BRANDING, PRIVACY AND SUBSCRIPTION WARNING · AI CHATBOT AND BROWSER UTILITY

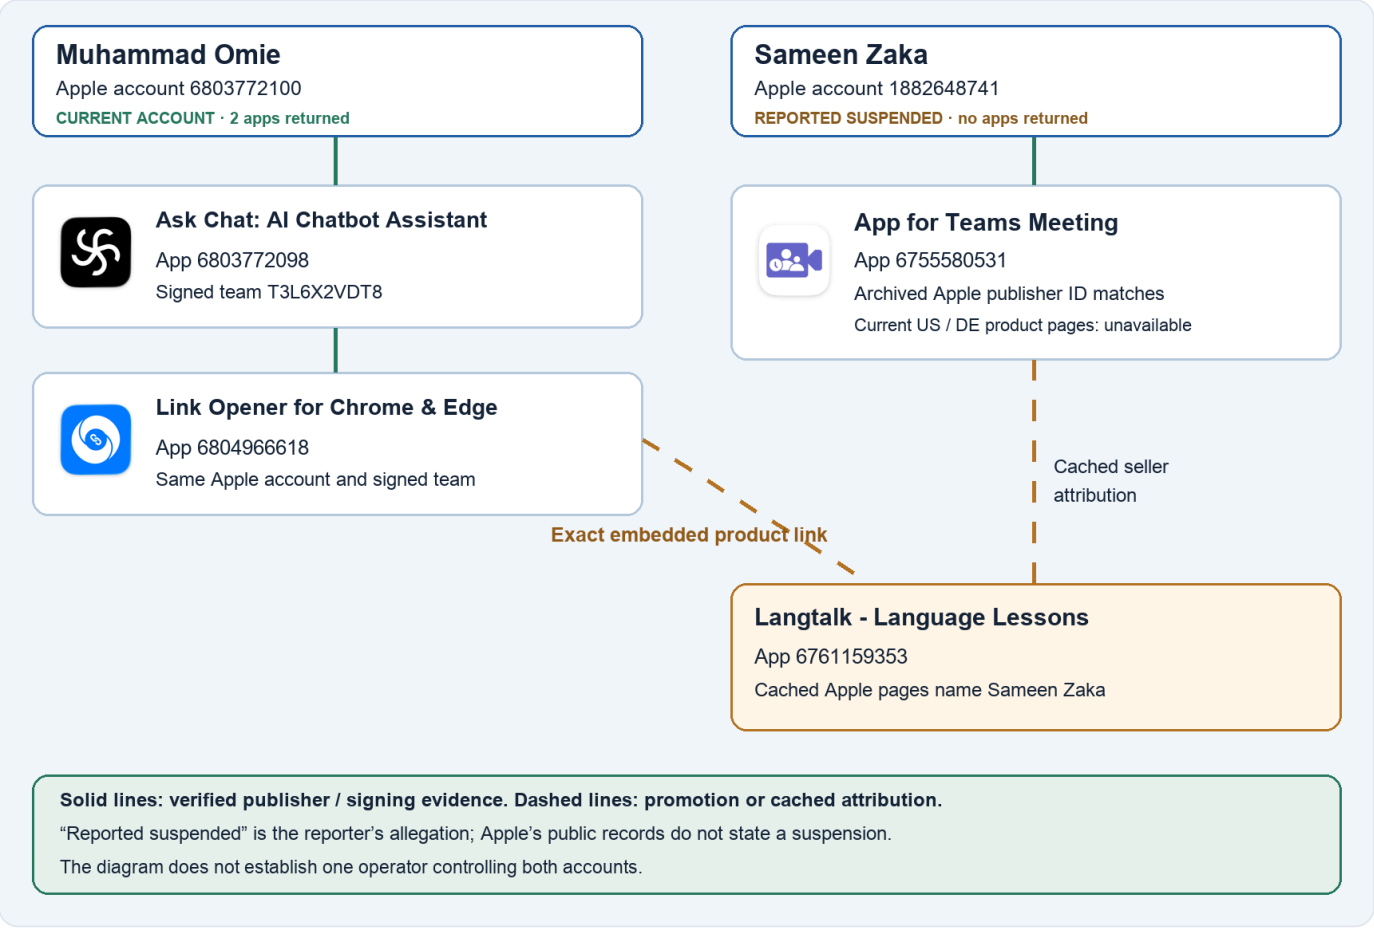

Scam warning: OpenAI and Chrome impersonation concerns, with a link to removed apps.

Muhammad Omie's current Link Opener app contains a promotion for Langtalk, a product indexed under Sameen Zaka, whose two known apps are now unavailable in the checked stores. The reporter alleges that Zaka's account was suspended and that the same operator is using Omie's account. The verified connection is the embedded product promotion; neither common ownership nor an Apple suspension decision has been established.

Apple developer accounts examined: **Muhammad Omie · 6803772100** · **Sameen Zaka · 1882648741 · archived Teams publisher**

By Alex Kleber · Published 2026-11-19 · Updated 2026-11-19

Current account → account reported suspended

Original app icons in an editorial diagram. Left: current Omie account. Right: Sameen Zaka, reported suspended by the reporter; public profile remains and checked catalogs contain no apps. Dashed links show an embedded promotion or cached seller attribution, not a verified common owner. E5; E16; E21; E31–E33; E37–E38.

EXACT FILE EVIDENCE · READ-ONLY EXTRACTION · 19 NOVEMBER 2026

Where the Langtalk link is stored

```
Archive: Link Opener.zip
App: Link Opener.app
Bundle ID: com.mo.mac.openly
Version 1.0 / build 1
File inside app: Contents/MacOS/Link Opener
Executable SHA-256:
c77cbf0a2ee110ed23088ef89e0d8c0ee77ce7645f0f0228728490530ed405ee
Section: __TEXT,__cstring
Offsets below are zero-based bytes from the start of the universal file.
```

Build	File offset	Exact literal
x86_64	0x39eac0	Language learning app
x86_64	0x39eae0	settings_langtalk
x86_64	0x39eb00	https://apps.apple.com/us/app/langtalk-language-lessons/id6761159353?mt=12
arm64	0x8d58a0	Language learning app
arm64	0x8d58c0	settings_langtalk
arm64	0x8d58e0	https://apps.apple.com/us/app/langtalk-language-lessons/id6761159353?mt=12

These values are independently re-extracted from the supplied executable. Screenshot of rendered extraction output, not an application interface. E16; E39.

