

TradingView-style branding. A different seller. A separate bill.

TradingView is one brand name built from Trading and View. This developer separates those same words with Chart and pairs them with a close imitation of the official icon—an abuse of TradingView brand recognition in App Scam DB's assessment. Its separate \$5.99 weekly subscription has an estimated annual cost of \$311.48. Five apps share its Apple account, and public support-site configuration connects it to Hoorain Fatima / AppVortex without establishing common legal ownership.

VISUAL EVIDENCE

The T, circle and diagonal stroke closely imitate TradingView

Original Apple-hosted icons, checked 30 October 2026. The investigated app retains the chunky white T, white circle and diagonal white bar on black, but moves the circle to the far right and reverses the bar's slant. Official TradingView places the circle between the T and rising diagonal. App Scam DB assesses this as a close visual imitation with altered details; the files are not pixel-identical.

01

Splitting TradingView into Trading and View exploits brand recognition

The official TradingView brand combines Trading and View into one name. Trading Chart View & Insights separates those same elements with Chart and pairs them with a closely imitated icon. App Scam DB assesses this as abuse of the official brand's recognition that risks misleading users searching for TradingView. Internal keywords and ranking effects were not measured.

TradingView split into Trading and View: exploiting the official name

The investigated icon is a close imitation of TradingView's distinctive black-and-white T/circle/diagonal composition. It keeps the thick T but moves the circle to the upper right and reverses the diagonal stroke. This is more specific than simply using a finance chart or a black background. The original icons are distinct assets; no pixel-identical or copied-code claim is made.

TradingView is written as one brand name, combining the words Trading and View. The developer names its app Trading Chart View & Insights, separating those same recognizable elements with Chart. Paired with the closely imitated black-and-white symbol, this exploits recognition of the official TradingView name while using a different title. App Scam DB assesses the

combined presentation as abuse of brand recognition that risks misleading people searching for TradingView into choosing a separately published and billed app. This assessment concerns the public name/icon pairing; the developer’s internal keywords and actual effects on App Store rankings were not measured.

The official App Store reference names TradingView as developer and TradingView, Inc. as seller. This Mac app names Sami Ullah Zia Subah Sadiq Javaid. No explicit TradingView independence disclaimer was found in its retrieved description. Its financial disclaimer concerns accuracy and investment advice, not publisher affiliation.

The first advertisement contains a small TradingView attribution mark inside the displayed chart. TradingView supplies embeddable charts and widgets, so the presence of its chart UI or attribution alone does not prove unauthorized use. It also does not establish permission to mimic its app icon or imply official status. The app was not installed and no licensing agreement was obtained.

Five apps are directly linked to this seller

The live Apple catalog and exact-ID lookup establish one developer account spanning three Mac titles and two iPhone/iPad titles. Every bundle identifier uses com.appslogic. The shared AppsLogic copyright and repeated legal URLs reinforce an already direct account link.

The earliest current portfolio release is Brushes | Fonts for Procreate in November 2024. That is a release date, not proof of when the developer account was opened. Procreate appears in a resource-pack title; that alone does not establish that the app impersonates Procreate. Orbix’s GPT model subtitle is also recorded as marketing, without claiming its integration was tested.

The current catalog does not establish a previous account ban, replacement identity or relationship to developers in earlier App Scam DB reports. The separate AppVortex connection rests on public site configuration rather than name similarity, as detailed next.

E6, E7, E13-E16, E29, E31.

