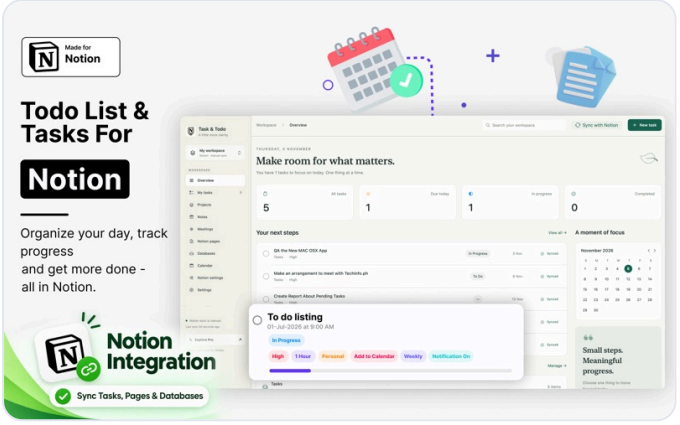

Rule	Application to this case
2.3 / 2.3.1 · Accurate presentation	Assess the Notion-led identities against the actual independent sellers. E2/E3/E19/E20.
2.3.7 · Names and keywords	Assess third-party names alongside the N-based icons and promotional branding. E2/E3/E19/E20.
4.1 / 5.2.1 · Copycats and intellectual property	Check the visual identity and each seller's authorisation; preserve the differing App Sensor clipboard design. E4/E14/E19/E20.
5.1.1(i) · Privacy policy	Contact-only privacy link, CodeFuse document and Invitation Maker terms. E7/E9/E24. The terms issue also concerns accurate documentation under 2.3.
5.1.2(i) · Data sharing	Review app-specific disclosure and consent for AI data paths; no missing-consent finding is established. E8/E9.
1.6 · Data security	Review Arshad's client-side AI-key loading design; live exposure was not tested. E9.

A familiar identity is being used to sell a separate app.

01

What users recognise

Four Notion-led names, N-based monochrome icons and Notion branding in the original promotions; each app has its own independent seller.

Original Apple listings and artwork.

E2 E3 E4 E19 E20

02

A concrete privacy failure

Arshad's listing privacy link opens contact information; its binary policy describes CodeFuse. Mobeen's linked terms describe Invitation Maker. App Sensor's documents explicitly choose Pakistan as legal jurisdiction.

Live public pages and static URL references.

E3 E7 E9 E23 E24

03

What the code actually does

All four supplied builds contain real Notion API and Keychain code. Abait, Arshad and Mobeen have separate AI implementations; App Sensor's supplied build has no recovered AI service endpoint.

Static inspection of signed binaries; no app executed.

E8 E9 E21 E22

04

What links were established

15 products are linked within four distinct Apple publisher accounts by exact IDs. No extra common-owner account was established from common SDKs or shared service APIs.

Apple account inventories and retained cross-check results.

E10 E11 E12 E25 E26 E27

Four independent subscriptions: compare the yearly cost

Current US listing prices checked 21 November 2026. They pay the independent sellers, not evidence of an official Notion subscription. No checkout was tested; actual in-app offers may differ, particularly where the supplied build differs from listing metadata.

Estimated yearly cost of the listed weekly offers: $155.48–$363.48

The table compares the independent sellers' displayed weekly offers with their yearly plans. The higher cost alone does not establish a scam. The concern is whether Notion-led names and artwork cause buyers to mistake what they are paying for.

Standard annualisation of displayed prices; actual renewal dates and checkout offers can vary. No revenue or actual customer spending is claimed.

The name on the listing.

App name

Four independent Notion-branded task apps

Version

Abait binary 1.3 (1.3.1); Arshad 1.4 (5); App Sensor 2.0 (10); Mobeen 2.2 (2.3). App Sensor and Mobeen public listing versions differ from the supplied builds; see build table.

First released

Abait: 1 Nov 2026; Arshad: 5 Aug 2026; App Sensor: 3 Sep 2026; Mobeen: 8 Jul 2026.

Real integration does not make these apps official

All four signed binaries contain Notion API clients. A truthful compatibility reference can be legitimate; third-party Notion tools are not inherently scams. The issue is using Notion-led names and familiar N-based artwork as the product's own sales identity.

Notion's published guidance permits accurate compatibility descriptions but says a product should lead with its own name and keep the compatibility phrase secondary. It also prohibits confusing imitation of its logo and identity. The report's assessment concerns that combined presentation; private permission or a licence was not established.

Arshad and App Sensor explicitly disclaim affiliation with Notion. Those disclosures matter, and Notion offers compatibility badges for integrations. Buyers nevertheless encounter the app's name and icon before the full description. Assess the overall presentation rather than treating either a disclaimer or a badge as conclusive.

Three captured identities, all already using Notion

The supplied dossier documents two icon changes for Abait's app: N with three dots, then a cube/checklist/pencil, then a framed N with a sync badge. The first observed snapshot was 5 November, four days after Apple's first-release date. Its title already contained "For Notion".