Exact location: Link Opener.app/Contents/MacOS/Link Opener, section __TEXT,__cstring. Table lists the original text, settings marker and exact Langtalk URL in both the Intel and Apple Silicon builds. Offsets count bytes from the start of the universal executable. Read-only extraction output rendered for inspection; not an in-app screenshot. E16; E39.

```

The marker `settings_langtalk` points to settings-related logic. The label reads **Language learning app**. The destination is Apple app **6761159353**.

Verbatim ARM64 instruction lines from macOS otool output. Addresses are code addresses, not the file offsets on the previous panel. The app was not launched; the live screen position and a completed click were not observed. E16; E39.

Exact code references: ARM64 instructions load settings_langtalk at 0x1000813a4 and the Langtalk destination at 0x1000813c8; separate UI instructions load Language learning app at 0x100082504 and pass it to SwiftUI text code. This supports settings-related promotional logic; the live app screen was not observed. Verbatim selected disassembly lines, rendered for inspection. E39.

Step 2: the recovered Teams Apple page visibly names Sameen Zaka. Its underlying Apple developer link identifies account 1882648741. Archive dated 6 September 2026; exact referenced artwork reloaded from retained 19 November Apple CDN responses. This confirms the Teams publisher; the Langtalk attribution remains based on indexed Apple content. E21; E31; E36.

The current account is Muhammad Omie / 6803772100. We found the Langtalk link inside its supplied Link Opener application, in the actual program file Link Opener.app/Contents/MacOS/Link Opener (version 1.0, build 1; bundle com.mo.mac.openly). The link is compiled into the program's text section, __TEXT,__cstring: a part of the executable that stores fixed text.

The exact destination is https://apps.apple.com/us/app/langtalk-language-lessons/id6761159353?mt=12. It appears immediately after the text "Language learning app" and the marker "settings_langtalk". All three values occur in both compiled builds: one for Intel Macs and one for Apple Silicon Macs. They are two copies inside one universal application.

The code also uses these values: the Apple Silicon instructions at 0x1000813a4 load settings_langtalk; 0x1000813c8 loads the exact Langtalk link. Separate instructions at 0x100082504 load Language learning app and pass it to Apple's SwiftUI text code, which builds interface labels. The settings_langtalk name points to settings-related promotional logic. We did not run the app, so a live Settings screen, the item's exact on-screen position and a completed click were not observed.

The publisher attribution comes from a separate source. Indexed Apple content for Langtalk names Sameen Zaka. The recovered Teams Apple archive then verifies Sameen Zaka's account number as 1882648741. Sameen Zaka's name and account number were not extracted from the Link Opener program. The screenshots below separate the executable evidence from the archived Apple page.

This is the connection between the accounts: an app from Omie's current account promotes a product historically attributed to Sameen Zaka. The reporter interprets it as the same operator returning through another account after suspension. That interpretation is an allegation; the files do not provide a shared signing team, a common owner or an Apple termination notice for these two publisher identities.

Sameen Zaka's public profile still opens, but the checked Apple catalogs return no apps. Both known product pages are unavailable in the checked stores. Omie's two supplied apps do share one verified signing team with each other; that verification does not extend to Sameen Zaka's apps.

What is verified for each account, and what is reported

Account	Verified public status	Account-circumvention claim
Current · Muhammad Omie · 6803772100	Ask Chat and Link Opener returned in the checked Apple catalog; supplied builds share signing team T3L6X2VDT8.	Reporter alleges this is the same operator. Common ownership with Sameen Zaka is not established.
Reported suspended · Sameen Zaka · 1882648741	Public profile persists; no software in checked catalogs. Langtalk and Teams pages unavailable in the checked stores.	Suspension is alleged by the reporter. Apple's public records do not state the administrative reason.

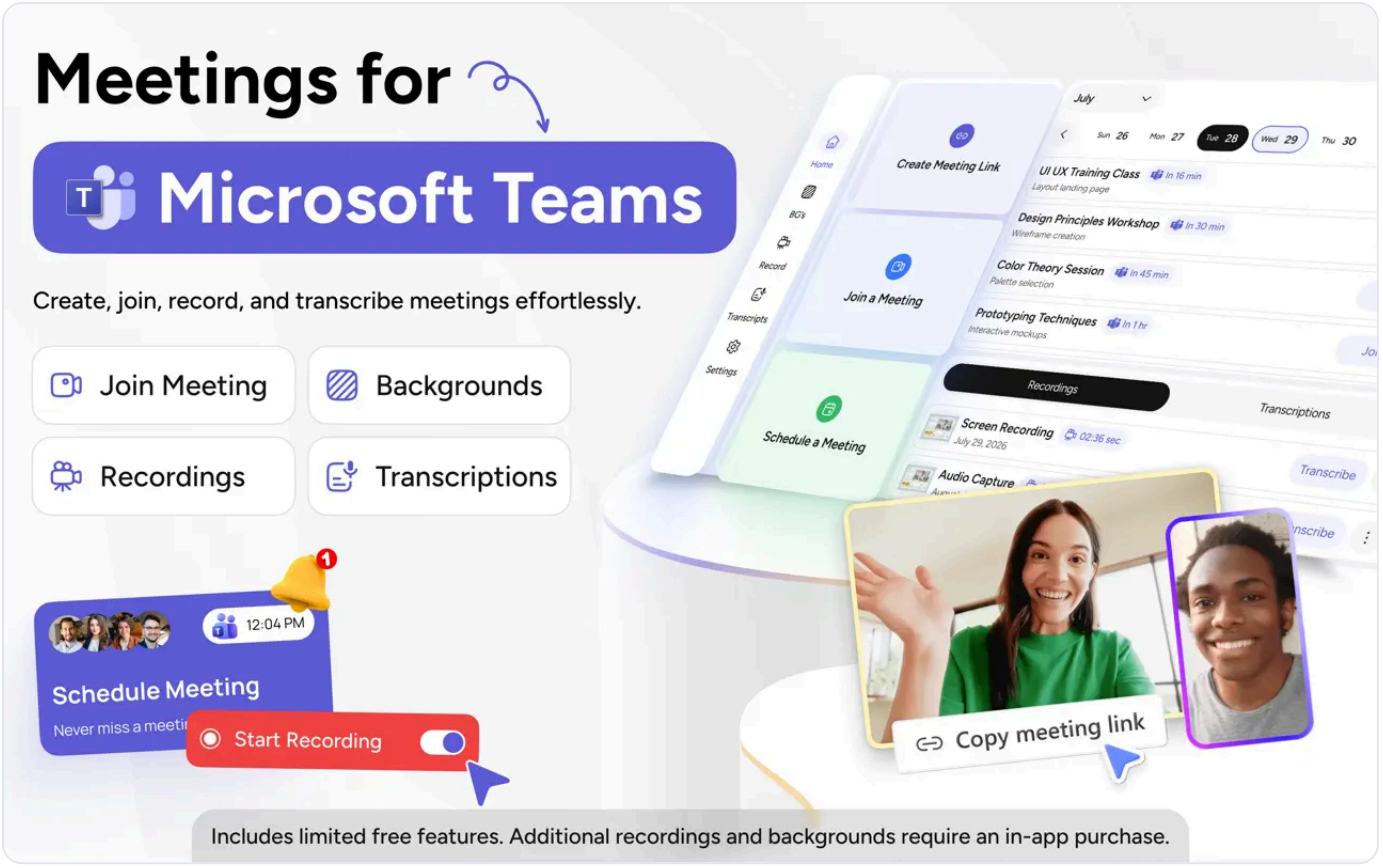

Open the Muhammad Omie Apple developer account **Recovered Sameen Zaka Apple profile · 1882648741**

E5; E15–E16; E21; E31–E33; E37–E38. Solid links and the external promotion link have different evidential meanings. E39 adds reproducible literal offsets and exact instruction references.

What was listed under Sameen Zaka?

Two products were identified under the Sameen Zaka name. The exact numeric publisher ID is verified directly for the Teams app by the recovered Apple archive. Langtalk's seller attribution comes from indexed Apple pages; its historical numeric developer ID was not recovered.

The strongest recovered branding evidence is the Teams advertisement below: the official Microsoft Teams name and product logo are prominent in the marketing for an independently sold app. The archived description also contains an explicit not-affiliated disclaimer.

Complete original Teams promotion referenced by the 6 September Apple archive; exact Apple CDN artwork retrieved 19 November 2026. The Microsoft Teams name and logo dominate the upper-left area. E31; E36.

Known former listings and their available evidence

App	Historical evidence	Checked availability
App for Teams Meeting · 6755580531	6 September 2026 Apple archive: Sameen Zaka / 1882648741; bundle com.app.mac.meeting; original icon and promotional images.	US/DE pages unavailable; no app returned by US/DE/PK lookups on 19 November.
Langtalk - Language Lessons · 6761159353	Indexed Apple listing: Sameen Zaka; exact product link embedded in Omie's Link Opener; AppNex policy names Lang-Talk.	US/AU/DE pages unavailable; no app returned by US/DE/PK lookups on 19 November.

VISUAL EVIDENCE

Familiar names deserve a careful visual comparison.

Ask Chat's current white swirl on black can evoke AI-assistant branding, but it has five open arms; ChatGPT's official mark has six interwoven loops. Link Opener's blue chain icon is visibly different from Chrome's multicolour circle. The stronger concerns here are the earlier ChatGPT-led subtitle, the browser-brand title and the privacy disclosures, rather than a claim of identical icons.

Ask Chat · Muhammad Omie

Current Ask Chat icon: five open white arms on black. Apple artwork retrieved 19 November 2026. E3.

Official ChatGPT · OpenAI

Official ChatGPT artwork from OpenAI's mobile listing, used as a brand reference. Six interwoven loops. E10.

Link Opener · Muhammad Omie

Current Link Opener icon: blue tile with a white chain/link design. E4.

Official Chrome · Google

Official Chrome artwork from Google LLC's mobile listing, used as a brand reference. E11.

The same chatbot: robot first, black swirl later

The monitor first saw the app on 13 October 2026, six days after Apple’s release date. It already said Built on CHATGPT & GPT 5.6 API. On 21 October the name and subtitle switched to 6.1. On 14 November its privacy label changed from Data Not Collected to Data Not Linked to You, naming content, identifiers, usage data and diagnostics.

On 19 November the title became Ask Chat: AI Chatbot Assistant, the subtitle became AI Chat Using Top AI Models and the icon changed. The current description explicitly identifies an independent app and denies affiliation with OpenAI. These details matter: the observed sequence is a rebrand, not proof of an innocent original submission followed by an undisclosed review bypass.

Before · robot

Robot artwork reproduced in the supplied before/after dossier. First recorded 13 October; still present before the 19 November change. E1 pp.2,5.

After · 19 November

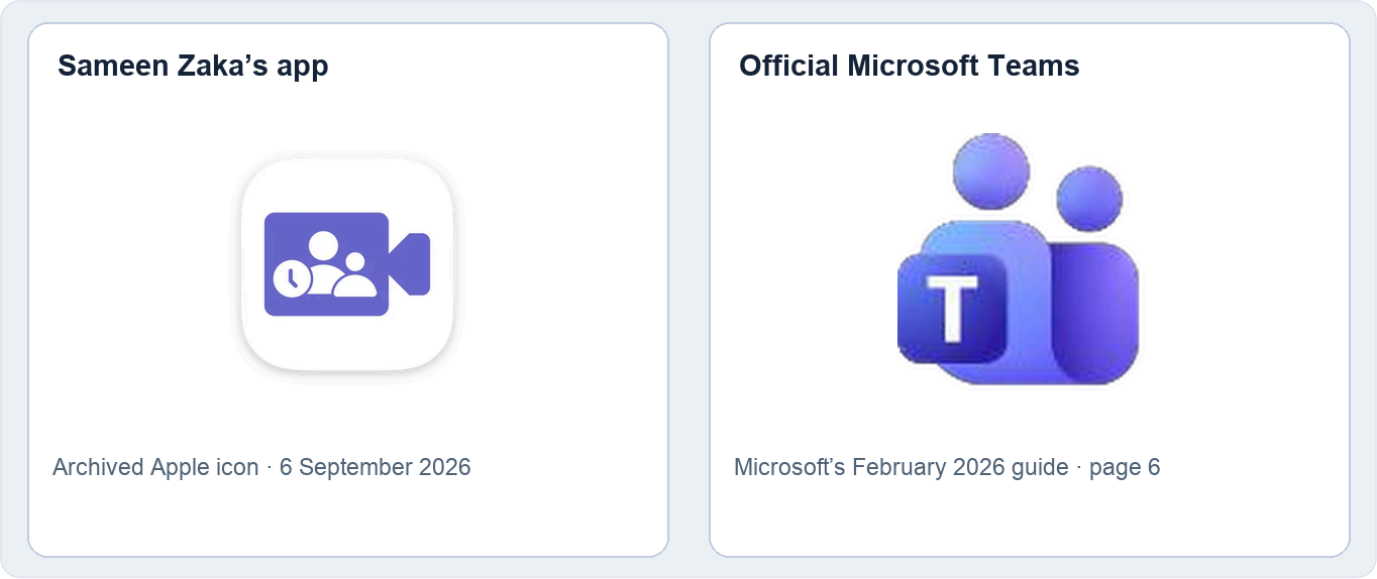

New swirl artwork in the 19 November change record and current Apple listing. Same numeric app ID. E1 p.5; E3.

E1 pp.2–6; E3; E17–E19.

Recovered Teams advertising: the Microsoft logo is right there.

The 6 September 2026 Apple capture identifies App for Teams Meeting as a Sameen Zaka product. The complete first promotional image shown above reproduces Microsoft's Teams name and recognizable T-and-people product logo, while the app is a separately sold meeting companion. This is direct evidence of Microsoft-brand-led marketing, not merely a similar colour.