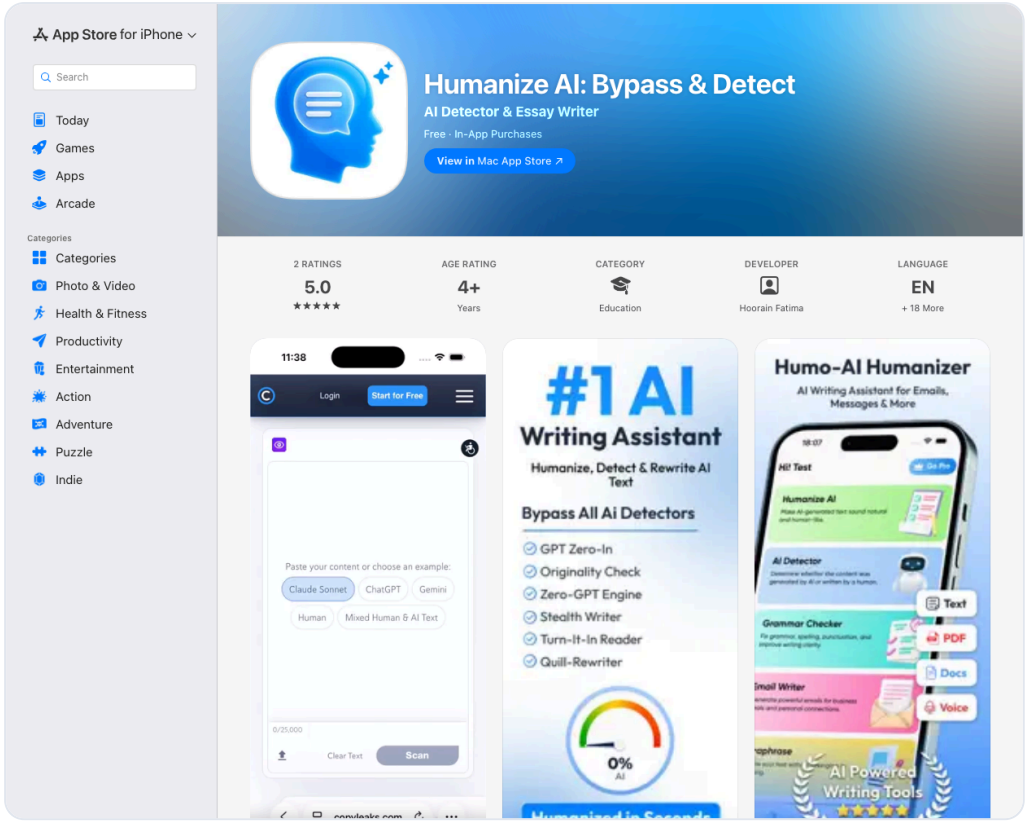

A concrete infrastructure link to Hoorain Fatima / AppVortex

The Apps Logic support page's public JavaScript selects a Firestore database named humo-ai-humanizer. Following that specific product clue led to Humanize AI: Bypass & Detect, app 6760720289, published by Hoorain Fatima under a different Apple developer ID, 1880748304. Its listing links appvortex-pi.vercel.app, whose privacy policy explicitly refers to Humo.

Inspection of both public support-page sources found the same Firebase project, authentication domain and storage bucket. Both scripts select the named humo-ai-humanizer database and contact_messages collection. This is substantially more specific than sharing Vercel hosting or a generic form design: both pages are configured to send support messages to the same logical destination.

The finding establishes shared published configuration and contact-form code. It could reflect shared development, copied site code or access to common support infrastructure; it does not independently prove who owns either Apple account or that the configured backend is operational. No form was submitted, Firebase API queried, authentication attempted or database content accessed.

The Hoorain Fatima catalog also lists AI Design Maker: Craft Space and Designs For Bambu Lab 3D. These are portfolio context for the second account, not additional findings of fraud or confirmed brand copying. No family relationship, account transfer or ban-evasion link was established.

Original Apple listing viewport, app 6760720289, captured 30 October 2026. E17. Same-name product clue corroborated by the linked AppVortex site configuration.