This proves changes in marketing identity during monitoring. It does not prove that a harmless, unbranded launch was used to bypass App Review; Apple's original submission and internal review records are not available.

A contact page and a policy for CodeFuse

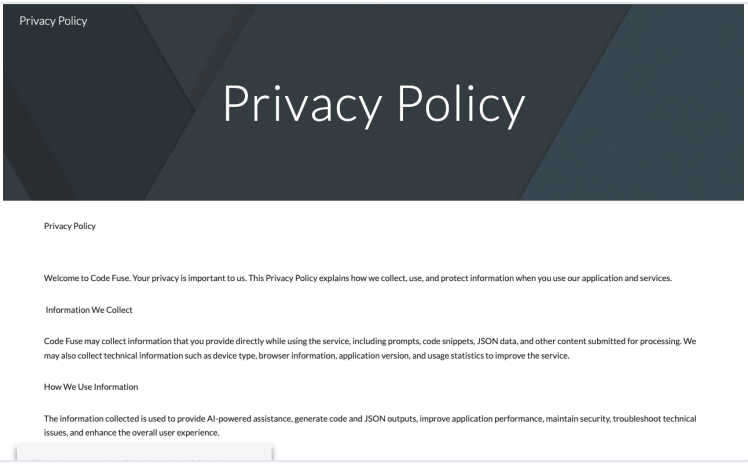

Arshad's App Store "Privacy Policy" link currently opens a Google Sites support page containing only contact information. It does not explain what this Notion app collects, how long data is retained or how it is deleted.

The signed binary contains a different privacy URL. That page opens successfully, but describes CodeFuse: prompts, code snippets and JSON outputs. It does not give a meaningful app-specific explanation of Notion tokens, task databases, calendars and task-assistant data. Both pages use the same public support contact, connecting the documents to this seller's product trail.

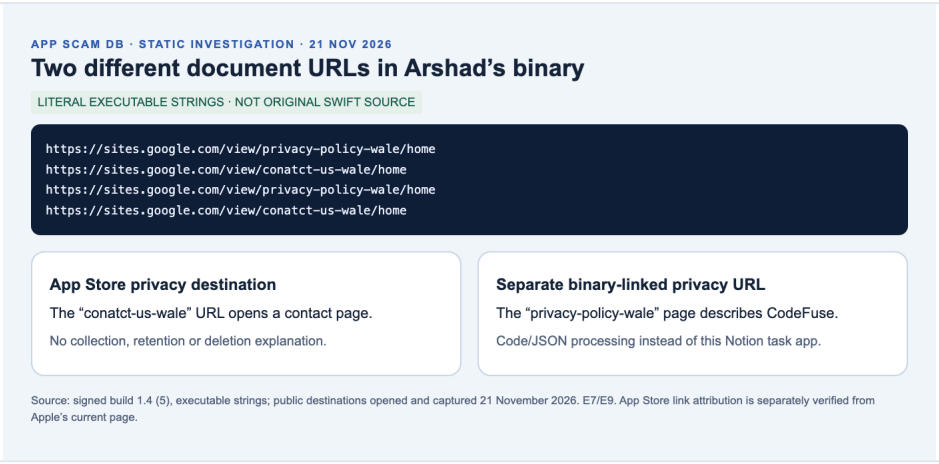

Abait's linked policy is also hosted on Google Sites. It is a broad iOS/Android policy covering identifiers, advertising, camera/facial features and AI processing. It does mention AI; the deficiency is that it leaves the data handling of this Mac workspace unclear. Free hosting alone is not evidence of fraud.

The actual destination of Arshad's App Store privacy link: Contact Us. Browser capture, 21 November 2026. E7.

Different privacy URL recovered from Arshad's signed binary: a CodeFuse policy describing code and JSON processing. Browser capture, 21 November 2026. E7/E9.

Static code evidence: listing-support and separate privacy URL literals in Arshad's binary. The URLs were opened as public pages; no app was executed. E9.

Open listing privacy destination Open binary-linked CodeFuse policy Open Abait's all-app privacy policy

E6/E7/E8/E9. Web pages captured 21 November 2026. Policy language about possible collection is not proof that every listed feature collects data.