The app's own icon is different: a purple camera containing two people and a clock. The comparison preserves that difference. The stronger misleading-presentation concern is the combined Teams-led title, prominent official brand in the advertisement and paid independent product. The description also includes an explicit not-affiliated disclaimer. No Microsoft licence or Apple infringement decision was obtained.

Original archived app icon versus Microsoft's official Teams icon in its February 2026 guide. Both use purple/people imagery; the camera-and-clock design differs from the official T-and-people mark. E31; E34.

Inspect the 6 September 2026 Apple archive **Microsoft's contemporary official icon reference · page 6** **Microsoft's brand-use rules**

E31; E34–E36. Official logo reproduction in advertising is distinguished from copying the app icon.

Which Apple rules need review?

The clearest questions concern brand-led presentation and privacy accuracy. These are this report's assessments; an Apple enforcement decision or a trademark owner's permission was not obtained.

App Review Guidelines assessment, checked 19 November 2026

Rule	Conduct to examine	Evidence
2.3 / 2.3.1 · Accurate Metadata	Check the earlier ChatGPT-led subtitle and whether buyers can distinguish paid utilities from the referenced products.	E1; E3–E4; E17–E20
2.3.7 · Names, subtitles and keywords	Examine third-party product names in searchable title/subtitle fields. Relevant compatibility wording must still be accurate.	E1; E4
4.1(b)/(c) · Copycats; 5.2.1 · Intellectual Property	Assess branding and marketing, including the actual Teams logo in Sameen Zaka's promotion. Its app icon differs; permission was not established.	E10–E14; E31; E34–E36
5.1.1(i) · Privacy Policies	Reconcile Link Opener's Data Not Collected label with its analytics component and conditional multi-app policy.	E4; E8; E16; E26

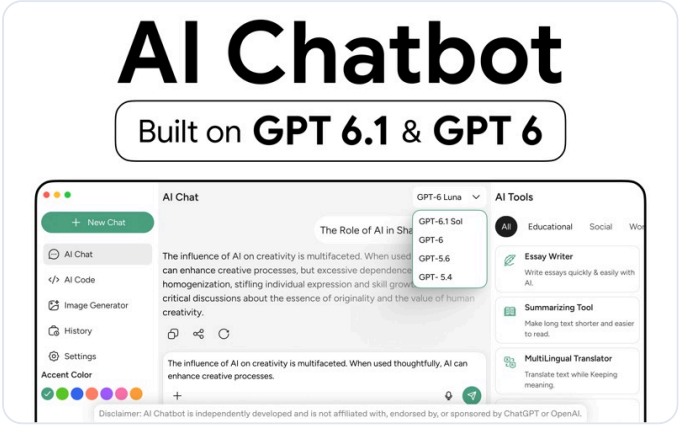

Read Apple's current App Review Guidelines

E14. Subscriptions and native browser compatibility are not automatic violations.

WHAT YOU NEED TO KNOW

The current account, the former apps and the evidence connecting them

01

A current app promotes a product from a now-missing catalog

Omie’s Link Opener includes the exact Langtalk link; indexed Apple pages attribute Langtalk to Sameen Zaka. A recovered Teams archive identifies Zaka’s account as 1882648741. Its known apps are unavailable in checked stores. The reporter alleges a suspended operator returning on a second account; no common-owner or Apple suspension decision was established.

Archived Apple HTML, exact referenced original artwork, current catalog checks and supplied Link Opener binary.

E16 E21 E31 E32 E36 E37 E38

02

The chatbot’s public identity changed after release

On 13 October the monitor recorded Open Assistant 5.6 with a ChatGPT-led subtitle and a robot icon. On 19 November the same app became Ask Chat, removed ChatGPT from the subtitle and adopted the black swirl. The first observation was after release and already used ChatGPT; it does not prove an unbranded launch or a trick that bypassed Apple review.

Dossier pages 2–6; retrieved October/November Apple archives.

E1 E17 E18 E19

03

Chrome and Edge lead the utility’s sales pitch

The title foregrounds two well-known browsers, while the product is a separately sold link-routing utility. Its code contains browser targets and native URL-opening machinery, consistent with that role. A buyer does not receive Google Chrome or Microsoft Edge by purchasing this subscription. The description does include a clear independence disclaimer.

Current Apple description and supplied Link Opener binary.

E4 E16 E20

04

The privacy label needs an app-specific explanation

Link Opener says Data Not Collected, yet its binary contains its own FirebaseAnalyticsManager class and event names for subscriptions, browser choices and searches. The shared policy also discusses Firebase analytics and diagnostics. This is a concrete disclosure-review issue; static inspection does not show whether events were actually sent.

Current listing, signed app metadata and generic policy.

E4 E8 E16 E26

05

Same publisher and signing team, not two separate accounts

Both Apple records name Muhammad Omie and account 6803772100. Both supplied applications are signed by team T3L6X2VDT8. Their Firebase projects differ. This connection is independently supported by the store records and signed binaries.

Exact Apple artist IDs and codesign verification.

E5 E15 E16

WHAT IT COSTS

Weekly subscriptions add up quickly

These are displayed purchase offers, not observed charges. Premium features and benefits may differ between plans. Subscriptions alone do not establish fraud. Ireland supplies the euro comparison; Link Opener's German page shows the same euro prices.

Estimated yearly cost: $363.48 or $259.48

At unchanged weekly prices, estimated yearly spending is $363.48 for Ask Chat and $259.48 for Link Opener. That is about 7.3 and 8.7 times their separately listed US yearly plans. The Irish weekly offers give estimated yearly totals of €415.48 and €311.48.

Illustrative recurring-payment estimate, assuming no cancellation or price change; not an actual charge or an exact calendar-year invoice. E3–E4; Irish listing records.

THE DEVELOPER WEBSITE

A Google Sites homepage and generic legal pages

Both apps use the same /omerapps Google Sites policy and terms. A homepage exists and describes Omie as an independent developer. It does not clearly present these two Mac products, a registered company or a business

country. This weak product-specific presentation is a transparency flag; Google Sites hosting itself is not evidence of fraud or a connection to every developer using that service.

E8–E9; E27; E30. Pages retrieved 19 November 2026. The site's actual hosting spend or plan was not established.

Open the recorded developer website ↗

What the supplied applications reveal

Both are universal Mac applications with Intel and Apple Silicon code. They are sandboxed and can make outbound network connections. Ask Chat additionally requests microphone access and user-selected file access; Link Opener has read-only access to user-selected files. These permissions describe granted capabilities, not proof of misuse.

The complete static inspection covered archive contents, both main executables, signatures, signed permissions, dependencies, property lists, bundled graphics, privacy manifests, compiled strings, class metadata and ARM64 disassembly. The apps were not launched and no purchase, receipt, server login or live prompt submission was performed.

STATIC BINARY EVIDENCE · 19 NOVEMBER 2026

Two apps. One Apple signing team.

Values extracted from the supplied signed applications; both signature-verification commands returned success.

E15–E16. Signed application files, macOS verification output and labeled extraction panels.

Ask Chat sends its AI work through an intermediate service

The executable includes three distinct Amazon API Gateway hostnames, with routes for chat queries, sockets, upload preparation and image generation. Its own error handling and attachment-processing text sit beside these addresses. This is evidence of a configured intermediate service layer, rather than a direct-only connection to OpenAI.

That layer is a meaningful trust point: material sent through it could be processed by its operator before reaching an AI provider. Static inspection cannot establish actual retention, server ownership, a completed transmission or misuse. Firebase is also present for configuration and diagnostics; its presence does not prove that Firebase receives chat text.

A pattern scan of the supplied executable and resource files did not find a private OpenAI/Anthropic key, an AWS access-key identifier or a private-key block. Each app includes one distinct Google API-key value in its Firebase configuration. Firebase client keys are normally project identifiers, not private account credentials. The report does not disclose or use those values.

STATIC BINARY EVIDENCE · 19 NOVEMBER 2026

Ask Chat includes an intermediate server layer.

The supplied executable contains these service addresses beside chat, upload and image-generation routines. Static strings identify configured routes; they do not show a completed network request.