Apps Logic support page AppVortex support page Hoorain Fatima developer catalog

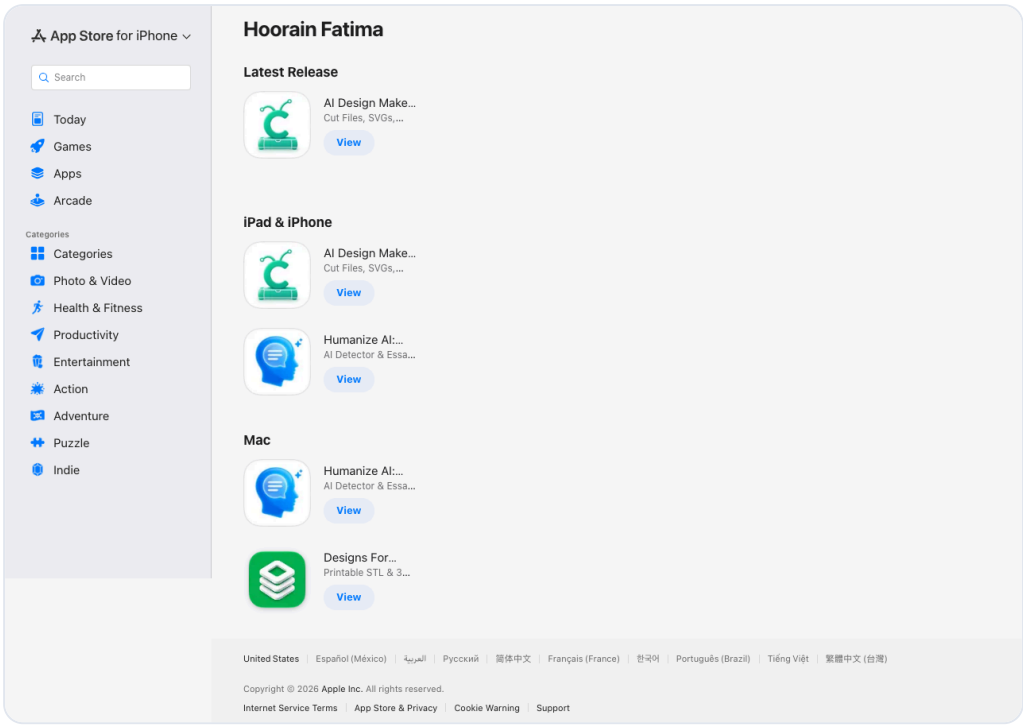

E8, E17-E20, E29. Only public website source was inspected.

The other account: three distinct apps under Hoorain Fatima

Apple developer account 1880748304 currently lists three unique apps. Humanize AI: Bypass & Detect appears in both the iPhone/iPad and Mac sections, but its numeric app ID is the same and it is counted once. All three exact app records identify Hoorain Fatima as the developer.

Humanize AI is the app that directly links the AppVortex website used for the support-source comparison. The other two titles are directly associated through the same Apple developer account, rather than merely through similar names or hosting. This portfolio listing is identity context: it does not independently establish that either additional app infringes a brand, is fraudulent, or shares an operator with Apps Logic.

The bundle identifiers below are reproduced exactly from Apple lookup. First-release dates are app dates, not developer-account creation dates. These related portfolio apps are not additional primary subjects in country statistics.

Original Apple catalog capture, 30 October 2026. Three distinct app IDs; the repeated Humanize AI entry represents the same app on different platforms. E20.

Hoorain Fatima – Apple developer ID 1880748304

Current app	App ID	Catalog platforms	First release (UTC date)	Bundle identifier
Humanize AI: Bypass & Detect	6760720289	iPhone/iPad and Mac	2026-04-13	com.humanizer.ai
AI Design Maker: Craft Space	6759801237	iPhone/iPad	2026-07-22	com.cricut.ai.design.studio
Designs For Bambu Lab 3D	6815242255	Mac	2026-10-21	com.bambulab3d.designs

[Designs For Bambu Lab 3D](#) - [App Store](#)

The second account’s business country could not be established

All three Hoorain Fatima apps were checked in both Germany and Ireland. Every obtained provider panel says Hoorain Fatima has not identified itself as a trader. None of these six panels supplies a business address or country. This is a disclosure result, not evidence that the apps are unavailable or that Apple removed an account.

The AppVortex support homepage, linked privacy policy and terms do not identify a business jurisdiction, registered legal company, company number or business address. The terms contain usage, prohibited-conduct and warranty sections, without a governing-country clause. No registry entity could be linked to this Apple account through a legal identifier.

Exact-name searches returned several distinct professional and social profiles in Pakistan. None was corroborated by this account’s numeric developer ID, app IDs, linked domain or a matching legal business record. Assigning those people’s location to the Apple developer would conflate namesakes. The shared Firebase configuration with Apps Logic is a technical connection, not a geographical one.

The second account’s business country therefore remains Unknown for this investigation. No country has been inferred from a name, language, storefront availability, infrastructure hosting or a namesake profile. This related-account check does not add its apps to the primary-country statistics for the Trading Chart View report.

Hoorain Fatima - country disclosure across all three apps

App	App ID	Germany	Ireland	Business country
Humanize AI: Bypass & Detect	6760720289	Non-trader; no country	Non-trader; no country	Unknown
AI Design Maker: Craft Space	6759801237	Non-trader; no country	Non-trader; no country	Unknown
Designs For Bambu Lab 3D	6815242255	Non-trader; no country	Non-trader; no country	Unknown

E18, E19, E35-E42. Six live EU provider checks and public website/legal research, 30 October 2026.