Where the code is designed to send information

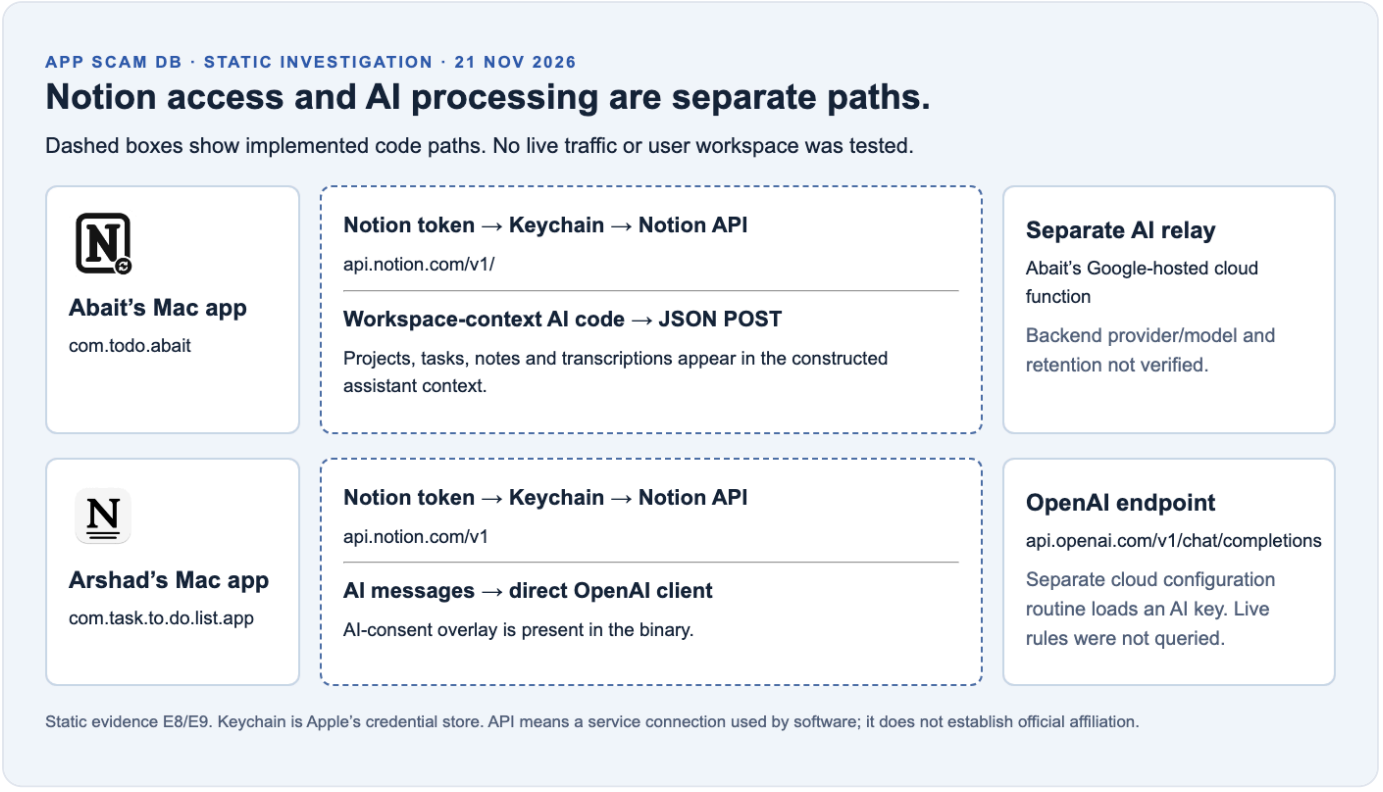

A Notion token is a key that lets an app access the content permitted by that key. All four supplied builds contain native Notion API clients and Keychain credential code. Manual integration tokens are supported by Notion; OAuth is another option, not a mandatory legitimacy test.

Abait's app assembles an AI context describing projects, tasks, notes and meeting transcriptions. Its code constructs a JSON POST and a Google-hosted chatGPT function URL belonging to its own Firebase project. That is a separate processing route from Notion. Static inspection establishes the implemented data path; no real workspace, packet capture or server retention was tested.

Arshad's app contains a direct OpenAI chat-completions client and an AI consent overlay. It also contains a routine for loading an AI key from a cloud configuration document, including an error message recommending publicly readable rules. This is a security design warning, not a demonstrated live credential leak: the document and live rules were not queried, and no recovered credential was used.

Mobeen's build contains Notion sync, iCloud sync and a direct OpenAI client for meeting-transcript actions. App Sensor's supplied build contains local task storage and two-way Notion sync; no OpenAI endpoint, AI relay or Firebase configuration was recovered from that build. The broad App Sensor website discusses AI across its products, which does not establish hidden AI processing in this particular app.

Both store pages say Data Not Collected. Sending information off-device does not automatically contradict that label: Apple distinguishes real-time request processing from longer retention. The backends' actual retention and logging need verification. The poor or wrong-product privacy explanations are established independently of that unanswered question.

Implemented Notion and AI paths in the supplied builds. Dashed arrows mean static code paths, not network requests observed during this investigation. E8/E9.

Notion and meeting-notes AI paths are separate. Retrieved public listing: 2.0. Version differences are recorded; they are not treated as fraud evidence.

E21/E22: original supplied signed executables, ARM64 disassembly, class names and literal strings. Apple teams A2NH9H6XFK and 52CLWC5BG9. No Notion credentials, cloud keys or user data are shown.

New signed builds: real Notion routes and Keychain storage, Mobeen's meeting-notes AI endpoint, and the App Sensor listing/build version difference. Static evidence, not live traffic. E21/E22.