```
Chat / query route
https://25mauxn8t6.execute-api.us-east-1.amazonaws.com/prod/v1/query

Chat / socket route
https://25mauxn8t6.execute-api.us-east-1.amazonaws.com/prod/v1/socket/
wss://w55dlm2ux2.execute-api.us-east-1.amazonaws.com/prod/

Attachment preparation
/generatePresignedURL

Image routes
https://usl6jgeq3c.execute-api.us-east-1.amazonaws.com/dev/images/generate
https://usl6jgeq3c.execute-api.us-east-1.amazonaws.com/dev/images/fetch

Firebase project: chatbot-3-293f4
OpenAI private API key: not found by the pattern scan
```

Source: literal values from the main executable and GoogleService-Info.plist. No endpoint was contacted with an embedded credential. E15.

Static extraction panel showing Ask Chat's configured query, socket, image and upload routes. Route strings are not a captured network exchange. E15.

Configured cloud projects and routes, not a live traffic log

App	Firebase project	Configured service
Ask Chat	chatbot-3-293f4	Custom AWS query/socket/image routes; Firebase configuration
Link Opener	openly-fc3c4	Firebase configuration; browser targets and Google favicon endpoint

Google explains Firebase API keys

E15–E16; E25. No secret-backed endpoint testing.

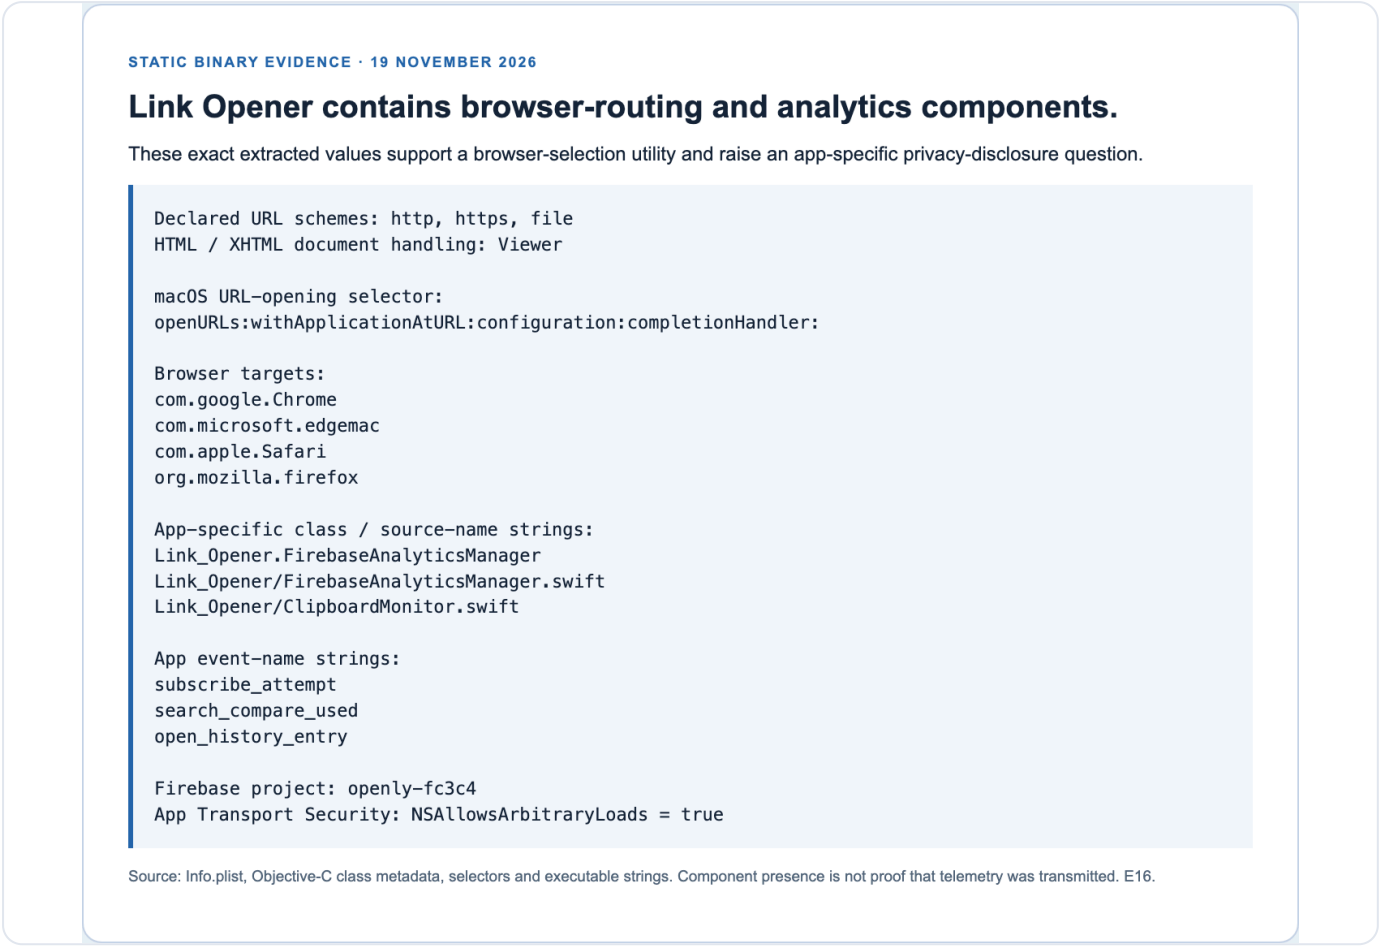

The browser utility has real routing code—and a privacy question

Link Opener registers http, https and file URL handlers and HTML/XHTML viewer roles. It contains native macOS URL-opening machinery, installed-browser identifiers, routing-rule types, clipboard shortcuts, history storage and WebKit search views. This supports the advertised browser-routing role. A native utility can work with Chrome without being a Chrome extension.

The privacy concern is more specific. Alongside Firebase Analytics/Crashlytics code, the app has its own FirebaseAnalyticsManager class and event names such as subscribe_attempt, search_compare_used and open_history_entry. Its App Store declaration says Data Not Collected. The generic policy describes analytics and diagnostics conditionally, without clearly identifying what this particular app sends.

Both GoogleService configuration files contain IS_ANALYTICS_ENABLED = false. That generated field alone does not settle runtime collection; Google documents separate collection-control settings and calls. The app-specific analytics component warrants examination, but no event transmission was observed.

Link Opener also sets NSAllowsArbitraryLoads = true, broadly relaxing App Transport Security. That can permit insecure network requests; it does not prove that any request used unencrypted HTTP. The binary also contains a statement that links stay on the Mac. Actual URL disclosure or interception beyond the selected routing feature was not demonstrated.

Static extraction panel: URL handlers, native opening selector, browser targets, analytics class/event names and broad transport-security setting. E16.

Firebase’s documented Analytics collection controls

E4; E8; E16; E26.

A product link leads to Sameen Zaka’s Langtalk

The Link Opener executable contains the exact Langtalk - Language Lessons App Store URL, app 6761159353, beside a language-learning promotion label. Indexed Apple pages name Sameen Zaka and link to /appnex policies. The current AppNex policy names Lang-Talk. That is a specific product-reference trail; no shared signing team or backend was established for the external publisher.

To reproduce the executable finding, use the supplied file with SHA-256 c77cbf0a2ee110ed23088ef89e0d8c0ee77ce7645f0f0228728490530ed405ee. Offsets below are measured from the start of the full universal file, not from the start of an architecture slice. The screenshots near the top show the location and code references; the raw-byte dump below provides a second way to inspect the same data.

The recovered 6 September 2026 Teams Apple page identifies Sameen Zaka’s exact developer profile, 1882648741, and bundle com.app.mac.meeting. Today the public profile still loads, but the US, German and US Mac-specific catalog requests return only the artist record and no apps. A persistent empty profile does not reveal whether the account was suspended, voluntarily withdrawn or affected by another cause.

The Teams listing’s older indexed descriptions link to /nawalstudio; later records and the recovered September archive link to /appnex. NF Studio’s current homepage names Nawal Fatima. That change is a legal-page trail, not proof of an app transfer or ownership of a Nawal Fatima developer account.

The chronology also matters. Omie’s Link Opener release date is 28 August 2026; Sameen Zaka’s Teams app was still listed in the 6 September archive. The accounts therefore have documented overlapping app histories. The evidence does not establish a sequence of suspension followed by creation of the Omie account.

Across 31 distinct previously extracted executables and the recovered configuration files, no Case 7 match was found for the signing team, Firebase projects, distinctive AWS endpoint IDs, bundle IDs or support contact. A banned-account comeback remains an allegation rather than a verified finding.

RAW BYTES · BOTH ARCHITECTURES

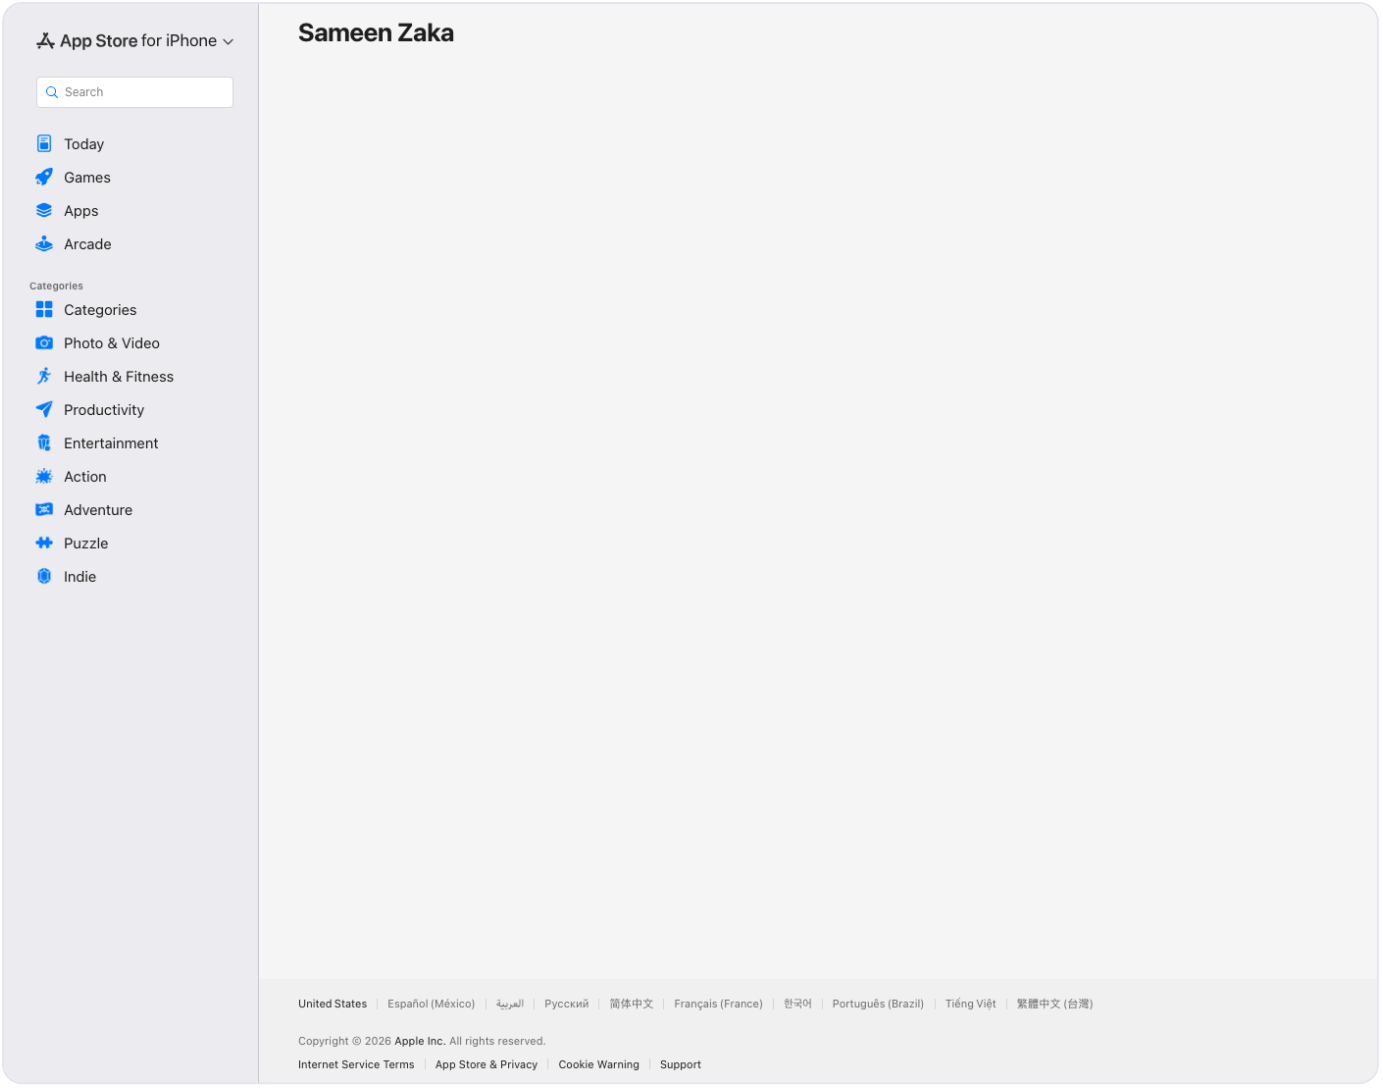

The same link occurs in both compiled builds

Sameen Zaka · exact recovered Apple account 1882648741 Langtalk product link embedded in Link Opener

Indexed Apple Langtalk page naming Sameen Zaka Sameen Zaka's Teams-branded app: currently unavailable in the checked US page

AppNex policy naming Lang-Talk 6 September 2026 archived Teams page

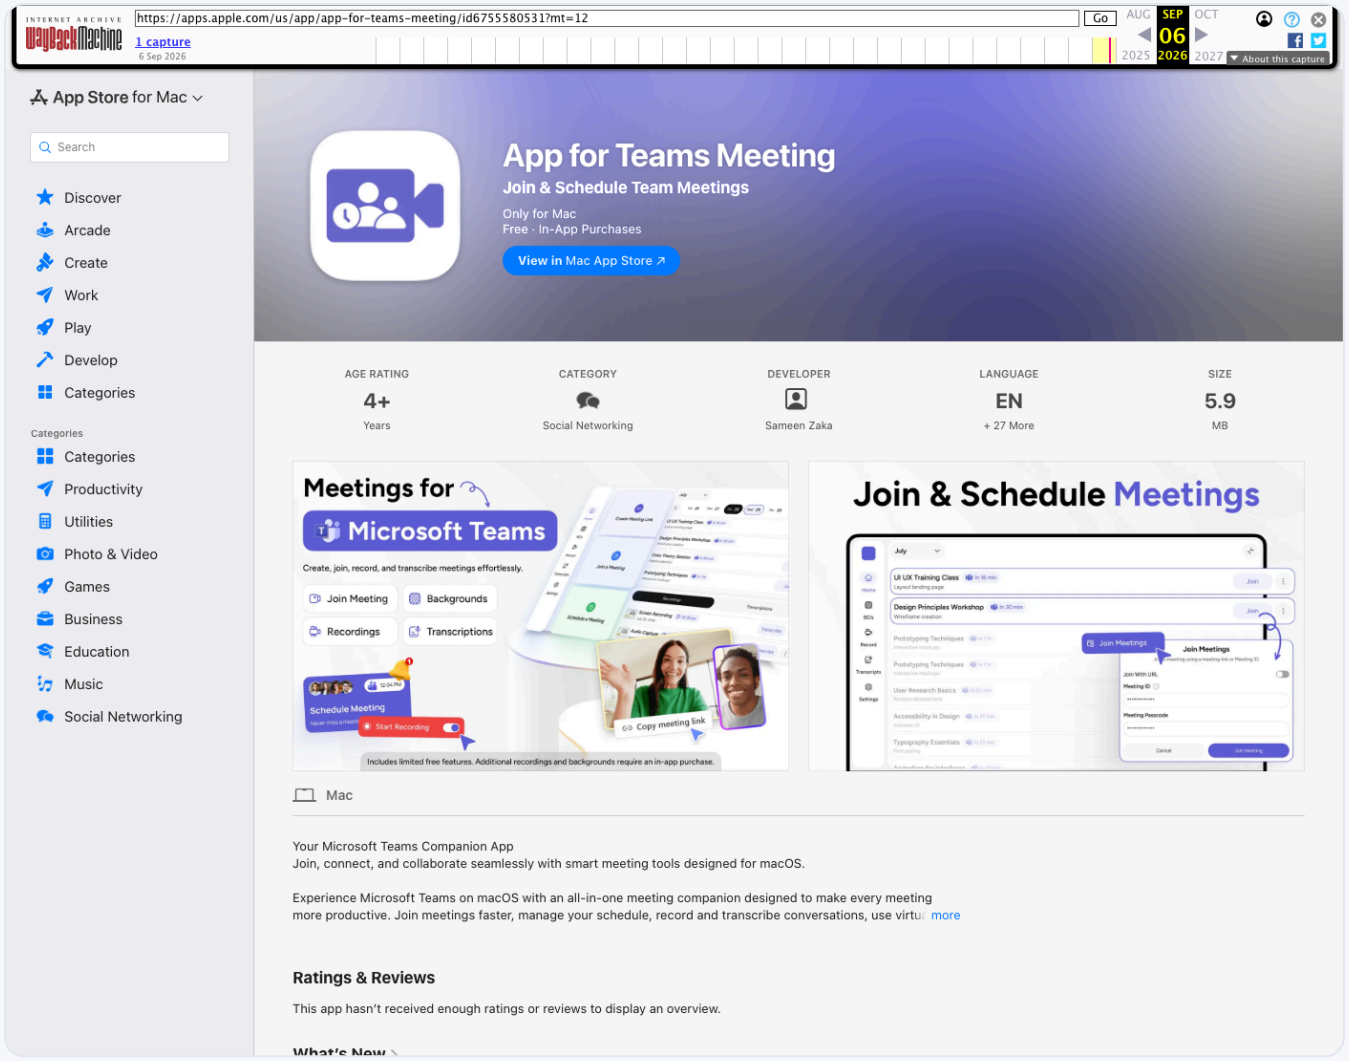

E16; E21–E24; E28; E31–E33; E37. E39.

The archived page ties the artwork to this exact app.

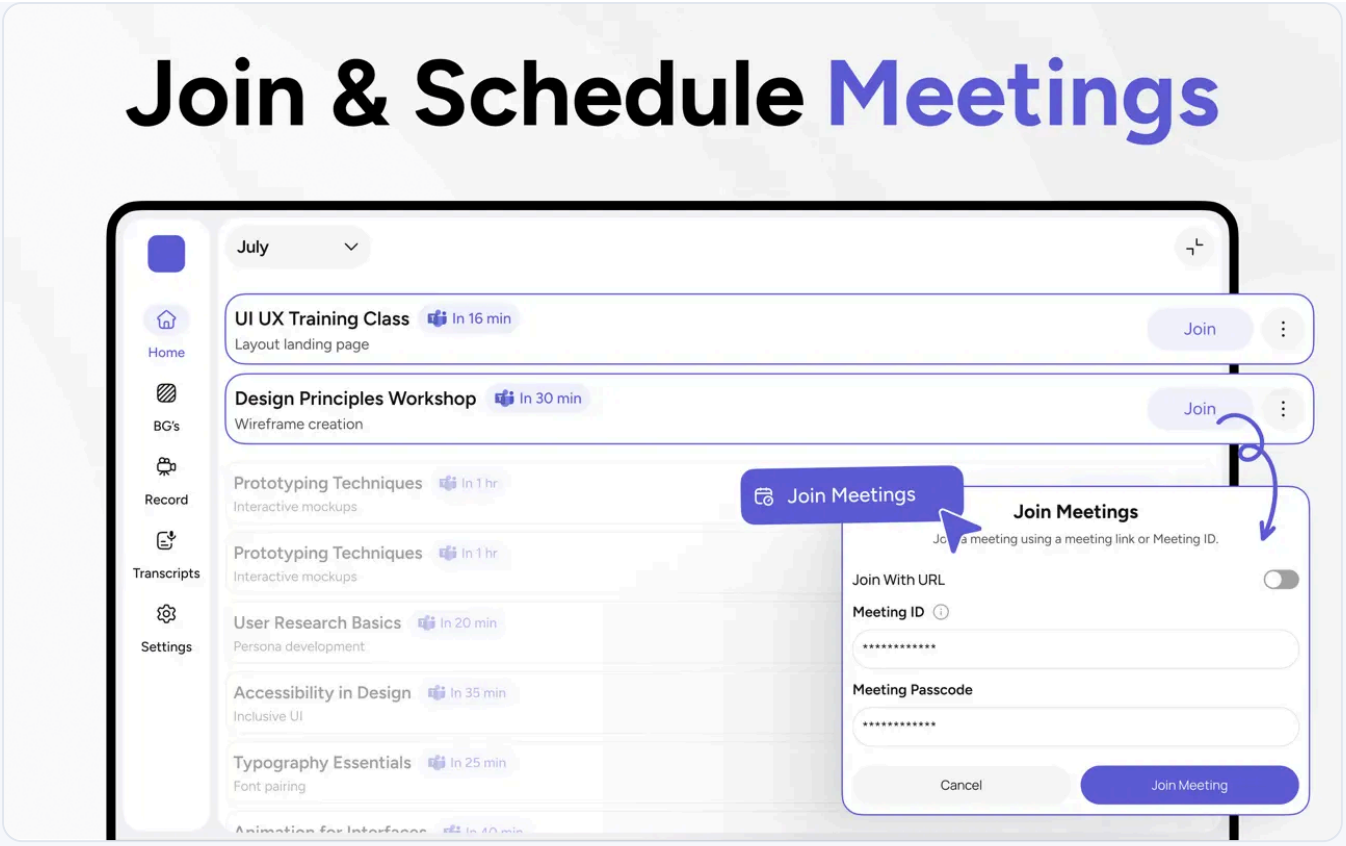

The archive carries app ID 6755580531, Sameen Zaka's exact developer URL and bundle com.app.mac.meeting. The original HTML contains the icon and promotional-image URLs used here. The Wayback view below reloads those exact referenced Apple CDN assets because the archive replay did not load them reliably on its own.

The page was captured on 6 September 2026 at 19:08:30 UTC; the referenced artwork was retrieved on 19 November. These dates have different meanings. The comparison uses Microsoft's February 2026 reference rather than silently substituting today's redesigned Teams icon.

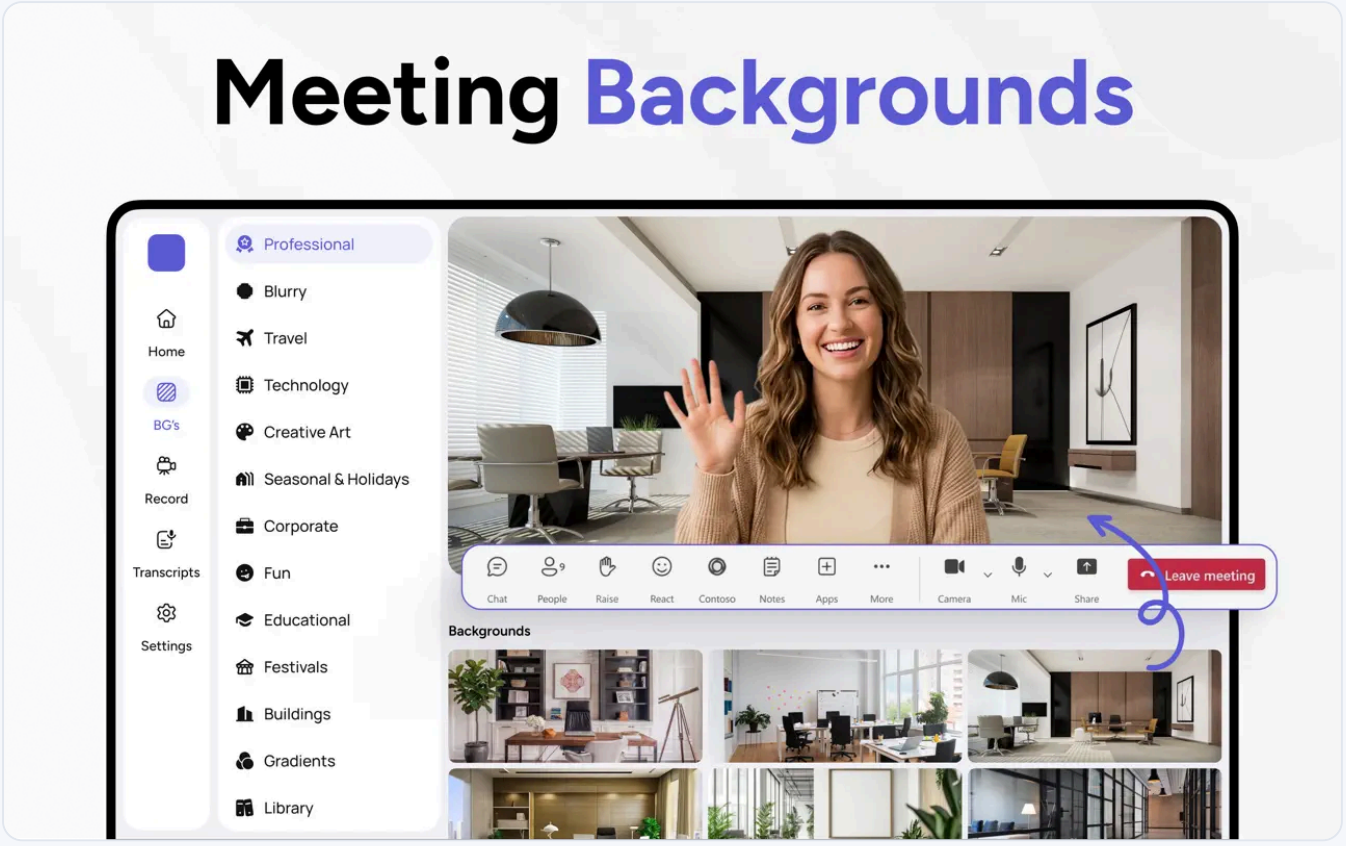