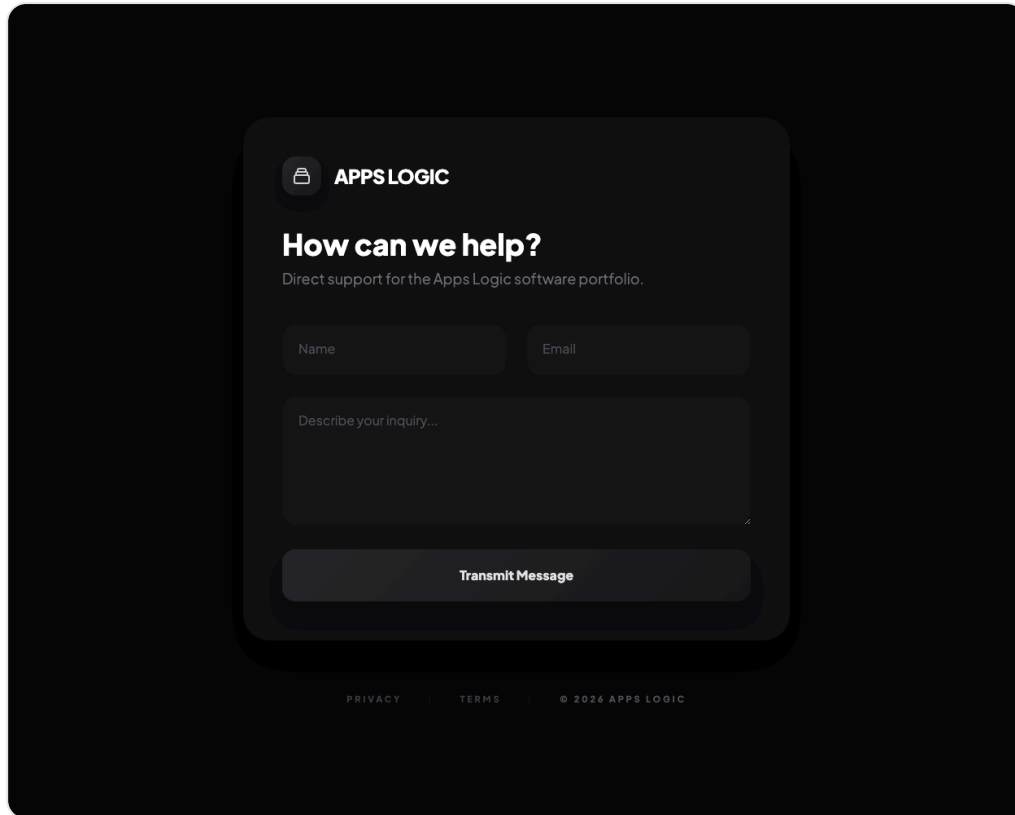

A broken terms link, a working fallback and a generic support site

The app description sends users to <https://appslogic.vercel.app/terms>. That exact URL returned HTTP 404. The support homepage instead links </terms.html>, which returned the complete terms. The report therefore identifies a broken listing link, not an absence of all terms.

The support page is a functioning form with Apps Logic branding and privacy/terms links. Its visible body does not provide a company registration number, named business jurisdiction or an app presentation/catalog. Vercel offers free and paid hosting; the hostname does not identify the developer’s actual plan. Hosting alone is not proof of a scam.

The alternate terms use Apps Logic as publisher and refer to the jurisdiction where it is registered, without naming that jurisdiction. The legacy Blogger privacy page, still linked by Brushes, retains the literal placeholder [insert contact information]. These weaken accountability but do not establish a false identity.

The copyright/name AppsLogic also appears on unrelated agency and company search results. No matching account identifier, contact domain or legal registration links those businesses to this seller. Name-only academic records were likewise excluded; a name match is not enough to identify the developer or assign a country.

Original support-page viewport captured 30 October 2026. No message was entered or sent. E8.

E8-E13, E29-E31.