Notion's supported authentication methods Apple's definition of data collection

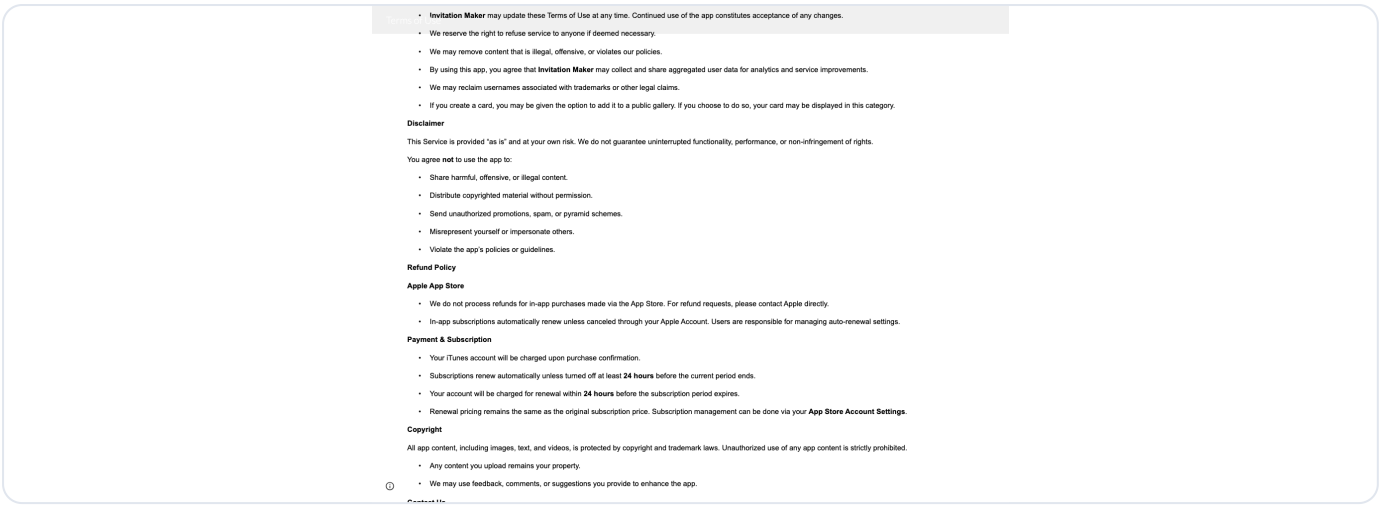

E8/E9/E21/E22: static code, not runtime traffic. E16/E17: official Notion and Apple documentation. Live credential stores and private backend data were not queried.

The two added apps: real sync, different disclosure problems

App Sensor's Todo & Tasks for Notion contains a substantial native Notion client and two-way sync code. It stores the integration token in Keychain and its interface explains how to share pages with the connection. Its clipboard N differs from Notion's serif cube icon; the concern is the combined Notion-led naming and marketing, not a claim that the app has no functionality.

Mobeen's Task & Todo for Notion also implements Notion access and Keychain storage, with optional iCloud sync and an AI path for meeting notes. Its linked privacy policy names Firebase Analytics/Crashlytics and discusses uploaded facial images. Its terms repeatedly name Invitation Maker and public card galleries. That is a concrete wrong-product document problem for a task, workspace and meeting app.

Mobeen's binary includes Crashlytics and Firebase Sessions components. Their actual collection and runtime settings were not tested, so the report does not treat SDK presence as a completed transmission. The seller's own data-collection language deserves reconciliation with its Data Not Collected label.

- **Invitation Maker** may update these Terms of Use at any time. Continued use of the app constitutes acceptance of any changes.

This Service is provided "as is" and at your own risk. We do not guarantee uninterrupted functionality, performance, or non-infringement of rights.

You agree **not** to use the app to:

- Share harmful, offensive, or illegal content.
- Distribute copyrighted material without permission.
- Send unauthorized promotions, spam, or pyramid schemes.
- Misrepresent yourself or impersonate others.
- Violate the app's policies or guidelines.

Refund Policy

Apple App Store

- We do not process refunds for in-app purchases made via the App Store. For refund requests, please contact Apple directly.
- In-app subscriptions automatically renew unless canceled through your Apple Account. Users are responsible for managing auto-renewal settings.

Payment & Subscription

- Your iTunes account will be charged upon purchase confirmation.
- Subscriptions renew automatically unless turned off at least **24 hours** before the current period ends.
- Your account will be charged for renewal within **24 hours** before the subscription period expires.
- Renewal pricing remains the same as the original subscription price. Subscription management can be done via your **App Store Account Settings**.

Copyright

All app content, including images, text, and videos, is protected by copyright and trademark laws. Unauthorized use of any app content is strictly prohibited.

- Any content you upload remains your property.
- We may use feedback, comments, or suggestions you provide to enhance the app.

Mobeen's linked Terms of Use repeatedly name Invitation Maker. Loaded public document capture, 21 November 2026. E24.