▼ Open the archive view and additional original promotions

Wayback page for app 6755580531, captured 6 September 2026. Exact referenced Apple artwork was reloaded from retained 19 November CDN responses for this rendering; the archive date, app name, developer and marketing are visible. E31; E36.

Second original promotion from the archived Teams listing. E31.

Third original promotion from the archived Teams listing. E31.

Fourth original promotion from the archived Teams listing. E31.

Original app icon referenced in the 6 September Apple page; retrieved from the exact Apple CDN path on 19 November. E31.

Original official Teams icon extracted from Microsoft's February 2026 guide, page 6. E34.

Original archived Apple page

Brand references need to describe the actual relationship

The older Built on CHATGPT subtitle foregrounded the name of OpenAI's consumer product. The current listing instead describes a connection to OpenAI's service and explicitly denies affiliation. OpenAI permits accurate descriptions of API use but prohibits misleading endorsement and limits the way its marks become another product's identity. This investigation did not verify which AI models the server delivers.

Google's brand guidance likewise distinguishes descriptive references from product naming that implies a Google relationship. Link Opener's code supports compatibility with installed browsers, so the concern is the prominence

and overall presentation of Chrome and Edge in a paid utility's identity, rather than a claim that such compatibility is technically impossible.

OpenAI's official brand guidance Google's official brand guidance

E3–E4; E12–E13; E15–E16.

Two purchase details need clearer wording

Ask Chat's current description mentions Lifetime Access, but the retrieved purchase table lists weekly, monthly, yearly and Bi Annually offers without a lifetime price. This is a presentation gap to clarify, not proof that a lifetime purchase was charged or secretly withdrawn.

Bi Annually is the listing's exact label. Its price is shown above without guessing the renewal interval or whether the plan has the same benefits. Link Opener has an explicitly listed lifetime offer. No paywall transaction was completed.

E3–E4; source dossier purchase tables; fresh US/IE records.

A recurring presentation pattern does not identify a country

The combination of recognizable third-party brands, paid premium plans and Google Sites legal pages resembles earlier cases in this publication. Here, the specific identity evidence is Muhammad Omie's one Apple account and matching signing team. The supplied binaries contain no Pakistan-related city or Asia/Karachi literal, and the inspected EU disclosures give no business address.

Search results for similar personal names were excluded because no matching app ID, contact or other direct identity bridge tied them to this publisher. A Google Sites page or a US-East cloud-server location cannot establish Pakistan, a company's country or an individual's nationality.

Earlier report showing a similar Google Sites / brand-led presentation pattern

E6–E9; E15–E16; E28–E30.

THE FULL RECORD

What else changed?

The supplied chatbot monitor reports 15 field-level changes across three updates. Risk labels below reproduce the monitor's categories, not a fraud verdict. The opener supplied analysis is a single observation; no launch-era rebrand is established for it.

E20 / 21 October Link Opener archive

Exact archived Apple HTML successfully retrieved and decoded. Chrome & Edge already appeared in the name. Retrieved HTTP 200.

Open source ↗

SHA-256: f18053785872a1d3cf2e45bb3c0127e1969d04e80286c14f2a972a59d9dc9936

E21 / Langtalk: indexed Apple publisher attribution

Indexed Apple content, crawled last month, names Sameen Zaka and AppNex legal links. Current direct DZ request received 429; this is cached attribution, not a fresh listing or ownership finding. Sameen Zaka's exact profile ID was recovered separately from the archived Teams listing; the Langtalk-to-profile attribution remains based on cached seller identity.

Open source ↗

E22 / Langtalk: current US/AU availability checks

US and AU listing requests returned 404 and exact Apple lookup queries returned zero records on 19 November 2026. No Apple suspension notice or reason obtained. Retrieved HTTP 404.

Open source ↗

SHA-256: 6adada8b947d968309d5b6fab9ebe8b316a80d79c3d1d5e18af1afdaa1f7a704

E23 / AppNex policy explicitly names Lang-Talk

Current Google Sites page names Lang-Talk, third-party AI processing and Firebase services. This differs from Omie's /omerapps policy URL. Retrieved HTTP 200.

Open source ↗

SHA-256: f7c16465a757b18ace63b76b9c41d6acda9abb7c4d94d7b95d339c3b48c58c5d

E24 / Sameen Zaka's Teams-branded app: indexed Apple record

Indexed Apple record names Sameen Zaka. A complete 6 September Apple replay was subsequently recovered (E31), replacing cached-only publisher identification. Current US page is unavailable; no Apple termination notice obtained.

Open source ↗

SHA-256: 3869dcb29cd193686e93772b48a0f94960cc467abafa17fbc1e9b05dfac3d615

E25 / Firebase API-key documentation

Google explains Firebase client API keys identify a project and generally are not secrets. No included key was used to test backend access. Retrieved HTTP 200.

Open source ↗

SHA-256: ee6ac73d4b9dc2c26e979daadf3204340797c9f67ffa66340c5be40d82a91350

E26 / Firebase Analytics collection controls

Official collection controls distinguish bundled SDK/configuration from actual runtime collection. Retrieved HTTP 200.

Open source ↗

SHA-256: 34355f03456445de71ccf7e5816d225311778ea947c2bfd0ad02a7f46409cbc6

E27 / Google Sites service documentation

Google’s hosted site-creation service; original Omie pages also identify Google Sites in the footer. Retrieved HTTP 200.

Open source ↗

SHA-256: 58afc3b4f8e303e4cbdb7ff2c562f48b2994cbee207329bb1ad47be346277a69

E28 / Cross-case binary comparison

31 distinct previously extracted main executables compared with both Case 7 builds for their signing team, Firebase project names, custom AWS endpoint IDs, bundle IDs and published support contact. No matching distinctive identifier found. Scope: supplied local corpus, not every App Store app.

E29 / Prior brand-led Google Sites investigation