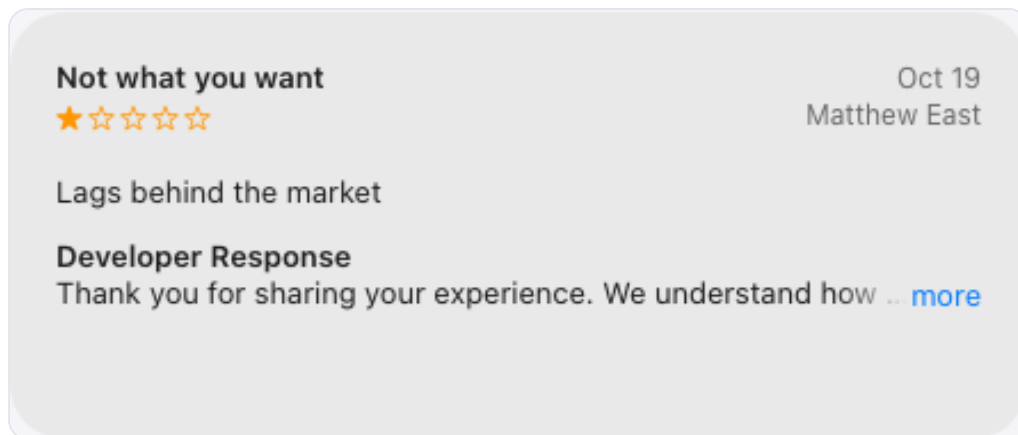

The no-collection label needs an app-specific explanation

The Apple label says Data Not Collected. The current shared policy says Apps Logic may collect usage statistics, crash reports and device information, and may process inputs locally or via secure servers. It names Firebase and describes transient processing rather than permanent storage of private input text.

The listing advertises screenshot-based AI chart analysis, follow-up questions and stored analysis history. The policy does not identify the chart-analysis provider or clearly explain whether uploaded chart images, prompts, technical records and analysis history remain on-device, are retained by third parties, or fall outside the no-collection label.

An apparent disclosure gap is not a measured data leak. Apple distinguishes retained off-device collection from real-time-only processing; narrowly defined optional-support disclosures can also be exempt. The relevant issue is which conditional policy practices actually apply to this app, not an automatic conclusion that every server request makes the label false.

The visible US reviews include a complaint that market data lags and a complaint about access. Other visible reviews are positive. The developer replied to the lag complaint that an update was awaiting approval. Those are user/developer statements, not independent measurements of data latency, proof of affiliation confusion or proof of fabricated reviews.

Original native Apple review-card capture, 30 October 2026. Review dated 19 October; the developer's visible reply discusses a pending update. Statements are attributed, not independently tested.

E2, E9, E25.

Non-trader disclosures leave the business country unknown

The German and Irish listings both say the provider has not identified itself as a trader. Neither obtained panel supplies a country or business address. The public support/legal bodies and Blogger profile did not establish an account-linked business jurisdiction. Country is recorded as Unknown; names, language, hosting and unrelated search profiles are not used as substitutes.

Apple lookup dates the primary app's first release and version 1.0 to 13 August 2026. The supplied monitor began on 29 October and reports no observed changes. Archive-index queries revealed listing captures dated 15 and 29 October; the opened earlier replay shows the same title, subtitle and seller. Historical image pixels were not separately verified, so the report does not present the current icon as a proven launch icon.

The 15 October support replay and the 29 October policy replay were also opened. No generic launch followed by a later TradingView-branded transformation was established. The source monitor's single snapshot, release date and independent archive dates are kept separate.

E1, E3-E6, E26-E31.

The combined branding warrants an App Store review

Apple's accurate-metadata rules 2.3 and 2.3.7, artwork-rights rule 2.3.9, copycat rule 4.1 and intellectual-property rule 5.2.1 are relevant to the distinctive icon composition and confusingly familiar name. TradingView's terms assert rights in its materials and describe licensed/attribution uses. No brand-owner permission or enforcement decision about this app was obtained.

TradingView's specific restrictions on confusing application names and purchased trademark keywords appear within its referral-program rules. No evidence shows this developer participates in that program, so those clauses are not presented as an independently established contractual breach. The branding assessment instead rests on the observed presentation and Apple's relevant rules.

Privacy rule 5.1.1 is relevant to the unexplained app-specific collection practices and legal-link mismatch. The app itself discloses that AI output may be inaccurate and is not financial advice. The supported result is a direct branding, billing and disclosure warning, not a verified financial-loss, malware or unauthorized-charge finding.

E25 / Apple App Privacy Details

Retrieved 2026-10-30T05:52:57.645Z; HTTP 200. Collection definition, third-party partners, real-time-only processing and optional-disclosure exceptions checked.