Mobeen's privacy policy Mobeen's Invitation Maker terms App Sensor privacy policy

E19–E24. All code findings refer to the exact signed supplied builds.

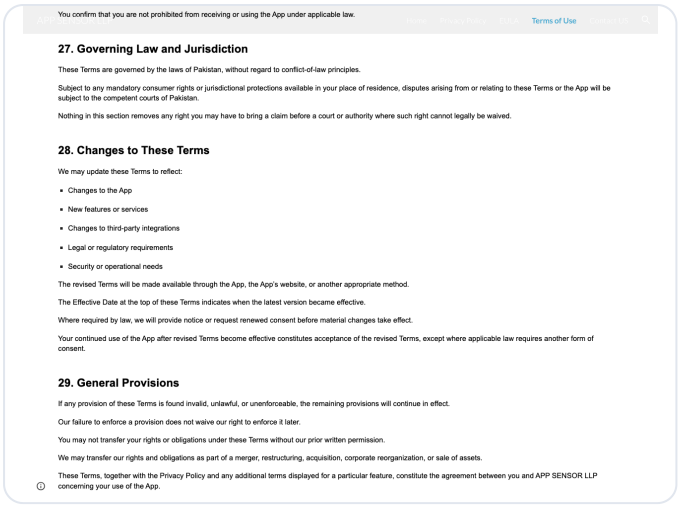

Pakistan: an explicit legal declaration for App Sensor

App Sensor's own linked Terms and EULA both select Pakistani law and Pakistani courts. That is a direct, app-linked Pakistan association, rather than a guess from a name. It establishes the developer's declared legal jurisdiction; it does not identify a registered office, company registration number, owner or nationality.

All four inspected German and Irish provider panels show non-trader declarations without a business address. The other three sellers' names and support pages did not produce a verified seller-linked Pakistan location. Similar-name professional profiles were excluded where no contact, product or technical identifier tied them to the Apple account.

The extra scans found the build-user name macgenics in Mobeen's embedded library build paths. No public company or account match was established from that name, so it was not converted into a country or ownership claim.

The deeper check also followed the other products on the three individual accounts. Mobeen's GPS Camera website and older named support form do not disclose a business country. The public domain-registration entry for the separate Tasker support domain identifies a registrar, not this seller. None of these sources supplies the missing identity link needed to attribute a same-name professional profile to the Apple account.

You confirm that you are not prohibited from receiving or using the App under applicable law.

27. Governing Law and Jurisdiction

These Terms are governed by the laws of Pakistan, without regard to conflict-of-law principles.

Subject to any mandatory consumer rights or jurisdictional protections available in your place of residence, disputes arising from or relating to these Terms or the App will be subject to the competent courts of Pakistan.

Nothing in this section removes any right you may have to bring a claim before a court or authority where such right cannot legally be waived.

28. Changes to These Terms

We may update these Terms to reflect:

- Changes to the App
- New features or services
- Changes to third-party integrations
- Legal or regulatory requirements
- Security or operational needs

The revised Terms will be made available through the App, the App's website, or another appropriate method.

The Effective Date at the top of these Terms indicates when the latest version became effective.

Where required by law, we will provide notice or request renewed consent before material changes take effect.

Your continued use of the App after revised Terms become effective constitutes acceptance of the revised Terms, except where applicable law requires another form of consent.

29. General Provisions

If any provision of these Terms is found invalid, unlawful, or unenforceable, the remaining provisions will continue in effect.

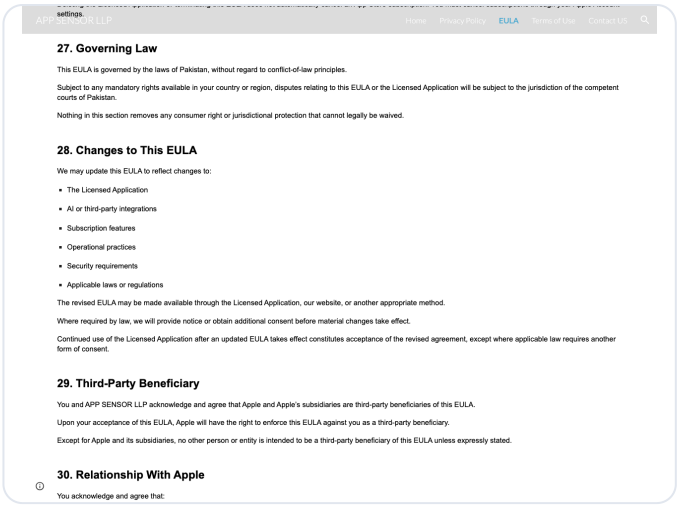

Our failure to enforce a provision does not waive our right to enforce it later.

You may not transfer your rights or obligations under these Terms without our prior written permission.

We may transfer our rights and obligations as part of a merger, restructuring, acquisition, corporate reorganization, or sale of assets.