Context for the recurring hosting/brand-led presentation pattern. Similar presentation alone does not connect publishers or establish a country.

Open source ↗

E30 / Omie website home

A real hosted homepage is available; the finding is a generic Google Sites presentation, not a nonexistent website. Retrieved HTTP 200.

Open source ↗

SHA-256: 608bcc7d998208b92785994e6448742ef5d9baf0b16f74fffb00f453e526be21

E31 / Recovered 6 September 2026 Teams Apple page

Exact replay HTML decoded and retained. SoftwareApplication author URL gives Sameen Zaka / 1882648741; bundle com.app.mac.meeting. Original header artwork and four promotions recovered from the exact referenced Apple CDN paths. Archive date is 6 September; CDN image retrieval is 19 November. Retrieved HTTP 200.

Open source ↗

SHA-256: 19c6c7550a4b59eadd6b00b1a4de7a111b6ff9dcef575b51a6c0659583a71b23

E32 / Sameen Zaka: live publisher catalog

API returns one artist record and zero software records. US Mac-specific and DE software queries give the same result. A persistent artist record does not establish active or terminated developer-account status. Retrieved HTTP 200.

Open source ↗

SHA-256: 201cccb148f4141960675f26bc265950179c9eb5bb8fecb8607287f05e746c09

E33 / Sameen Zaka: public Apple profile

Public profile successfully retrieved with HTTP 200 using platform=mac; it displays the publisher name with no app cards. Native browser capture also retained. Retrieved HTTP 200.

Open source ↗

SHA-256: 366c9dd7942282872827a6741d932dc3a11e6fcf764250accbc4d6aaf63cbaa2

E34 / Microsoft’s February 2026 product-icon reference

Official Microsoft 365 trademark guide, page 6. Original embedded Teams icon extracted; used as a contemporary branding reference rather than substituting today’s changed icon. Retrieved HTTP 200.

Open source ↗

SHA-256: 20acb3e46285cff97c2c2eb6f8ed0f556b667c90c45d6e49e6bee365c4643727

E35 / Microsoft Trademark and Brand Guidelines

Current official guidance read 19 November 2026 via browser/search retrieval. Descriptive compatibility wording is distinguished from logos, icons and misleading endorsement. Direct command-line request was blocked; no licence status independently obtained.

Open source ↗

E36 / Original Teams promotion referenced by the Apple archive

First promotional image: Microsoft Teams name and recognizable product logo dominate the upper-left area. Artwork itself retrieved 19 November from the exact archived reference. Retrieved HTTP 200.

Open source ↗

SHA-256: 0cdf83d64885a0a29fba6a85dcdae97943ebfaf29da27630b9b8d66029339aee

E37 / Repeated app availability and profile checks

Both exact app IDs absent in fresh US/DE/PK responses; US/DE product pages return 404. The profile has no apps in returned catalogs. These observations do not state an Apple enforcement reason. Retrieved HTTP 200.

Open source ↗

SHA-256: 7f5ce663b726607eae2fde2a6dc438052ac0d1681e636de7cc3377c0bb77e047

E38 / Reporter's account-circumvention allegation

On 19 November 2026 the reporter alleged that the Sameen Zaka account was suspended and the same operator is using the Muhammad Omie account. No Apple termination notice, common signing identity or common-owner record was supplied for that claim. The allegation is attributed and distinguished from the verified product link.

E39 / Langtalk link: independently verified executable offsets and code references

Read-only inspection of Link Opener.app/Contents/MacOS/Link Opener, version 1.0 build 1, bundle com.mo.mac.openly. SHA-256 identifies the executable. Parsed both Mach-O slices and located all three literals in __TEXT,__cstring. Universal-file URL offsets: Intel 0x39eb00; ARM64 0x8d58e0. macOS otool ARM64 instruction references: marker 0x1000813a4; destination 0x1000813c8; interface label 0x100082504, followed by SwiftUI text construction. Screenshots render exact extracted values, selected instruction lines and raw file bytes. No application launch or observed live UI.

SHA-256: c77cbf0a2ee110ed23088ef89e0d8c0ee77ce7645f0f0228728490530ed405ee

App ID 6803772098 · storefronts: US, IE

Summary

App name	Ask Chat: AI Chatbot Assistant
Developer	Muhammad Omie (ID 6803772100)
Seller	Muhammad Omie
Bundle ID	com.mo.mac.chatgpt
App Store link	https://apps.apple.com/us/app/ai-chatbot-open-assistant-6-1/id6803772098?mt=12
Monitored since	2026-10-13 04:03:10 UTC
Snapshots	4 in total, 3 with changes
Brand terms watched	277 terms; found in the name, subtitle, developer, seller or bundle ID of this listing: chatgpt

Risk indicators

• Brand terms in the bundle ID: "chatgpt"
• Brand terms mentioned in the description: google, apple, itunes, chatgpt, openai
• Weekly subscription "Weekly Plan" at $6.99, about $363 a year
• Over a year the weekly plan costs 7.3 times the yearly plan ($363 against $49.99)
• The privacy policy is on a free site builder (Google Sites): https://sites.google.com/view/omerapps/privacy-policy
• The developer account published its first app 83 days ago (2026-08-28)
• Other apps of the same developer account carry brand names: "Link Opener for Chrome & Edge" (chrome)
• Brand terms written in the screenshots: "chrome" in 1 of 6, "linkedin" in 1 of 6
• The provider has not identified itself as a trader on the EU (IE) App Store
• Since the first snapshot (2026-10-13) the listing changed 56%: subtitle, icon, screenshots
• Bait-and-switch pattern on 2026-11-19: the listing changed its name, subtitle and icon; added brand terms

Description

Chat powered by GPT-6.1 Sol, GPT-6.1 Terra, GPT-6.1 Luna, your intelligent AI companion is built to help you work smarter and create with confidence.

This all-in-one AI companion helps you write, create, rewrite, and improve content faster. Generate ideas, write documents, summarize information, improve grammar, and create professional-quality text with the help of advanced AI technology.

Whether you are a student, professional, marketer, or creator, this AI assistant helps you transform ideas into clear and effective writing in seconds.

AI Writing & Content Creation Tools

Create content for any purpose with powerful AI tools:

Essay Writer
Story Generator
Poem Writer

Email Writer
Letter Generator
Cover Letter Creator
Speech Writer
Article Rewriter
Paraphraser
Grammar Checker
Text Summarizer
AI Translator

Academic & Study Assistant

Improve learning and productivity with tools designed for students:

Essay improvement
Research assistance
Topic explanations
Question generation
Study support
Presentation creation

Create better assignments, understand complex topics, and complete writing tasks more efficiently.

Professional Writing Assistant

Create polished business content including:

Business emails
Marketing copy
Proposals
Career documents
Job pitches
Content plans

Make communication clearer and save time on repetitive writing tasks.

Social Media Content Creator

Create engaging content for online platforms:

Social media posts
Captions
Short-form scripts
Marketing copy
Content ideas

Generate creative ideas and improve your online content workflow.

Creative AI Tools

Explore creative features for:

Stories
Poems
Recipes
Character ideas
Creative writing

Writing Improvement Features

Enhance your text with:

Grammar correction
Sentence improvement
Rewriting

Tone adjustment
Content refinement

Key Benefits

Write faster with AI assistance
Generate ideas instantly
Improve writing quality
Create professional documents
Save time on daily writing tasks
Support study, work, and creativity

Premium Access

Unlock advanced AI writing tools with flexible subscription options:

Weekly Plan: $6.99/week
Monthly Plan: $15.99/month
Yearly Plan: $49.99/year

Premium access includes advanced writing tools, AI generation, rewriting, summarizing, grammar improvement, translation, and creative assistance features.

Subscription automatically renews unless cancelled according to the terms of your subscription.

Description

Control, route, and open every link with your preferred browser on macOS.

Open links in Safari, Google Chrome, Mozilla Firefox, Microsoft Edge, Brave, DuckDuckGo, Opera, Opera GX, Vivaldi, Arc, and many other compatible browsers. Choose a browser instantly or create automatic rules to route links where you want.

Explore supported browsers and install them from their official websites. Once installed on your Mac, they can be selected for your link workflow.

Features

• Browser Picker
Choose where any link opens instantly.

• Automatic Link Routing
Create rules to automatically send websites to your preferred browser.

• Browser Profiles
Choose the profile you want when opening links.

• Quick Shortcuts
Open links and switch browsers faster with keyboard shortcuts.

• Compare Search
Compare results from multiple search engines side by side.

• Link History
View and revisit recently opened links.

• Open in App
Open supported links directly in their associated apps.

• Custom Browser Paths
Choose a specific browser installation.

• Launch at Login
Keep the app ready when your Mac starts.

• Custom Appearance
Personalize themes and accent colors.

• Privacy Focused
Your link workflow stays local on your Mac.

Pricing

Weekly: $4.99
Monthly: $12.99
Yearly: $29.99

Appendix — the privacy policy linked from the listing as displayed

Full-page browser capture of https://sites.google.com/view/omerapps/privacy-policy, taken 2026-11-19 12:26:49 UTC. Cookie-consent overlays (the host's, not the page's content) were hidden before the capture, and Google pages were opened in English.

Last Updated: November 4, 2026

My name is **Omie**, and I independently develop mobile applications designed to provide useful features and practical digital experiences. I value your privacy and aim to be transparent about how information may be handled when you use my applications.

This Privacy Policy explains what information may be processed, how it may be used, when it may be shared, and what choices you may have regarding your information.

1. Information Related to App Usage

Depending on the application and the features you choose to use, the following information may be processed:

- **Contact Information:** If you email me for support, I may receive your email address and any information you include in your message.
- **Technical Information:** Device model, operating system, app version, and other technical details may be processed to support compatibility and troubleshooting.
- **App Activity:** Usage statistics, session information, and feature interactions may be collected through analytics tools.
- **User-Provided Content:** Text, prompts, images, documents, or other files you choose to submit through app features may be processed to provide the requested functionality.

The information handled may vary between applications. Not every app collects or processes every category listed above.

2. How Information Is Used

Information may be used for the following purposes:

- Providing and maintaining application features.
- Processing requests submitted through AI-powered tools.
- Improving application performance and usability.
- Identifying errors, crashes, and technical problems.
- Understanding how users interact with application features.
- Responding to questions, feedback, and support requests.
- Maintaining application security and preventing misuse.

I do not sell or rent personal information to third parties.

3. AI Features and User-Submitted Content

Some of my applications include AI-powered features that rely on external AI providers. When you use these features, the content you submit may be transmitted to the relevant provider for processing.

This may include prompts, questions, text, images, documents, or other content required to complete your request. Please avoid submitting sensitive or confidential information unless you are comfortable sharing it with the relevant service provider.

AI-generated responses may not always be accurate, complete, or suitable for every purpose. I do not guarantee the accuracy, reliability, or suitability of generated content.

4. Third-Party Services and Technology Providers

To support application features and technical operations, I may integrate services from other providers. Their involvement depends on the features available in each application. Only services actually used by a particular application apply to that application.

OpenAI Services

Some applications may use OpenAI services to process AI requests and generate responses. Content submitted through these features may be shared with OpenAI for

processing.

OpenAI Privacy Policy: https://openai.com/policies/privacy-policy/

Perplexity Services