[Open source ↗](#)

E26 / Earlier listing archive - 15 October

Retrieved 2026-10-30T05:54:04.578Z; HTTP 200. Replay opened HTTP 200. Same name/subtitle and seller visible. Does not establish a neutral launch or provide a separately verified historical icon comparison; replay assets may not preserve historical pixels.

[Open source ↗](#)

E27 / Website archive - 15 October

Retrieved 2026-10-30T05:54:04.579Z; HTTP 200. Replay opened HTTP 200. Apps Logic support presentation visible; no earlier corporate identity established.

[Open source ↗](#)

E28 / Privacy archive - 29 October

Retrieved 2026-10-30T05:53:27.162Z; HTTP 200. Requested timestamp redirected to actual capture 20261029194112; final replay URL recorded. Body resembles the current July-dated policy.

[Open source ↗](#)

E29 / Archive index and wider operator research

Checked 30 October 2026. CDX exact URL returned 15 and 29 October listing captures; legacy and app-ID wildcard queries returned no additional records. Supplied 29 October replay also opened successfully. Exact seller/namespace/domain/code-identifier searches and local case comparison performed. No separate common-owner proof established; name-only academic/company matches excluded.

E42 / Second-account country and identity research

30 October 2026. Searched exact developer name, developer ID 1880748304, AppVortex name/domain, app IDs and bundle identifiers. Same-name professional/social profiles mentioning Pakistan were found, but none supplied an account-linked app, domain, business identifier or other corroboration. They were excluded as identity evidence. No official registration could be connected to this seller through a legal identifier. Shared Firebase configuration does not establish country.

Appendix A: supplied monitor report

Complete material source-fact transcription in English. The original HTML was supplied in Romanian. This appendix is a translation and factual transcription, not an original historical PDF.

Identity: Trading Chart View & Insights, US app 6796442075. Subtitle: Analyze Forex, Crypto & Etf's.

Seller/developer: Sami Ullah Zia Subah Sadiq Javaid; developer ID 1777819298. Bundle ID com.appslogic.trading.chart.ai. Version 1.0 dated 13 August 2026; free download, listed as available.

Monitoring: one initial snapshot; zero changes and zero changed fields. Tracked from 29 October 2026. Initial evidence time 29 October 2026, 19:37:48 UTC; monitor displays 21:37 local time and last check 21:43. HTML generated 30 October 2026 at 07:49 (UTC+02:00). These are monitor observations, not an app launch timeline.

Irish listing in source: same app/provider name; provider not identified as a trader. No business country supplied.

Automated observations: TradingView named as official comparison, icon 71% and name 50% similarity; \$5.99 weekly, approximately \$311 annually, about 6.2 times \$49.99 yearly. Monitor calls Vercel a free platform, and flags apple/itunes in the description and confluence/zoom in advertisements. These are automated classifications, not independently established legal violations. The displayed comparison strip includes unrelated Zoom, Apple Music and iTunes icons; the correct original TradingView reference is retrieved separately for this investigation.

Source portfolio: five apps. Brushes | Fonts for Procreate (14 November 2024); Axio | AI Logo Maker (13 July 2025); Chat AI: Ask Anything AI Orbix (27 October 2025); Trading Chart View & Insights (13 August 2026); CleanWave: Water Eject (25 August 2026). Source says first release 715 days earlier, two releases in its last 90 days. Source rating counts: Axio 1, the other four 0. Those are monitor counts, not the fresh visible review observations.

Source evidence filename: trading-chart-view-insights_6796442075_2026-10-29_213748_initial.pdf. Source ZIP: trading-chart-view-insights_6796442075_2026-10-29_213748_initial.zip. Neither file was attached. The source PDF SHA-256 is transcribed below and has not been independently verified.

6e2aefd1e61f1575c7f86adc4366d490d58e84ddf32127a4aad0734a3d334f95

The source supplies a US replay dated 29 October 2026, 19:39:16 UTC. It says Irish and privacy-policy archives were not yet listed because Wayback was busy. The independent investigation subsequently opened listing/support/policy replays as recorded in its source register. Source footer refers users to server-side PDF/ZIP evidence; those server files were not accessed in this task.

Appendix B: public support-site connection

Read-only excerpts from the browser-captured HTML of Apps Logic and AppVortex, retrieved 30 October 2026. These public configuration identifiers are not account credentials. API keys and unnecessary configuration fields are omitted. No form submission or database request was made.