These Terms, together with the Privacy Policy and any additional terms displayed for a particular feature, constitute the agreement between you and APP SENSOR LLP concerning your use of the App.

App Sensor's linked Terms: section 27 selects Pakistani law and courts. This is a legal-jurisdiction declaration, not a verified office address. Browser capture, 21 November 2026. E23.

settings.

27. Governing Law

This EULA is governed by the laws of Pakistan, without regard to conflict-of-law principles.

Subject to any mandatory rights available in your country or region, disputes relating to this EULA or the Licensed Application will be subject to the jurisdiction of the competent courts of Pakistan.

Nothing in this section removes any consumer right or jurisdictional protection that cannot legally be waived.

28. Changes to This EULA

We may update this EULA to reflect changes to:

- The Licensed Application
- AI or third-party integrations
- Subscription features
- Operational practices
- Security requirements
- Applicable laws or regulations

The revised EULA may be made available through the Licensed Application, our website, or another appropriate method.

Where required by law, we will provide notice or obtain additional consent before material changes take effect.

Continued use of the Licensed Application after an updated EULA takes effect constitutes acceptance of the revised agreement, except where applicable law requires another form of consent.

29. Third-Party Beneficiary

You and APP SENSOR LLP acknowledge and agree that Apple and Apple's subsidiaries are third-party beneficiaries of this EULA.

Upon your acceptance of this EULA, Apple will have the right to enforce this EULA against you as a third-party beneficiary.

Except for Apple and its subsidiaries, no other person or entity is intended to be a third-party beneficiary of this EULA unless expressly stated.

30. Relationship With Apple

You acknowledge and agree that:

App Sensor's EULA separately selects Pakistani law and competent Pakistani courts. Browser capture, 21 November 2026. E23.

App Sensor Terms · governing law App Sensor EULA · governing law

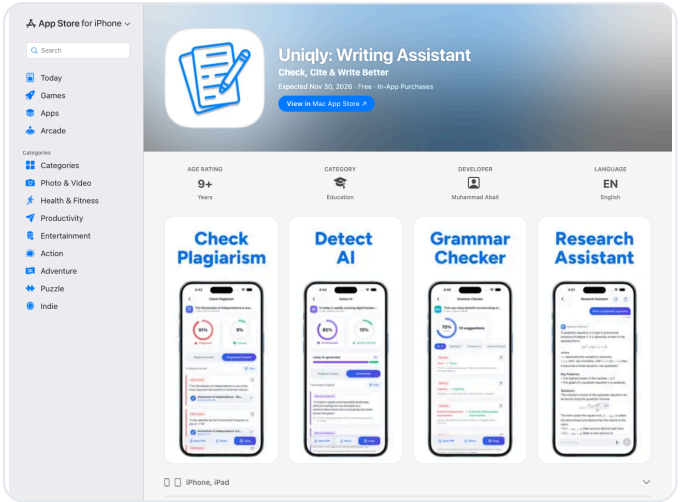

E5/E18/E19/E20/E23/E27. Business-country fields remain Unknown; the explicit App Sensor legal-jurisdiction association is recorded separately. E28: extended individual-publisher identity and related-product support checks.

Exact builds, different teams and documented cross-checks

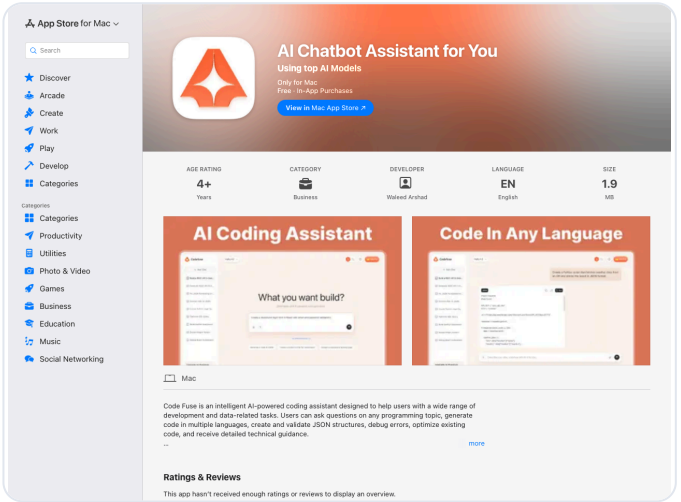

All four supplied apps are native Swift applications with valid Apple signatures. Their signing teams, bundle identifiers and own service configurations differ. A valid signature identifies the signing team; it does not endorse the marketing.

The expanded cross-check covers 28 retained analyses, including these four. A repeated Google logging string was traced to Firebase SDK context and excluded from ownership evidence. Shared Notion/OpenAI endpoints and common framework code likewise do not establish one operator.

App Sensor's supplied build is 2.0 (10), while its retrieved US listing says 1.0.4. Mobeen's supplied build is 2.2 (2.3), while its listing says 2.0. These differences may reflect distribution or listing timing; results are tied to the supplied builds and are not a version-mismatch fraud finding.