Certain applications may use Perplexity's AI and search capabilities. Information submitted through these features may be transmitted to Perplexity to provide answers and search results.

Perplexity Privacy Policy: https://www.perplexity.ai/hub/legal/privacy-policy

Google Maps Services

Applications that provide mapping, navigation, location, or place-related features may use Google Maps services. Information processed through these features may be handled by Google under its privacy practices.

Google Privacy Policy: https://policies.google.com/privacy

Supported Browser Services

Some applications may work with or open supported browsers, including Safari, Google Chrome, Mozilla Firefox, Microsoft Edge, Brave, DuckDuckGo, Opera, Vivaldi, Arc, and other compatible browsers.

Browser providers may process information independently under their own privacy policies. My applications are independently developed and are not affiliated with, endorsed by, or sponsored by these browser providers.

Firebase Analytics

Firebase Analytics, provided by Google, may be used to understand application usage and feature engagement. It may process device or app identifiers, session activity, interactions, device information, operating system, and app version. This information helps me understand how users interact with application features.

Firebase Crashlytics

Firebase Crashlytics, provided by Google, may be used to identify crashes and diagnose technical issues. It may process crash reports, diagnostic information, device details, operating system information, app version, and relevant device or app identifiers to help improve application stability.

For Google's general privacy practices, visit:

Google Privacy Policy: https://policies.google.com/privacy

5. Information Sharing and Disclosure

I do not sell or rent personal information. Information may be shared with third parties when reasonably necessary for purposes such as:

- Providing features you choose to use.
- Operating analytics, diagnostics, and technical services.
- Processing AI requests through integrated providers.
- Meeting legal obligations or responding to valid legal requests.
- Protecting application security, users, and legal rights.

Third-party providers may process information according to their own privacy policies, terms, and data-handling practices.

6. Data Storage and Retention

Information is retained only for as long as reasonably necessary to fulfill the purposes described in this policy or to meet applicable legal requirements.

Retention periods may vary depending on the type of information, the application, and the third-party service involved. External providers may maintain their own storage and deletion practices.

7. Your Privacy Choices and Rights

Depending on your location and applicable laws, you may have rights regarding your personal information, including the right to:

- Request access to your personal information.
- Request correction of inaccurate information.
- Request deletion of your information where applicable.
- Ask questions about how your information is handled.

You can contact me using the email address provided at the end of this policy to submit a privacy-related request.

You can also choose whether to use optional features that require submitting content to external services. Some information may need to be retained where required by law or legitimate operational requirements.

8. Children's Privacy

My applications are not intended for children under the age of 13, and I do not knowingly collect personal information from children under 13.

If you believe a child has provided personal information through one of my applications, please contact me so I can review the matter and take appropriate action.

9. Data Security

I take reasonable measures to protect information handled through my applications against unauthorized access, misuse, alteration, or disclosure.

However, no online service, electronic transmission, or storage system can be guaranteed to be completely secure. I cannot guarantee absolute security of information.

10. External Websites and Services

My applications may contain links to external websites, platforms, or services. When you visit or interact with an external service, its own terms and privacy policy apply.

I do not control and am not responsible for the content, security, or privacy practices of third-party websites and services. I recommend reviewing their privacy policies before providing information.

11. Application Availability and Feature Changes

Application features, integrations, and supported services may change over time. I may introduce, modify, restrict, or discontinue individual features when necessary due to technical requirements, provider changes, maintenance, or other operational considerations.

If a feature relies on an external provider, its availability may also depend on that provider's services, policies, and technical requirements.

12. Application Suspension, Termination, and Discontinuation

I reserve the right to suspend, restrict, modify, or discontinue any application or its features when necessary for maintenance, security, technical reasons, legal requirements, or other operational considerations.

If an application is discontinued, access to some or all of its features may no longer be available. Information handled in connection with the application will remain subject to this Privacy Policy and applicable data-retention requirements.

13. International Data Processing

Some third-party providers may process information on servers located in countries other than your own. As a result, information submitted through certain application features may be transferred internationally and handled according to the applicable laws and privacy practices of those providers.

14. Changes to This Privacy Policy

I may update this Privacy Policy to reflect changes in application functionality, technology providers, legal requirements, or information-handling practices.

Any revised version will be published on this page with an updated Last Updated date. I encourage you to review this page periodically to stay informed about how information is handled.

15. Contact the Developer

If you have questions about this Privacy Policy, your personal information, or a privacy-related request, you can contact me directly.