Apple companion listing: Uniqly, Muhammad Abait, expected 30 November 2026. Browser capture 21 November 2026. E10.

Apple companion listing: AI Chatbot Assistant for You, Waleed Arshad. Its description still calls the app CodeFuse. Browser capture 21 November 2026. E11.

Exact Store IDs and signed builds; listing versions are separate observations

Publisher / app ID	Signed build	Apple team / bundle	Retrieved listing version
Muhammad Abait · 6825284960	1.3 (1.3.1)	728PDN55H2 / com.todo.abait	1.3
Waleed Arshad · 6796287377	1.4 (5)	65KYFAYNW2 / com.task.to.do.list.app	1.4
APP SENSOR LLP · 6801166041	2.0 (10)	A2NH9H6XFK / com.appsensor.taskora	1.0.4
Awais Mobeen · 6787069755	2.2 (2.3)	52CLWC5BG9 / com.task.todo.list.ai	2.0

Uniqly: Writing Assistant · preorder AI Chatbot Assistant for You · same Arshad account

E8/E9/E12/E18/E21/E22/E27. Retained original analysis and verified indicator supplements; no apps launched.

Do the four binaries connect the sellers?

Every pair was compared using exact ARM64 function bytes, packaged-file hashes, asset-catalog digests, readable strings and recovered short Swift strings. The question was whether the apps share their own code, artwork or service accounts—not simply the libraries available to every Mac developer.

The identical packaged files are standard SDK privacy manifests or the generic Mac application marker. No matching image rendition was found across the four catalogs. Their shared AppIcon multi-size catalog descriptor lists standard icon sizes; it is not the icon's pixels. Shared longer text consists of framework messages and Apple certificate wording.

Small identical functions remain in all pairs. The largest inspected matches perform generic number parsing or low-level atomic state operations, without product-specific names or a shared service configuration. These matches are insufficient to attribute a shared app codebase or owner. The cloud projects recovered for Abait, Arshad and Mobeen are different; App Sensor's supplied build has no recovered Firebase configuration.

The confirmed links are within each Apple account, as shown above. This comparison did not establish an additional account controlled by the same person. Shared visual marketing can justify a branding review without inventing an ownership connection.

Exact machine-code matches requiring provenance; these are not ownership links

Compared publishers	Matching function byte ranges	Matching app-specific image renditions
Abait / Arshad	12	0
Abait / App Sensor	10	0
Abait / Mobeen	14	0
Arshad / App Sensor	13	0
Arshad / Mobeen	17	0
App Sensor / Mobeen	17	0

E8/E9/E21/E22/E27. Six pairwise comparisons; ARM64 function threshold of 96 bytes. Retained exact hashes, addresses, catalog records and exclusions remain in the private analysis archive.

The complete returned account inventories

These are the products returned by US publisher lookups on 21 November 2026. “Related” means the exact same Apple account here; it is not an accusation against every listed product. Availability can change, and this inventory is not a historical list of everything a seller has ever released.

15 products across four accounts

What Apple should examine

Compare all four store identities with Notion's original artwork and naming rules. Require the sellers to establish rights to the Notion-led names and look, and present their independent identity clearly before purchase.

Replace the contact-only privacy link and wrong-product policy with accurate explanations for each Mac app, including Notion access, AI destinations, retention and deletion. Verify consent in the actual released builds and review the client-side AI-key distribution design. The attached code excerpts, signatures and dated source pages make these checks reproducible.

Editorial request based on E1–E17; no Apple enforcement outcome is claimed.

What else changed?

The supplied monitoring dossier records three snapshots of app 6825284960. Both recorded updates changed its icon. The first captured name already said For Notion; these captures do not establish a brand-neutral launch or an App Review bypass.

E21 / Added signed binary: Todo Task.app

Static read-only inspection, 21 November 2026. Bundle com.appsensor.taskora, version 2.0 (10), team A2NH9H6XFK. Signature validates. Executable SHA-256 68e5b2eaaa573bf3358c96104b036b36cd6ffc0887becb57562e05ca9fa37a34. This supplied build differs from the retrieved listing version; no app executed.

`SHA-256: 302ee4a6e9ef90f6568693b0525d3933514552c2257cdf6f2f49c0ac7e1beb21`

E22 / Added signed binary: Task & Todo.app

Static read-only inspection, 21 November 2026. Bundle com.task.todo.list.ai, version 2.2 (2.3), team 52CLWC5BG9. Signature validates. Executable SHA-256 8d8a04ae2cc5af67af027c119f251144afd49e47146b2b337943da59025917af. This supplied build differs from the retrieved listing version; no app executed.

`SHA-256: 200782cbc9a9f6c69cfb71494584fde456cb73f4792c7d01d324b4d335191d90`

E23 / App Sensor developer-linked Terms and EULA

Both documents explicitly select Pakistani law and courts. Terms section 27; separate EULA at sites.google.com/view/appsensor/eula. These are declared legal-jurisdiction statements, not verified company-registration or ownership records. Captured 21 November 2026.
Open source ↗

E24 / Mobeen developer-linked policy and Invitation Maker terms

Privacy page names Firebase Analytics/Crashlytics and image processing; terms describe Invitation Maker/card galleries. Both use the same public support contact. Documents linked in the listing and signed binary, checked 21 November 2026.
Open source ↗

E25 / App Sensor complete current US account lookup

Apple developer 6790821136 returns five products. Exact IDs, original icons and bundle IDs retained; checked 21 November 2026.
Open source ↗

E26 / Awais Mobeen complete current US account lookup

Apple developer 1793533465 returns six products. Exact IDs, original icons and bundle IDs retained; checked 21 November 2026.
Open source ↗

E27 / Expanded static, contact and geographic cross-check

28 retained analyses (four investigated here plus 24 other builds); original raw strings/configuration and SDK provenance reviewed. Common Google logging marker traced to SDK context and excluded; common service endpoints excluded. All non-receipt paths scanned with ASCII, UTF-16 and recovered Swift small-string methods. Build-user macgenics found only in Mobeen; no public attributable company/account match established. No private backend or credential document was accessed. Six pairwise ARM64 function/hash, packaged-file, asset-catalog and string comparisons completed. No shared application-specific image rendition or attributable common app backend established; standard multi-size icon descriptors, SDK manifests, generic integer/atomic helpers and certificate text excluded from ownership evidence.

E28 / Extended individual-publisher identity and related-product support checks

Original account catalogs, exact public support contacts, GPS Camera website and older named app help desk, plus public registry and profile-link checks on 21 November 2026. No seller-linked registered office recovered for the three individual publishers. Same-name professional profiles, generic host locations and sample GPS coordinates excluded from country attribution.

Data Not Collected

Icon compared with the official apps of the brands it mentions

	**This app**	
	Notion: Notes, Tasks, AI by Notion Labs, Incorporated official notion app · App ID 1232780281	**22%** different
	Microsoft Teams by Microsoft Corporation official teams app · App ID 1113153706	**4%** different
	Google Drive by Google official google app · App ID 507874739	**1%** different
	Apple Music by Apple official apple app · App ID 1108187390	**0%** different

The brands are those named in the listing (name, subtitle, description, text in the screenshots); the official app of a brand is the App Store app with the brand in its name and the most ratings. Similarity is an automatic estimate; from 52% the icons count as similar.

Description

Your tasks, projects, notes, and meetings finally in one place, with AI that knows them all.
Record a meeting, get the transcript, and ask your AI assistant what to do next. Planning your workday has never been this effortless.

Todo List: Workspace For Notion brings everything you need to stay organized into a single, beautifully simple Desktop app. Manage projects on a Kanban board, capture rich notes, record and transcribe meetings, and chat with an AI assistant that understands your work.

DASHBOARD - YOUR DAY AT A GLANCE
• A personal greeting that changes with the time of day
• Live date and time, always in view
• Built-in calendar with upcoming events highlighted
• Your projects and a Kanban task board side by side
• Move tasks between To Do, In Progress, and Done in a click

PROJECTS & TASKS - ORGANIZED YOUR WAY
• Create unlimited projects with titles and descriptions
• Add tasks to any project with due dates and status
• Write detailed task descriptions with full text formatting
• Filter tasks instantly: All, To Do, In Progress, Done
• Color-coded statuses so you see progress at a glance
• Edit and update projects and tasks anytime

SMART REMINDERS
• Get notifications for upcoming tasks so nothing slips through the cracks

NOTES - CAPTURE EVERY IDEA
• Create rich notes with a full-featured text editor
• Preview, edit, and copy notes in seconds
• Save any note as a PDF and share it instantly

MEETING RECORDER & TRANSCRIPTION
• Record meetings with one click - pause and resume anytime
• Watch a live waveform while you record
• See your transcript appear in real time
• Play back recordings with the full transcript below
• Copy transcripts, export to PDF, and share with your team

AI ASSISTANT - YOUR PERSONAL WORK COMPANION
• Ask anything about your tasks, notes, and meetings
• Type your question or simply speak it with voice input
• Get instant summaries, answers, and next steps
• Copy any question or answer with one click
• Export your entire conversation as a PDF

PERFECT FOR
• Professionals juggling multiple projects
• Freelancers and consultants managing clients
• Students organizing assignments and lectures
• Teams that live in back-to-back meetings
• Anyone who wants a calmer, more productive workday

Stop switching between a to-do app, a notes app, a voice recorder, and a chatbot. ToDo List: AI WorkSpace For Notion does it all - beautifully, on your Desktop.

Download now and take control of your workday.

Note: This app provides limited free access. Additional purchase is required to unlock premium features and unlimited use. Payment will be charged to your Apple Account at the time of purchase. Your subscription automatically renews unless you cancel at least 24 hours before the end of the current billing period. You can manage or cancel your subscription at any time in your App Store Account Settings.
